| Subject index to publications..... | 1458 |

PART III.

CHAPTER XXII.

STATISTICS OF STATE COMMON SCHOOL SYSTEMS.

PRELIMINARY REMARKS.

It was not possible at the time of closing the following tables to present in full the statistics of common schools in the United States for the school year 1888-89. The figures which follow are compiled from the most recent information received, about three-fourths of the States and Territories being represented by reports for the year 1888-89. The corrected totals will be given in a future report.

The population heretofore has been given for that June which fell near the beginning of the school year reported; in this report it is given for the June of that calendar year in which the school year reported closed; *i. e.*, if the school year reported is 1888-89, the population is computed for June, 1889. This method is preferable on several grounds, one obvious advantage being that the official census figures of 1890 will now be used in connection with the school statistics of 1889-90, instead of waiting for those of 1890-91. On account of this change, however, the enrollment, expenditure, etc., per capita of population and of school population, as given in this report, *is not comparable with the same data as given in previous reports.* The corrected statistics of previous years are given in the present report, pages 9-31.

The United States census of 1890, in connection with that of 1880, has been used as a basis for computing the population given in the following table (column 3). It therefore very closely approximates the actual population at the epoch given (mainly 1889); the percentages based upon it are probably accurate as far as carried out.

TABLE 1.—*Estimated population and population per square mile; number of pupils enrolled; same compared with the enrollment of the previous year and with the population; all mainly for 1888-89 (the population being given for the close of the school year).*

a Number who have attended school two weeks or more.

b In 1837-88.

c Approximately.

d In 1888.

e Highest number in attendance; no report from Bell County.

f A few counties not reporting are estimated.

g In 1880-87.

h Average annual rate of increase since 1880.

i Average annual rate of increase since 1887.

j General agent's estimate.

Enrollment.—The latest returns of enrollment of pupils in the common schools foot up to 12,291,259, being an increase of 220,903 *over the corresponding returns of one year previous*. The increase in enrollment has been at the annual rate of 1.83 per cent. as against an increase of 2 per cent. per annum reported a year ago and as against an annual increase of 2.17 per cent. in the school population the present year.

The progressive decrease of public-school enrollment since 1870 in the Northern States has already been demonstrated in tables published by this office. It now appears that the movement is still going on. During the current year the school population in the North Atlantic Division increased 1.90 per cent., the enrollment only 0.44 per cent.; in the North Central Division the school population increased 1.73 per cent., the enrollment only 1.66 per cent. In every North Atlantic State in which a school census was taken the school population was found to have increased at a much greater rate than the school enrollment.

In four of the North Atlantic States and in two of the North Central States there has been an absolute decrease in the enrollment. The increase of enrollment in New York has only been 544, against an increase of school population of over 30,000.

The presentation of these facts affords still further confirmation of the relative decline of public-school attendance in the North, in addition to what has been already published.

In the South Atlantic States the increase of school population the past year was at the rate of 2.05 per cent., of enrollment at the rate of 0.21 per cent. per annum. Here the same decline is observable as at the North. Exceptional agencies were at work, however, to bring about the greater part of this decline in Georgia, and it is believed that it will be only temporary. A provision of the so-called Denny law, which was in operation in Georgia in 1888, required an additional enrollment of at least twenty-five pupils in order to establish a school after one had been provided for each race in each district; this had the effect to diminish the number of schools in the country districts; and on account of the unfavorable crops many farmers' children were obliged to work in the fields, which further tended to reduce the enrollment. The provision of the law of Georgia referred to has since been repealed.

The South Central Division shows an increase of enrollment of 4.26 per cent., which is much greater than the rate of increase of the school population, the latter being only 2.42 per cent.

As has been stated, the proportion of population enrolled, as given in column 8, is not comparable with the same quantities in previous reports. For the percentage of population enrolled in previous years, since 1870, see Chapter I.

a Excluding Alaska.*b* This summary embraces only the States tabulated in the same column below.*c* In 1886-87.*d* In 1887-88.*e* Approximately.*f* In 1887.*g* In 1888.*h* Bell County not reporting.*i* A few counties not reporting are estimated.*j* In 1885-86.*k* Average annual rate of increase since 1880.*l* Average annual rate of increase since 1887.

Average daily attendance.—The average number of pupils attending the common schools, according to the returns made to the Bureau, was 8,004,275, there being a total gain of 100,068 over the corresponding reports of a year previous, or at the annual rate of 1.27 per cent. This rate of increase was less than that of the enrollment, 1.83 per cent., which indicates a decreased regularity of attendance.

In fact, the average number of pupils attending for each 100 enrolled was reported last year as 65.7; this year, 65.1.

The number of States showing a decrease of average attendance is remarkable. Six States of the North Central Division—Indiana, Illinois, Michigan, Minnesota, Missouri, and Kansas—report a decrease in average attendance simultaneously with an increase of enrollment. In the States of that division there was a net decrease in average attendance of 40,166; and the average number attending for each 100 enrolled fell from 65 to 62.8; the enrollment itself increased 80,486.

This condition of affairs, especially in Indiana, is anomalous and naturally suggests imperfections in the statistics as reported, especially as all the remaining divisions show an increased ratio of average attendance over the preceding year. Yet the circumstance that so many of the North Central States are affected and participate in this abnormal decline, points to some agency tending to diminish school attendance in that section of the Union not yet brought to the notice of the Bureau.

a Approximately.*b* In 1887-88.*c* In 1888-87.*d* In 1880.*e* Estimated.*f* In 1888.*g* Average increase for two years.

Aggregate number of days' attendance.—This is a fundamental quantity of great value for statistical purposes, which needs to be more generally considered.

The data for directly obtaining it may be found on most school registers. It is only necessary to add up the number of pupils present each day to get the aggregate days' attendance for the year for any school.

The aggregate number of days' attendance of a school for a year divided by the number of days the school was kept during the year, gives immediately the average daily attendance of that school for the year.

Here are two radical quantities of prime importance determined for each school, (1) aggregate attendance in days, and (2) average daily attendance of pupils, which may be consolidated for any number of schools by simply adding up. The city and country schools may be kept distinct, as well as the white and colored schools. When they have been consolidated for a township, for instance, the average number of days the schools have been kept in the townships may be directly obtained by dividing one of these quantities by the other. So for a county or State, and in any classification desired.

How the aggregate attendance was obtained.—The aggregate number of days' attendance, as tabulated in column 2 of Table 5, has been obtained for each State, when not reported directly to the Bureau, by an inverse process, *i. e.*, by multiplying the average daily attendance by the average number of days the schools were kept; this process of evolving a simple quantity from composite ones is obviously the reverse of the natural order, but was the only method that could be pursued in order to obtain it.

The aggregate number of days' attendance upon the common schools of the United States, as obtained by this process of computation, is found to be 1,076,613,716, as given in column 2. This quantity is approximate, but may be considered sufficiently accurate for most purposes.

How the length of the school term was summarized.—The summaries of column 4, Table 5, being the average number of days the schools were kept in the United States and in each of its divisions, have been obtained by the rule given above, *i. e.*, the aggregate days' attendance of the division in question or of the United States has been divided by its average daily attendance.

This method, in effect, gives to each State or other aggregation a weight proportionate to its average number of pupils and not proportionate to its number of schools. The pupil is considered as the unit and not the school, as heretofore. Accordingly the large city schools with their long terms have their due influence in determining the average

school term; one of these schools may count as much as a score of country schools, as should be the case when it is so many times as large. The general effect has been to give the summaries of the average number of days the schools were kept in the present report larger values than previously. Such decidedly urban systems as those of Rhode Island, Connecticut, New Jersey, and the District of Columbia, especially, receive their due weight in making up the average.

There have been some considerable changes in the length of the school term of the individual States, in two cases exceeding twenty days, if correctly reported, and in four others between ten and twenty. The average change for the United States has been an increase of nine-tenths of a day.

TABLE 5.—*Private school enrollment, mainly for 1888-89, compared with the preceding year; also, total enrollment in all schools, public and private, compared with the preceding year, with the private school enrollment, and with the population 6 to 14.*

^a In 1887-88.^b Estimated.^c Average annual rate of increase since 1887.

Private schools.—Statistics of private schools continue of the same meager and unsatisfactory character as heretofore. The following results are deduced from the data reported to the Bureau:

Sixteen States and Territories show an increase of private-school enrollment of 7.10 per cent., the public-school enrollment of the same increased 1.44 per cent., the whole enrollment, public and private, increasing 2.07 per cent.

These results tend in the same direction as those of preceding years, and give additional confirmation to the statement heretofore made that the private schools are growing at a greater rate than the public.

Individual States, such as Vermont, Rhode Island, Illinois, Colorado, Washington, and California, show an opposite tendency the present year, the public enrollment in those States growing faster than the private.

The statistics of private schools are of such varying degrees of accuracy from year to year, however, that conclusions derived from isolated data are open to suspicion, especially if they indicate any retrogression in the Northern States, which should rather be attributed to incomplete returns.

Out of every 1,000 pupils in schools of all kinds, in 21 States and Territories, 97 were private-school pupils, a little less than 1 in 10. The report last year, embracing nearly the same States, was 94 per 1,000. The estimate for the whole of the United States is 84 per 1,000, as shown in Column 8,

| Alaska | | | | | | |

a These summaries embrace all the States and Territories except Alaska. Estimates are made of those not reported.

b In 1887-88.

c The value of school property in Pennsylvania has been overestimated heretofore.

d School buildings only.

e Estimated.

f Schoolhouses and sites only.

g In 1888.

h Average annual rate of increase since 1887.

TABLE 9.—Whole number of different teachers employed, classified by sex, mainly for 1888-89, and compared with the same for preceding year; number of teachers necessary to supply the schools; changes in the teaching force; proportion of teachers who are males.

| State or Territory. | I | | | | | | | Ratio of male teachers to whole number of teachers. | |

a Excluding Alaska.

b In 1887-88.

c Approximately

d Includes State appropriation of \$100,000.

e Included in column 5.

f From State appropriation.

g Includes revenue from all sources except State appropriation.

h In 1885-86.

i Included in column 8.

j Includes some revenue from permanent funds.

k Congressional appropriation.

l No separate data.

m In 1888.

n Including subscriptions.

o Includes local taxes, if any.

p Not reported.

q Includes an appropriation of \$250,000 from State treasury.

r Excluding some tuition fees and subscriptions.

s Poll tax included in "other sources."

t Includes poll tax.

u Includes some miscellaneous revenues.

v Average annual increase since 1887.

TABLE 12.—Showing the amount of school revenue derived from different sources per capita of population 6 to 14 and of average attendance, mainly for 1883-89.

| State or Territory. | Revenue per capita of population 6 to 14. | | | | | Revenue per capita of average attendance. | | | | |

a Excluding the Territories not tabulated below.*b* In 1887-88.*c* Approximately.*d* Included, if any, in "local taxes."*e* In 1885-86.*f* Included in "other revenue."*g* Includes some revenue from permanent funds.*h* United States appropriation.*i* In 1883.*j* Includes subscriptions.*k* Included, if any, in "State taxes."*l* Includes poll taxes.

School revenues.—An attempt has been made in the preceding tables (10-14) to make the classification of revenue more accurate than heretofore.

Care has been taken to give separately whenever possible the revenue derived from permanent funds, so that as now tabulated it amounts to 7.4 per cent. of the total, instead of 5.3 per cent. as given in the Bureau's last report.

The classification of taxes into State and local is involved in uncertainty. No criterion can be adopted that will be applicable in all cases. Taxes pass through all shades of gradation from that levied, collected, and apportioned by the State to the purely voluntary local tax.

These and many other difficulties, including the differences of classification adopted in different States, so that it is impossible to reclassify in conformity with the Bureau's schedule, or with any schedule possessing significance that can be devised, render the tables of school revenues to a considerable degree unsatisfactory; in point of fact, it is not possible to form any tables the summaries of which will be more than fair approximations, except as to the total revenue, which may be and is very accurately given.

TABLE 14.--School expenditures, mainly for 1883-89, compared in part with those of preceding year.

| State or Territory. | Permanent expenditure. | | | Current expenditure for tuition. | | | | | | Other current expenditure. | Total expenditure, excluding payment of bonded indebtedness. | Increase or decrease since preceding year. | Increase or decrease per cent. | Indebtedness paid. |

a These summaries, except that of column 3, include all the States, estimates being made of the few not reported.

b Estimated.

c Including debt paid.

d In 1887-88.

e Included in column 9.

f Including fuel and janitor's wages.

g Includes \$427, 156 expended for schoolbooks and supplies.

h Revenue for "maintaining the schools."

i Included in column 5.

j Includes amount paid for renting.

k Salaries of teachers only.

l In the city of Wilmington only, the expenditure for sites, etc., elsewhere is included in column 9.

m Includes some permanent expenditure.

n Also \$5,046 were expended for evening schools.

a These summaries include all the States and Territories except Alaska and Wyoming. The States not reported in columns 6, 7, 8, and 9 are estimated.

b Approximately.

c In 1887-88.

d Includes fuel and janitors' wages.

e Amount expended for "maintaining the schools."

f Included in the preceding column.

g Including debt paid.

h Some expenditure for sites and buildings is included in "expenses for other purposes."

i Includes some expenditure for sites and buildings.

j In 1886-87.

k In 1888.

l Includes some miscellaneous expenditure.

m Includes balance unexpended.

a In 1886-87.

b This sum includes the value of riparian lands (\$1,089,833) leased at 6 per cent.

c In 1888.

d Not reported.

e In 1887-88.

f About 600,000 acres swamp land.

g 400,000 acres of land.

h 30,000 acres of Chickasaw lands.

i Also 7,000,000 acres of land under lease, estimated to be worth \$20,000,000.

j Also 22,000,000 acres of land. Total value of bonds, land notes, and lands unsold, \$100,000,000.

k Approximately.

l Two counties not reporting.

m This includes land under lease valued at \$4,753,289.

n 79,469 acres of land.

o 531,012 acres of land.

p Includes some local funds.

q School land not yet available.

r 1,715,009 acres of land estimated at \$9,929,902.

s Also 1,361,233 acres of land under lease.

t Also 655,431 acres of land.

u 1,245,728 acres of land.

v Including amount not yielding revenue.

CHAPTER XXIII.

DIGESTS OF STATE SCHOOL REPORTS.

ALABAMA.

[From Report for 1888-89 of State Superintendent Solomon Palmer]

STATISTICAL SUMMARY.

| | 1887-88. | 1888-89. | Increase or decrease. |
|---------------------------------------------------------|-----------|-----------|-----------------------|
| POPULATION AND ATTENDANCE. | | | |

| White teachers in county schools..... | \$21.57 | \$21.14 | D.....\$0.43 |
| Colored teachers in county schools..... | 23.06 | 21.15 | D.....1.91 |
| White teachers in city schools..... | | 53.40 | |
| Colored teachers in city schools..... | | 40.00 | |
| Whole amount paid teachers..... | \$553,753 | \$562,599 | I.....\$8,846 |

According to the school census of August, 1889, there were 522,691 children between 7 and 21 years of age, an increase of 36,702 since the census of 1887; the average annual rate of increase for the two years was 3.76 per cent.

Meanwhile the enrollment increased during the year 1888-89 only 2,915, or 1.09 per cent.; and the school expenditure, \$6,689, or less than 1 per cent. The increase in enrollment and expenditure is not keeping pace with the increase in population. This is progress backwards. During the coming year, however, the State appropriation will be increased by \$100,000; still, the increase of educable children is so rapid that this addition to the school fund will not materially increase the amount apportioned per capita. A substantial enlargement of the school fund will be necessary to provide a sufficient number of country schools and to enable them keep open an average of over three and one-half months.

SIGNS OF PROGRESS.

On this point Superintendent Palmer says: "There is no denying the fact that there is an interest felt in our public-school system never felt before. The system is regarded, as it should be, as one of the prime factors in the material, social, moral, and intellectual advancement of the State. This was evidenced by the act of the last legislature in increasing the direct appropriation from the State treasury by \$100,000. It is shown by the unusual activity of county superintendents in holding county institutes, and by the teachers in their cheerful attendance upon these institutes. It is shown by the demand

of the people for well qualified and specially trained teachers to instruct their children. It is shown by a willingness, never seen before in most counties, to supplement the meager State appropriation. It is seen in all our towns and cities, where spacious school-houses and ample funds are being provided to run the schools continuously from eight to ten months each year. It is seen in the unusually large number of young men and women attending our normal schools to prepare themselves for teaching. It is seen in the interest manifested by the newspapers of the State in constantly keeping before the public the question of education. It is seen in the large attendance of young men and women in our higher institutions of learning, both public and church. Never in the past were the signs more favorable for a general educational advance throughout the State. When we remember that the close of the war found us without any means for the current expenses of running the State government, much less that of the public-school system, our wealth destroyed, our labor system demoralized, our people confronted with the gravest social and political problems that ever confronted any people, that no longer than fourteen years ago our State was groaning under an indebtedness of more than \$30,000,000—more than one-third of all the taxable values, real and personal, owned by her citizens—when we remember that six years ago the State only appropriated \$130,000 direct from her treasury for public schools, we certainly have just cause for feeling that much progress has been made, and that, too, in the face of most formidable difficulties.

"But while much has been accomplished, still more remains to be done. The progress of the past should not only encourage us, but should stimulate us to renewed efforts to make the educational facilities of our State equal to the constantly increasing demands upon it. Illiteracy still abounds, a menace to the State and a blot upon our civilization."

CITIES AND SEPARATE DISTRICTS.

The improvement in city schools is one of the most hopeful signs of advance made in the Southern public-school system. The cities are becoming the educational centers, from which will radiate the influences tending to elevate the standard of all the schools of the State. In Alabama "marked progress," says the superintendent, "is being made in the educational facilities of our cities and towns. In this regard, as might be expected, Birmingham takes the lead. During the past year Powell School has been furnished with an elegant school building at a cost of some \$60,000. A training department for teachers has been added to the high school. Other elegant buildings are being arranged for.

"Selma is building a fine brick public-school building on the site of Dallas Academy, costing \$18,000. Eufaula, Tuscumbia, and New Decatur are each building \$10,000 public-school buildings. Tuscaloosa has just finished a \$20,000 building for her public schools. Gadsden has procured a good building for her public school, which is just organized and gives promise of fine work. And so the good work goes on. Others might be mentioned, and no doubt still others will be heard from next year."

ARIZONA.

[From the Report of Governor Wolfley to the Secretary of the Interior, 1889.]

EDUCATION.

"The school system of Arizona is an excellent one, and is being liberally and fairly carried out. In every part of the Territory children are offered the advantage of free schools.

"The Territory has a Territorial university in process of construction, the portion for the school of mines being now nearly completed. There is also a Territorial normal school that has been established for several years and is doing well.

"Every town and county in the Territory is divided into school districts. The attendance is good, and the teachers employed are fully up to the average of teachers in Eastern public schools."

UNIVERSITY AND SCHOOL LANDS.

"There will be no time in the history of Arizona when these lands can be used with greater advantage for the objects desired and for the benefit of the Territory at large than the present. It is to be hoped that Congress will see fit to permit the Territory, under reasonable restrictions, to control these lands as large as the public surveys are extended over them and as they can be segregated from the public lands. Many of these sections are being now farmed by settlers without paying any revenue to the Territory. I think the right to lease and receive revenue in that way might safely be given."

COLORADO.

NEW LEGISLATION.

School term.—The minimum number of months the public schools are to be kept open has been increased from three to four.

Arbor Day.—The third Friday of April in each year is to be set apart as Arbor Day and to be a holiday in all public schools.

Child labor.—It is made unlawful for any person or corporation to employ any child under the age of fourteen years to labor during school hours, unless such child shall have attended some public or private day school where instruction was given by a teacher qualified to teach in the public schools of Colorado, or shall have been regularly instructed at home in such branches by some qualified person, at least twelve weeks in each year, eight of which at least shall be consecutive; and such child is to deliver to his employer a certificate to that effect signed by the teacher. Any person or corporation infringing this law is to be deemed guilty of a misdemeanor, and fined not less than twenty-five nor more than fifty dollars.

Compulsory attendance.—Persons having control of children between the ages of six and fourteen are required to send them to a public school, or to a private school taught by a competent instructor, at least twelve weeks in each year, at least eight of which shall be consecutive, unless such children are excused by board of school district on account of unfit bodily or mental condition. It is made the duty of school boards to furnish, at the charge of the school fund, necessary clothing for school children, if parents or guardians are unable to do so. Children may be taught at home in such branches as are usually taught in the public schools, subject to the same examination as public-school pupils. The law does not apply in case there is no school taught within two miles by the nearest traveled road.

Any person failing to comply with the provisions of the law shall upon conviction be deemed guilty of a misdemeanor and fined not less than five nor more than twenty-five dollars for each offense.

School directors are to inquire into all cases of neglect to send children to school, and ascertain from the person neglecting the reason therefor, and proceed immediately to secure the prosecution of any offense under the law. Any director neglecting to secure such prosecution within ten days after a written notice has been served on him by any taxpayer in his district, unless the person complained of shall be excused for any of the reasons above stated, shall be deemed guilty of a misdemeanor and fined not less than ten nor more than fifty dollars.

CONNECTICUT.

[From Report for 1888-89 of Charles D. Hine, Secretary of the State Board of Education.]

| Whole number of pupils in private schools..... | 17,179 | 18,269 | I.....1,090 |

ENUMERATION AND ATTENDANCE.

Of the 157,243 children between 4 and 16 years of age enumerated in January, 1889, 127,089 are reported as attending public schools, 18,269 private schools, and 29,425 not attending school at all. The increase in the number of children attending private schools was slightly greater than the increase in the number attending public schools, and of course represented a much larger percentage of increase. Of the 27,335 not attending school, only 2,090 were between 8 and 14 years of age, the period of compulsory attendance. Many of those enrolled, however, attended very irregularly. This evil of irregularity is one of the most serious difficulties the schools have to encounter.

EMPLOYMENT OF CHILDREN.

By recent enactments the employment of children between eight and fourteen years of age is prohibited in nearly all the leading industries except that of agriculture. Thus by removing from parents the temptation to keep their children from school in order that they may earn a few dollars in some manufacturing establishment at a great expense to their future welfare, the laws requiring attendance at school have been materially strengthened. If the children can not be made to contribute to the gain of parents, but must remain at home in idleness, there will no longer be any inducement to keep them from school. The principle is now acknowledged that parents must not be allowed to deprive their children of the education which has been so liberally and freely provided for them, in order that they may gratify their own wishes and inclinations. Those parents who have a due regard for the welfare and improvement of their children will not object to a law provided for their benefit; but when parents are willing to sacrifice their children's interests for the sake of gain, it is time for the authority of the law to intervene to prevent it.

NEW BUILDINGS.

New school buildings have been erected in East Hartford, Glastonbury, New Haven, Cheshire, Naugatuck, Stonington, Bridgeport, Stamford, Torrington, Middletown, and Somers, at an expense of \$188,906. "The town of Windham has conveyed to the State a beautiful site of six acres in the borough of Willimantic. Very careful plans for a building have been made, and the basement walls are now built."

EXAMINATION OF THE PUBLIC SCHOOLS.

The board of education has been carrying on for three years an investigation into the actual results of the public schools. Some of these results were published in the State Report for 1887-88, and attracted widespread attention, disclosing as they did a highly unsatisfactory condition of the primary schools in New London County. The results of

a more particular examination of the graded schools of the same county are contained in the present report; they do not substantially modify the conclusions already reached. Two sets of specimens of penmanship are reproduced in facsimile. They are the work of the pupils of two different schools in the same town, and illustrate most forcibly the difference between good and poor teaching. "The difference," says Mr. Hine, "is wholly in the teaching. In justice to the children it must be said that they are not at fault. They have learned all they could. What is the just verdict upon a system which admits such inefficiency, and upon school officers who knowingly, year after year, not only permit but promote such an imposition upon helpless children?"

"About two-thirds of the teachers have a high-school education, which is a larger proportion than in ungraded schools. This does not appear to make much difference in the quality of the teaching; certainly, at first, no distinct advantage is noticeable.

"The standard for teachers' certificates is generally higher. In a few cases, examinations were conducted with a view to requiring moderate qualifications. In no place, however, is any training or professional skill required as a requisite for teaching. There are districts where no substantial qualification is demanded. Young women without training and education are legally approved and installed in school. They teach as well as they can."

EXAMINATION OF TEACHERS.

The number of persons examined who had applied for State certificates was 347; the number of certificates granted was 52. Hitherto applicants have only been examined to ascertain if they possessed the necessary attainments, but hereafter they will also be examined on the principles and methods of teaching.

TOWN MANAGEMENT OF SCHOOLS.

In 1866 a bill was passed permitting towns to adopt the town system of management of schools. Twenty-two towns are now operating their schools under this system. At the last session of the general assembly a bill nearly identical with the former in its provisions, but *requiring* the schools to be managed under the town plan, was presented.

LOCAL SCHOOL FUNDS.

It is now difficult to ascertain the origin of these different funds, many of them having been granted during the eighteenth century, but it has been ascertained that many of them arose from gifts or bequests of benevolent persons. The whole amount of these funds is now \$282,451, and all the losses since 1800 do not amount to more than \$10,000, in striking contrast with the history of the town deposit fund. About \$175,000 of the whole amount was given before the year 1800, and since the public schools began to be wholly supported by taxation in 1872 very little has been given. Nearly all of it has been donated for the benefit of secondary schools. A large portion of the local school funds is held in Hartford and New Haven Counties—in the former \$118,220, in the latter \$66,055.

NEW LEGISLATION.

The general assembly of 1889 enacted the following:

School term.—Public schools must be maintained at least thirty-six weeks each year in districts having a school population of over fifty, and at least thirty weeks in others, under penalty of forfeiting State school moneys; but no school need be kept where the average attendance the previous year was less than eight.

School libraries and apparatus.—Any town may purchase books and apparatus for the public schools, and every town so purchasing is entitled to receive from the State treasurer \$5 for each 100 pupils or fraction thereof in each of its schools.

State secretary.—The secretary of the State board of education is made *ex officio* a member of the school committee of every town and district having a school in which teachers are appointed by the State board.

Normal schools.—Two free normal schools are established, to be maintained at an expense to the State of not exceeding \$40,000 in the aggregate per annum.

Town management.—Any town adopting town control must retain it five years, instead of two as heretofore, before a vote is taken on the question of abandoning it.

DAKOTA.

[From Report of Territorial board of education for 1888-89, L. A. Rose superintendent.]

GENERAL STATEMENT.

Dakota was never so prosperous in educational affairs as in her last year under a Territorial government. The large school system of the Territory has been carried on without any other means of support than that of direct taxation. Numerous private schools have also been established and carried on; the people of Dakota will rival even those of Ohio in the relative number of private schools they are maintaining.

It is anticipated that a marked improvement will take place in the schools when the State governments are put into operation, owing to the new impetus that will be given to education from the sale of the school lands and the passage of uniform school laws.

SCHOOL LANDS.

The public schools of the two Dakotas will rest upon a much firmer basis from the fact that the lands donated by the General Government now become available for school purposes. The number of acres in these lands is 1,715,009, and the average value per acre is \$5.79, making the total value \$9,929,902. Some of the school lands are quite valuable, those in Yankton County being estimated at \$14.03 per acre, those in Cass at \$11.05, those in Clay at \$11, and those in Logan and Pembina at \$10.

TEACHERS.

One of the greatest disadvantages that Dakota has labored under heretofore has been a lack of well qualified teachers, but since the establishment of two public normal schools, one at Madison and the other at Spearfish, and of several private normal schools, this want will soon disappear. Many experienced teachers from the East are also constantly increasing the number in Dakota.

TOWNSHIP SYSTEM.

Another disadvantage has been a lack of uniformity in the school system; seventy-two counties operating their schools under the township plan, and sixteen under the district system. This has been a cause of much annoyance, but it is very probable that the township plan will soon be generally adopted.

GRADED SCHOOLS OF THE CITIES.

The graded schools will compare favorably with the best in the East, and their success is manifested to some extent by the large per cent. of the school population enrolled.

"These schools are all supplied with elegant and commodious buildings, the cost of which ranges from \$6,000 to \$80,000. As a general thing they have a good supply of apparatus with which to carry on their work. The best trained teachers that can be found are employed to teach in these schools and good salaries are paid. These schools are now ready to take rank with the best of their kind in any of the States."

STATISTICS.

The statistics for 1888-89, as given in the report of the board of education, bear so many internal evidences of unreliability resulting from incompleteness and typographical errors that they are not reproduced here. In the State tables (chapter XXII) the figures for 1887-88 are repeated.

PROVISIONS RELATING TO EDUCATION IN THE CONSTITUTION OF NORTH DAKOTA.

ARTICLE VIII.—Education.

A high degree of intelligence, patriotism, integrity, and morality on the part of every voter in a government by the people being necessary in order to insure the continuance of that government and the prosperity and happiness of the people, the legislative assembly shall make provision for the establishment and maintenance of a system of public schools which shall be open to all children of the State of North Dakota, and free from sectarian control. This legislative requirement shall be irrevocable without the consent of the United States and the people of North Dakota.

The legislative assembly shall provide at its first session after the adoption of this constitution for a uniform system of free public schools throughout the State, beginning with the primary and extending through all grades up to and including the normal and collegiate course.

In all schools instruction shall be given as far as practicable in those branches of knowledge that tend to impress upon the mind the vital importance of truthfulness, temperance, purity, public spirit, and respect for honest labor of every kind.

A superintendent of schools for each county shall be elected every two years, whose qualifications, duties, powers, and compensation shall be fixed by law.

The legislative assembly shall take such other steps as may be necessary to prevent illiteracy, secure a reasonable degree of uniformity in course of study, and to promote industrial, scientific, and agricultural improvement.

All colleges, universities, and other educational institutions for the support of which lands have been granted to this State, or which are supported by a public tax, shall remain under the absolute and exclusive control of the State. No money raised for the support of the public schools of the State shall be appropriated to or used for the support of any sectarian school.

ARTICLE XIX.—*Public Institutions.*

The following public institutions of the State are permanently located at the places hereinafter named, each to have the lands specifically granted to it by the United States in the act of Congress approved February 22, 1889, to be disposed of and used in such manner as the legislative assembly may prescribe, subject to the limitations provided in the article on school and public lands contained in this constitution:

First. The seat of government at the city of Bismarck, in the county of Burleigh.

Second. The State university and the school of mines at the city of Grand Forks, in the county of Grand Forks.

Third. The agricultural college at the city of Fargo, in the county of Cass.

Fourth. A State normal school at the city of Valley City, in the county of Barnes; and the legislative assembly in apportioning the grant of 80,000 acres of land for normal schools made in the act of Congress referred to, shall grant to the said normal school at Valley City as aforementioned, 50,000 acres, and said lands are hereby appropriated to said institution for that purpose.

Fifth. The deaf and dumb asylum at the city of Devils Lake, in the county of Ramsey.

Sixth. A State reform school at the city of Mandan, in the county of Morton.

Seventh. A State normal school at the city of Mayville, in the county of Traill; and the legislative assembly, in apportioning the grant of land made by Congress in the act aforesaid for State normal schools, shall assign 30,000 acres to the institution hereby located at Mayville, and said lands are hereby appropriated for said purpose.

Eighth. A State hospital for the insane, and an institution for the feeble-minded in connection therewith, at the city of Jamestown, in the county of Stutsman; and the legislative assembly shall appropriate 20,000 acres of the grant of land made by the act of Congress aforesaid for "other educational and charitable institutions" to the benefit and for the endowment of said institution.

The following named public institutions are hereby permanently located as hereinafter provided, each to have so much of the remaining grant of 175,000 acres of land made by the United States for "other educational and charitable institutions," as is allotted below, viz:

First. A soldiers' home, when located, or such other charitable institution as the legislative assembly may determine, at Lisbon, in the county of Ransom, with a grant of 40,000 acres of land.

Second. A blind asylum, or such other institution as the legislative assembly may determine, at such place in the county of Pembina as the qualified electors of said county may determine at an election to be held as prescribed by the legislative assembly, with a grant of 30,000 acres.

Third. An industrial school and school for manual training, or such other educational or charitable institution as the legislative assembly may provide, at the town of Ellendale, in the county of Dickey, with a grant of 40,000 acres.

Fourth. A school of forestry, or such other institution as the legislative assembly may determine, at such place in one of the counties of McHenry, Ward, Bottineau, or Rolette as the electors of said counties may determine by an election for that purpose, to be held as provided by the legislative assembly.

Fifth. A scientific school, or such other educational or charitable institution as the legislative assembly may prescribe, at the city of Wapeton, county of Richland, with a grant of 40,000 acres.

Provided that no other institution of a character similar to any one of those located by this article shall be established or maintained without a revision of this constitution.

PROVISIONS RELATING TO EDUCATION IN THE CONSTITUTION OF SOUTH DAKOTA.

ARTICLE VIII.—*Education and school lands.*

The stability of a republican form of government depending upon the morality and intelligence of the people, it shall be the duty of the legislature to establish and maintain a general and uniform system of public schools wherein tuition shall be without charge, and equally open to all, and to adopt all suitable means to secure to the people the advantages and opportunities of education.

All proceeds of the sale of public lands that have heretofore been or may hereafter be given by the United States for the use of public schools in the State; all such per centum as may be granted by the United States on the sales of public lands; the proceeds of all property that shall fall to the State by escheat; the proceeds of all gifts or donations to the State for public schools or not otherwise appropriated by the terms of the gift; and all property otherwise acquired for public schools, shall be and remain a perpetual fund for the maintenance of public schools in the State. It shall be deemed a trust fund held by the State. The principal shall forever remain inviolate, and may be increased, but shall never be diminished, and the State shall make good all losses thereof which may in any manner occur.

The interest and income of this fund, together with the net proceeds of all fines for violation of State laws and all other sums which may be added thereto by law, shall be faithfully used and applied each year for the benefit of the public schools of the State, and shall be for this purpose apportioned among and between all the several public school corporations of the State in proportion to the number of children in each, of school age, as may be fixed by law; and no part of the fund, either principal or interest, shall ever be diverted, even temporarily, from this purpose or used for any other purpose whatever than the maintenance of public schools for the equal benefit of all the people of the State. * * *

The legislature shall make such provisions by general taxation, and by authorizing the school corporations to levy such additional taxes as with the income from the permanent school fund shall secure a thorough and efficient system of common schools throughout the State.

No appropriation of lands, money, or other property or credits to aid any sectarian school shall ever be made by the State or any county or municipality within the State, nor shall the State or any county or municipality within the State accept any grant, conveyance, gift, or bequest of lands, money, or other property to be used for sectarian purposes, and no sectarian instruction shall be allowed in any school or institution aided or supported by the State.

No teacher, State, county, township, or district school officer shall be interested in the sale, proceeds, or profits of any book, apparatus, or furniture used or to be used in any school in this State under such penalties as shall be provided by law.

ARTICLE XIV.—*State institutions.*

The charitable and penal institutions of the State of South Dakota shall consist of a penitentiary, insane hospital, a school for the deaf and dumb, a school for the blind, and a reform school.

The State institutions provided for in the preceding section shall be under the control of a State board of charities and corrections, under such rules and restrictions as the legislature shall provide; such board to consist of not to exceed five members, to be appointed by the governor and confirmed by the senate, and whose compensation shall be fixed by law.

The State university, the agricultural college, the normal schools, and all other educational institutions that may be sustained either wholly or in part by the State shall be under the control of a board of nine members, appointed by the governor and confirmed by the senate, to be designated the regents of education. They shall hold their office for six years, three retiring every second year. The regents, in connection with the faculty of each institution, shall fix the course of study in the same. The compensation of the regents shall be fixed by the legislature.

The regents shall appoint a board of five members for each institution under their control, to be designated the board of trustees. They shall hold office for five years, one member retiring annually. The trustees of each institution shall appoint the faculty of the same, and shall provide for the current management of the institution, but all appointments and removals must have the approval of the regents to be valid. The trustees of the several institutions shall receive no compensation for their services, but they shall be reimbursed for all expenses incurred in the discharge of their duties, upon presenting an itemized account of the same to the proper officer. Each board of trustees, at its first meeting, shall decide by lot the order in which its members shall retire from office.

The legislature shall provide that the science of mining and metallurgy be taught in at least one institution of learning under the patronage of the State.

DISTRICT OF COLUMBIA.

[From Report for 1888-89 of the board of trustees.]

STATISTICAL SUMMARY.

| | 1887-88. | 1888-89. | Increase or decrease. |

| Average annual salary paid the white teachers..... | \$651.26 | \$653.62 | I\$2.36 |
| Average annual salary paid the colored teachers..... | \$583.31 | \$580.12 | D\$3.19 |

The reports of the board of trustees and superintendents show that the public schools of the District of Columbia are in an excellent condition; that, judging from the frequent expressions of approval and high commendation of their results and the interest manifested by the pupils in their work, they are meeting with great success. Any child of the District, from the time it is able to grasp the rudiments of an education, can enter a public school, where it will be placed under the instruction of a skillful teacher; it can pass from grade to grade, fully comprehending the studies of each without any unreasonable mental exertion, until at last the boy or girl graduates from the high school with a thorough English education and, perhaps, some knowledge of higher branches, and fully equipped for any of the ordinary avocations. Or, if he has been deprived of educational advantages in his childhood and is now required to support himself, he still finds the doors of the evening schools open to him, where he can spend an hour both profitably and pleasantly. The citizens of the District may justly take great pride in their educational facilities.

ACCOMMODATIONS.

During the last three years much has been done by the erection and extension of buildings to accommodate the number of pupils attending; so that, while 12,089 out of the 32,336 pupils attending school three years ago were limited to half-day sessions, during the year under review only 6,000 out of 35,764 pupils were limited to half-day sessions. If these extensions shall be continued a year or two longer, provision will then have been made for all the pupils, and thereafter it will only be necessary to provide for the ordinary increase.

The building now used for the colored high school is inconveniently situated for the pupils attending it, and is needed for pupils of lower grades in the immediate neighborhood.

Although an additional building containing twelve class rooms, an armory, a library, and laboratories, has just been erected for the Washington High School, there has been so great an increase in the number of pupils that additional room is still needed. The enrollment in 1888-89 was 1,107, but in the session of 1890 there have already been enrolled 1,400 pupils, and it is probable that in 1890-91 the number will reach 1,600. This is a larger number than can be accommodated or conveniently supervised, and it is therefore suggested that one of two courses be adopted—that the first grade in the high school be relegated to the grammar schools and be made to constitute a ninth grade, or, else, that two new high-school buildings be erected, one on Capitol Hill, the other in Georgetown. The first method could be adopted as a temporary expedient, but the second is the only one that can permanently remove the difficulty. This would also place a high school within the reach of a large number of pupils who are now under the necessity of walking a long distance or of paying street-car fares. In either case much time is lost.

TEACHERS' SALARIES.

One of the most urgent needs to be supplied is an increase in the salaries of teachers, especially of the high-school teachers. Not only do they deserve higher salaries, but it is found that they can not otherwise be retained. With a few exceptions, all of the accomplished teachers employed in the Washington High School four years ago have resigned in order to accept more lucrative positions. Nearly all of these teachers are leading graduates of such institutions as Dartmouth College, Johns Hopkins University, Amherst, Vassar, Cornell, Wellesley, and the Columbian University, and after an experience of one or two years they can easily command a higher salary than the present restrictions permit. It is true that the average salary paid teachers here is equal to that paid in other cities, but there are conditions existing here which are not found there. In other cities there are manufacturing and other enterprises which call for the work of the larger boys and girls, consequently they are withdrawn from the schools. But here nearly all of the pupils continue through the fifth grade, and about two-thirds of them continue through the entire course. A great many children here are sent to private schools for two or three years and then enter the public schools. For these reasons we find the proportion of pupils in the higher grades here much larger than in other cities. Consequently the average salary should be larger.

EVENING SCHOOLS.

These schools had a larger attendance than ever before and many of those who formerly attended showed their appreciation of and interest in them by returning again. These schools furnish educational opportunities to many boys and girls who labor during the day, and also to many adults. The course of studies should be enlarged and some forms of manual training, such as cooking and sewing, should be included.

MANUAL TRAINING.

The introduction of manual training into the schools has proved eminently satisfactory; it has not only not retarded the progress of the pupils but has seemed to give them increased interest in their studies. Many useful lessons were given in cooking and sewing, and the general report is that the parents heartily indorse it and the pupils enjoy a change from the regular routine. In the Washington High School 200 pupils in the first and second year classes, who had not taken cooking lessons the year before, received instruction.

FREE TEXT-BOOKS.

Text-books are loaned to pupils whose parents declare their inability to purchase them, but there are many parents who dislike to make such a statement, although they

could truthfully do so. It often occurs, too, that children are withdrawn from school when they reach the higher grades on account of the expense of text-books. For these and other reasons it is thought best that free text-books be furnished to the pupils; the expense after the first year would probably be less than one dollar per pupil.

SCHOOL DAY.

It is suggested that the school day of the primary schools be extended to four and one-half hours, closing at 3 p. m. This is particularly desirable in the suburban schools, where many of the children in the primary grades are quite large.

SUPERVISION.

The supervisors of the schools are intelligent and capable and are diligent in their work, but on account of the large number of schools they must supervise, and the number is continually increasing, it is impossible for them to give the close and careful attention which each school deserves. The number of supervisors is much smaller in proportion than the number employed in other cities. At least two additional supervisors are needed at present.

FLORIDA.

[From Report for 1888-89 of State Superintendent Albert J. Russell.]

| Amount received from common school fund..... | 32,064 | 37,000 | I.....4,936 |
| Amount received from State taxes..... | 74,808 | 76,000 | I.....1,192 |

The people of Florida are to be congratulated upon the excellent school facilities with which they are now provided; all the children of the State, both white and colored, are within easy access of a school, and high schools are being established in every county, so that boys and girls who complete the course of the ordinary common schools may continue their education still further. The people are taking great interest in the schools and appreciate the advantages derived from them. All of the public school funds, except \$37,000 derived from the proceeds of lands, are raised by taxation. New school-houses, well planned with regard to light and ventilation, are being constructed wherever needed and provided with the most improved furniture. The school officers, although not experienced teachers in all cases, are good business men, energetic and faithful, and ever on the alert to improve their schools.

COUNTY HIGH SCHOOLS.

It is the aim at present to organize and operate in every county one free high school at the county site or some more suitable place, and when the counties shall have increased in wealth and population other high schools may be established. Several of the most enterprising counties have already established such high schools and they are giving great satisfaction. These schools are designed to fit their pupils for business pursuits or for entrance into colleges.

INDUSTRIAL TRAINING.

The State board of education, being convinced of the importance of this subject, in 1886 called the attention of county superintendents and boards of instruction to the importance of giving boys in the public schools some lessons in the handling and use of tools, and of instructing girls in cooking, sewing, etc. One difficulty encountered is the scarcity of teachers capable of giving such instruction. It is now taught, however, in the agricultural and normal colleges, and in several of the city schools.

REFORM SCHOOL.

The attention of the legislature was called to the importance of establishing a reform school where vagrant and vicious boys and girls might be taken in charge and educated. At present, when a boy at school is found to be ungovernable he is dismissed, and thus the probabilities are that he will grow still worse. Such a school should be separated from the evil influences of city life, and the pupils should not only be instructed in the ordinary branches of an education, but they should be taught different trades, so that they would afterwards be enabled to lead honorable lives.

ARBOR DAY.

The 14th day of February was appointed as Arbor Day, and the county superintendents were instructed to see that the day was properly observed. The number of schools observing the day was 476, the number of pupils participating 13,468, and the number of trees planted was 5,353. Oaks, cedars, magnolias, hickories, and fruit trees were planted, and, in addition, many church premises and cemeteries were cleaned up.

NOTE.—We quote the following from a letter of a superintendent of schools in Florida: "We have about 200 pupils in the ——— schools, with no State or county funds from which to obtain *anything* but *advice* and *teachers' salaries*, the school buildings and seats, which cost \$6,000, being the gift of private citizens."

IDAHO.

MORMONS AS PUBLIC SCHOOL TEACHERS.

During the year the question arose whether Mormons were legally qualified to teach school. Superintendent Stevenson decided that "inasmuch as the law declared that no certificate should be granted to any person who is not known to be a law-abiding citizen and of good moral character it was the duty of the county superintendent to reject any applicant who failed in the above particular, notwithstanding the fact that the applicant had passed a satisfactory examination; that all persons who indulged in practices prohibited by law or who belong to or aid, support, or assist in the support of or encourage any order, organization, or association that teaches such practices so prohibited by law, or who teach, counsel, or advise any person to belong to such an order or organization, were not law-abiding citizens within the meaning of the law, and could not be allowed to teach in the public schools or draw public money."

DISTURBANCES.

"In the southern counties, commonly known as the Mormon counties, there is a decided opposition to the public school system manifested by members of the organization known as 'The Church of Jesus Christ of Latter-Day Saints,' or Mormons.

"This sect, dominating the souls, minds, and actions of its devotees, has used and is still using its influence against the successful operation of the school laws. Many Mormons refuse to send their children to school unless the teacher is of the same faith. Every Mormon from childhood up is a teacher, compelled to teach their peculiar doctrines to all who will listen, especially to those under him. This being the case, it is no wonder that 'Gentiles' refuse to allow their children to be placed under such influences. Thus the public school is between two fires, but is gradually getting out. The strong hand of the law is too powerful for such a state of affairs to last long, and soon the cause of free education will shed its light in the dark paths of intolerance and priestcraft. The school offices are gradually getting into the control of the 'Gentiles,' and the result in each district is an awakening of educational interest.

"An act was passed at the last session of the legislature compelling all who withdrew from such an organization to declare their intentions before the clerk of the district court, and they can not vote until two years have elapsed thereafter. This is made applicable to all elections."

SCHOOLHOUSES.

"During the school year ending August 31, 1889, it has been very gratifying to observe the awakened interest regarding the building of new and commodious schoolhouses. As will be seen in an accompanying table, there has been an increase of thirty-five schoolhouses, and they for the most part have been erected on sites the title of which is vested in the district. There seems to be a growing desire for the districts to own the realty. A great many districts have erected their schoolhouses on Government land, from which they can be and are often moved at the whim of the board of trustees. When, however, the district owns the land the building is anchored, so to speak, and the grounds become the subject of ornamentation and decoration. Thousands of trees were planted with interesting ceremonies on Arbor Day, which in a few years will beautify and adorn these temples of education."

"In some counties there is a decided opposition to the public schools, unless they are in control of the religious denomination which is most numerous. Many schoolhouses are erected by popular subscriptions, and are used alike for school and religious purposes. In many districts the buildings are owned by religious organizations and are rented by the district. In Bear Lake County twelve out of the fifteen districts rent buildings from the peculiar sect there prevalent and dominating. Five are thus rented in Oneida County. Under such circumstances the power of the church is thrown against the erection of public schoolhouses, and the course of public education is trampled under the foot of religious fanaticism."

"Probably the most substantial and beautiful educational structure in Idaho is situated at Boise City, being the property of an independent district. Hailey and Bellevue are not far behind. Lewiston and Moscow possess large three-story frame buildings, endowed with all of the latest improvements. Beautiful and creditable schoolhouses have been erected at Caldwell, Shoshone, Idaho City, Ketchum, Pocatello, Blackfoot, Eagle Rock, Salmon City, Genesee, and Albion. Elegant buildings are under process of construction at Rathdrum, Weiser City, and other points. Many districts are adding the latest globes, physiological and historical charts, geographical maps, dictionaries, and other appliances."

INDEPENDENT DISTRICTS.

A general law for the establishment of independent school districts has been "enacted by the legislature, with a view of providing better educational facilities for special localities. Any school district which has within its limits taxable property of the amount of \$200,000 or over may be organized into an independent school district. It then has power to sue and be sued, to have a corporate seal, to hold and convey such real and personal property only as is needed for actual school purposes, and to choose such officers as are provided by law. The board of trustees have complete control within the powers delegated to them by law."

Two districts have been already organized under this law in addition to Boise City and Lewiston, which had previously been organized under special enactments.

SCHOOL LANDS.

The lands reserved for the support of the public schools amount to 970,240 acres. These lands will not become available until Idaho is admitted as a State into the Union.

WOMEN AS COUNTY SUPERINTENDENTS.

An act approved January 25, 1889, provides that no person elected to the office of county superintendent shall be disqualified from holding such office on account of sex.

IOWA.

[From Report for 1887-88 and 1888-89 of State Superintendent Henry Sabin.]

a Include payments on bonded indebtedness.

TEMPERANCE INSTRUCTION.

Reports from every county in the State indicate that there is a very general desire to administer the law faithfully. Considering the difficulties naturally arising when a new branch is introduced into the course of study, the progress made is very encouraging. The attention the subject received last year in institutes greatly assisted teachers in their work. Much more will be accomplished during the coming year.

The superintendent recommends a law making it a misdemeanor, punishable by a heavy fine, to sell tobacco in any form to a minor under sixteen years of age.

NUMBER OF CHILDREN NOT ATTENDING SCHOOL.

In response to a resolution of the general assembly the following information regarding the number of children between 8 and 16 years not attending school in city independent districts was furnished by the State superintendent:

| | |
|------------------------------------------------------------|--------|
| Total number of children between the ages of 8 and 16..... | 96,392 |
| Number at work in stores, shops, and factories..... | 6,740 |
| Number not in a school of any kind..... | 13,077 |

It is true that in some instances the results have been estimated, but they are sufficient to determine the fact that in all the cities there is a large number of children who are not in attendance upon any school. This number would undoubtedly be greatly increased if made to include those who have not been in attendance at school for twelve consecutive weeks during the past year.

As a result, the enactment of a stringent compulsory attendance law is recommended, regulating also the employment at labor of children of school age.

THE TOWNSHIP SYSTEM.

The adoption of the township system of organization is strongly urged. It is remarked that if the people of the State could be made to understand how much time, and money, and strength is wasted in carrying the present complex system into effect, and how much the efficiency of the schools could be increased by the adoption of the civil township as the unit, they would demand that the legislature take immediate steps toward accomplishing that result.

The reports for 1889 show that the money which is paid out for school purposes must pass through the hands of about 4,650 school-district treasurers; that the orders upon which it is paid out must be drawn and signed by 4,650 secretaries, and that they must also be signed by an equal number of presidents of boards of directors. Thus, under the present system, it requires some part of the time of about 13,950 different persons before the money reaches those to whom it is due. It is a fair estimate that, including officers, directors, and subdirectors, it requires over 25,000 persons to manage school affairs.

ENUMERATION AND APPORTIONMENT.

It is recommended that the enumeration of school children be made every alternate year instead of annually; also that the apportionment of school moneys be made upon the basis of average attendance instead of school population; the money would thus reach those schools in which there is the most work to be done on account of the large number of pupils. In fact such an enactment, together with one providing for free textbooks, would doubtless increase the attendance and act as a very efficient auxiliary to a compulsory law.

KENTUCKY.

THE NEW STATE BOARD.

Act 81, to regulate public education in Louisiana, was duly promulgated in 1888. This act was summarized in the Bureau's Report for 1887-88.

In accordance with the requirements of its first section a State board of education was appointed by the Governor, consisting of one member from each Congressional district—"a decided improvement on the former method of organization of the board of education. In each district there is a representative gentleman who takes an active interest in common schools and in general education." In addition to these there are three *ex-officio* members—the Governor, the State superintendent, and the attorney-general.

TEXT-BOOKS.

In compliance with section 3 of the school law, the State board of education adopted a list of books to be used in the public schools. Contracts were entered into with publishing houses, stipulations being made to have the books sold at certain specified prices.

"The retail prices are as low as the retail prices of schoolbooks in any State of the Union. The prices are stamped on the books." The publishers contract to give a discount of 16½ per cent. to dealers generally throughout the State, and an additional discount of 10 per cent. to not less than six depositories who supply the local dealers.

"So far, the scheme to secure uniformity in the use of books at reduced prices has proven satisfactory to those upon whom devolve the expenses of purchasing them."

PARISH BOARDS.

At its second meeting the State board appointed the members of the several parish boards.

"It is made one of the duties of the parish board of directors to report to the State board of education all negligence on the part of school officials. No such report has been made. The inference is reasonable that there was no serious neglect of duty or delinquency, and that those which may have occurred were remedied by the board wherever they existed without the necessity of reporting to the State board.

TOO MANY SCHOOLS.

The parish boards are vested with the authority of dividing their respective parishes into school districts. The State superintendent recommends the districts to be made as large as can be done consistently with the convenience of the pupils. "It is preferable that children should walk some distance and that they be given the opportunity of attending schools a longer time annually than that they should have a large number of poor schools in close proximity during a limited time. At times boards have yielded to the urgent and commendable zeal of patrons and have opened a larger number of schools than could be maintained a sufficient number of months to make them useful."

MAINE.

ATTENDANCE.

The number of different pupils enrolled was smaller by 1,067 than in the previous year. During each year of the preceding decade there was a decrease in the number of pupils; the entire decrease during that time being 8,835. This constant loss is attributable in part to the parochial schools which have been established in many places. It is estimated that 2,500 pupils attend parochial schools in Lewiston, Auburn, Biddeford, Saco, Waterville, Calais, and Westbrook. But another cause of the decrease is the establishment of numerous high schools throughout the State.

CHARACTER OF SCHOOLS.

During the seven years in which statistics have been collected showing the grades of the schools there was a decrease of 106 in the whole number of different schools, but an increase of 184 in the number of graded schools. This indicates a marked tendency to consolidate small schools into a few well-conducted ones.

There was an increase of six in the number of ungraded schools teaching history, and of seventy-two in the number teaching bookkeeping; but there was a considerable decrease in the number teaching physiology and hygiene.

TEACHERS.

The number of male teachers employed constantly diminishes, while the number of female teachers increases. The decrease in the aggregate number of terms taught by men during the last ten years was 867; the increase in the number of terms taught by women was 1,814. A larger number of experienced teachers and of graduates of normal schools was employed, and the salaries of teachers were slightly higher; it is presumable, therefore, that more successful work was accomplished.

SCHOOL DISTRICTS AND SCHOOLHOUSES.

Seven more towns have discarded the district system and adopted the town system instead; but one town, St. Albans, after having tried the town plan for three years, has returned to the district system.

Although 75 new schoolhouses were built during the year, there was an increase of only 5 in the number reported as in good condition. In the preceding ten years 680 new schoolhouses were built, 579 of which took the places of old ones, and yet the number in good condition increased only 189. It seems, therefore, that some of the school buildings do not receive the care and attention which should be given them.

FREE TEXT-BOOKS.

The most important enactment made in many years in regard to educational matters was that of the recent legislature requiring that after August 1, 1890, towns shall furnish all pupils of the public schools with text-books at public expense. The funds necessary for this purpose shall be raised in the same manner as other public moneys. School committees shall select a uniform series of text-books, and shall contract with the publishers for the purchase and delivery of the same. No text-book thus introduced shall be changed in five years unless by a vote of the town; any person violating this provision shall forfeit five hundred dollars, to be recovered in an action of debt by any school officer or person aggrieved. School committees shall make such rules and regulations, not repugnant to law, as they deem proper for the distribution and preserving of school books and appliances furnished pupils at the expense of the town.

"When a pupil in a public school loses, destroys, or unnecessarily injures any such schoolbook or appliance his parent or guardian shall be notified, and if the loss or damage is not made good to the satisfaction of such committee within a reasonable time they shall report the case to the assessors, who shall include in the next town tax of the delinquent parent or guardian the value of the book or appliance so lost, destroyed, or injured, to be assessed and collected as other town taxes."

Superintendent Luce advises the school committees to make no changes in the books used, except for very strong reasons, and that the books now in possession of pupils, when in good condition and of the kind selected, be bought up and made a part of the town supply, and that the prices at which future supplies of books are to be furnished be determined in the contracts made with publishers. The requirement that books shall be uniform does not prevent the use of two or more series of readers.

All books, before being distributed, shall be labeled and numbered, and at the close of the school term they shall be returned, unless special permission to keep them during vacation has been obtained.

HIGH SCHOOLS.

These schools are meeting with marked success and are evidently affording a grade of instruction for which there is a very general demand.

In 1880 high schools were supported in 88 towns and were attended by 6,215 pupils. In 1888-89 they were supported in 204 towns and were attended by 14,900 pupils. Of the 28 new towns in which high schools were established, in 22 they were established by town action and in 6 by district action; this indicates that a much larger territory has been provided with high-school privileges.

The cost of these schools was about \$9.40 per pupil for the year. The high schools are proving to be of much advantage to the lower grades of the common schools by furnishing them with well-trained teachers and by relieving them of the work of instructing a few scholars in the higher branches.

RECOMMENDATIONS.

Superintendent Luce makes the following recommendations:

1. "That school committees and supervisors, in carrying into effect the free text-book law, study (1) to secure the best book at the least expense, making the fewest practicable changes, and utilizing by purchase or otherwise, so far as practicable, books owned by pupils; (2) to hold teachers and pupils to sharp and strict accountability for careful usage and prompt return of books owned by the town; and (3) to so systematize the distribution and return of them by keeping proper records that the exact condition and location of every such book may be easily determined at the end of every term."

2. That they strictly enforce the laws for compulsory attendance.

3. That they scrupulously guard against the admission of unfit teachers and endeavor to retain successful teachers.

4. That in towns having abolished the district system regular courses of study be adopted for the ungraded schools, from which pupils may be graduated in like manner as from graded schools.

5. That they encourage the abolition of the district system and the establishment of high schools.

6. That they urge teachers to attend educational meetings, and that they themselves take part in such meetings.

7. That they advise young teachers who show a natural aptitude for their work to take a professional course at a normal school.

8. "That, in short, they seek to elevate the public schools of their town by vigilant, earnest, persistent, and aggressive action as leaders in all educational reforms."

NEW LEGISLATION.

Free text-books.—Towns shall furnish pupils of the public schools with free text-books.

High schools.—"The course of study in the free high schools shall embrace the ordinary English academic studies, especially the natural sciences in their application to mechanics, manufactures, and agriculture; but the ancient or modern languages and music shall not be taught therein except by direction of the superintending school committees having supervision thereof."

Any town may authorize its superintending school committee to contract with the trustees of any academy or high school for the tuition of scholars resident within such town; and the expenditures of any town for such purpose shall be subject to the same conditions and shall entitle such town to the same State aid as if it had made such expenditure for a free high school.

Plantations have same powers as towns.—Plantations have the same powers and liabilities as towns for the formation of districts, collecting school moneys, etc.

Evening schools authorized.—Cities and towns may raise and appropriate money for the support of evening schools, in which only the elementary branches shall be taught, but pupils of any age shall be admitted.

School law to be published biennially.—The State superintendent is required "biennially, as soon as practicable after the adjournment of the legislature, to compile and have printed in pamphlet form three thousand copies of the amended school law of the State and distribute the same to the municipal and school officers of the several towns."

The report of the State superintendent shows that during the year 1888-89 there was no material change made in the school system of Maryland; no marked advance movement, and no step backward; there was the ordinary and natural increase in the number of schools and teachers which was required by the normal growth in enrollment and average attendance. In fact, the schools and school system of Maryland have reached such a point of development that no radical change is desirable, and we find that in fifteen years no change of importance has been made in the school law. "Maryland is blessed in having many examiners of long experience—one from the beginning of the system in 1865, several from its reorganization in 1868, and only a very few of less than six years' standing."

The teachers, as a whole, are intelligent and earnest in their work, and endeavor in many ways to render themselves capable instructors. This is shown by their almost universal attendance on the teachers' institutes and by the formation of reading circles, from which great improvement is derived.

The recommendation of the State superintendent that the few remaining county academies be made a part of the public-school system is heartily indorsed by the board of Frederick County. This board established high-school departments in the public school at Middletown and in the female school at Frederick City. These departments are well patronized and highly appreciated by those who have children to educate, and many requests are received by the board for the extension of such facilities for higher education.

ATTENDANCE.

The compulsory school laws require all children in the State between 8 and 14 years of age to attend some public day school or some private school approved by the school committee for at least 20 weeks during each year.

The number of children in the State between 5 and 15 years of age May 1, 1888, was 367,785; the number of children of all ages attending the public schools during the year was 363,166, an increase of 5,166 over the previous year, but still not equal to the population 5 to 15 years of age. This can readily be accounted for to some extent. Many children, for various reasons, do not enter the public schools until they are 7 or 8 years of age; others leave them at 14 to learn some trade or to earn a livelihood. Again, 53,663 pupils were reported as attending private schools or academies.

The per cent. of attendance based upon average membership was 90; in 18 towns it was above 95, in 15 it fell below 80. In the towns having these low averages there was probably much negligence on the part of both parents and school officers.

The law requires all the schools to be kept for six months and high schools for ten months. Four towns have failed to keep their schools for six months and fifteen others barely reached the limit.

TEACHERS.

The whole number of teachers employed was 10,123, more than nine-tenths of them being women. The number of men teaching has been constantly diminishing for ten

years, while the number of women teaching has as constantly increased. In the cities and larger towns the tenure of the teachers' position is becoming more permanent, but in the poorer towns changes are constantly occurring.

The proportion of teachers who have attended the State normal schools has greatly increased, and we may consequently infer that better work was done. The normal graduates also furnish many valuable lessons to other teachers around them and to many of their own pupils, who afterward become teachers and adopt the methods with which they have become acquainted.

HIGH SCHOOLS.

The number of high schools in the State is 236, and 90 per cent. of the people now have high-school privileges in their own towns. That these schools are highly appreciated is manifested by the fact that high schools are maintained by a large number of towns not required by law to do so.

EVENING SCHOOLS.

The number of evening schools maintained was 240, a larger number than in the previous year, but the average attendance was smaller. The attendance in these schools was very unsatisfactory, many persons attending a few evenings and then dropping out.

EXPENDITURES.

The expenditures for school purposes are increasing from year to year, and the ratio of increase is slightly larger than the ratio of increase of school population or of school attendance. As the standard of teaching is being made higher, the salaries of teachers must also be higher. Better buildings are now required, and they must be better heated and ventilated. The sum of \$22,118.33 was expended for the transportation of children in preference to sending them to small and poorly conducted schools.

SUPERVISION.

The school committees have long felt that they could not give to the schools that degree of attention and superintendence which they deserve, and in the cities special officers have been provided for this purpose. To aid the smaller towns in securing supervision the legislature of 1888 passed the following act:

"SECTION 1. Any two or more towns, the valuation of each of which does not exceed two million five hundred thousand dollars, and the aggregate number of schools in all of which is not more than fifty nor less than thirty, may, by vote of the several towns, unite for the purpose of the employment of a superintendent of schools under the provisions of this act.

"SEC. 2. When such a union has been effected the school committees of the towns comprising the union shall form a joint committee, and for the purposes of this act said joint committee shall be held to be the agents of each town comprising the union. * * * They shall choose by ballot a superintendent of schools, determine the relative amount of service to be performed by him in each town, fix his salary, and apportion the amount thereof to be paid by the several towns, and certify such amount to the treasurer of each town."

The act further provides that whenever such union shall have raised by taxation \$750 for the support of a superintendent of schools a warrant may be drawn upon the treasurer of the State for \$1,000, one-half of which amount shall be paid for the salary of the superintendent and the other half for the salaries of teachers.

Sixteen union districts have been formed under this provision, and so far the plan gives great satisfaction. Some fear was entertained at first that it would excite jealousy between the districts, but such has not been the result. The principal difficulty encountered has been that some towns have not been able to find others in their vicinity with which they could unite.

Many advantages arise from the employment of school superintendents. The supervision of the schools, especially of the smaller and poorer schools is more uniform and intelligent; the needs of the schools are more promptly supplied; there is more system, better organization and classification; teachers are selected with greater care; there is greater economy in the purchase and use of supplies, and school property is better cared for.

The powers and duties of the superintendents are essentially the same as those of the school committees whose places they are mainly intended to supply, and whose approval they are expected to secure. They should endeavor to ascertain by examinations and

observation which candidates are most likely to prove successful teachers, and should recommend such to school committees for election. They should see that the courses of study are wisely arranged, and that the methods of imparting instruction are such as have proven satisfactory. The individual teachers, however, should be allowed full freedom in adopting new plans and experiments for giving increased interest to their exercises. The selection of text-books should be left by the school committee to the judgment of the superintendent and teachers who have used them in the class room. The superintendents should endeavor, as far as possible, to have schoolhouses properly located, conveniently arranged, well ventilated and lighted. They should endeavor in different ways to infuse into the people an interest in educational matters so that a full attendance of the school population may be secured.

TRUANT SCHOOLS.

The law requires all towns to provide for the confinement and instruction of truant children; but, as the number of truant in individual towns would frequently be small, it is provided that county truant schools may be established, to which the different towns may send their truant. In four counties, namely, Hampden, Berkshire, Hampshire, and Norfolk, truant schools have been established. All the towns of the State should immediately provide for a faithful compliance with this law.

PHYSICAL TRAINING.

New impetus has been given to the importance of physical training of pupils by the recent discussions on this subject. Physical health and vigor are essential to full activity of the mind, as well as to a full measure of happiness and success in life. Every pupil leaving a public school should possess both mental and physical vigor, *mens sana in corpore sano*.

PRIVATE SCHOOLS.

The number of private schools reported is 396, an increase for the year of 48. Although the statistics of private schools are very imperfect, it is well known that the ratio of increase of attendance on private schools is much larger than the ratio of increase of public school attendance. It is to be regretted that recent events have brought about this condition of affairs, for the public schools being supported and controlled by the State, they are presumably better prepared to furnish a broad and liberal education. This condition of affairs does not call for restrictive legislation, however, but must be met by improving the public schools so that all citizens will prefer to have their children attend them.

ATTENDANCE.

Since 1880 there has been a small but almost constant annual decrease in the number of children attending the public schools as compared with the number of children in the State. This decrease amounted during the ten years to 5.4 per cent. Not only so, but in the year 1889 there was a decrease of 1,614 in the public school enrollment, although there was an increase of 10,146 in the number of children in the State. This decrease is still more remarkable when it is considered that a compulsory attendance law was passed in 1883, and in 1885 an act for reformatory education of refractory youths. The decrease in the per cent. of census children attending schools during the different years is here shown:

| Year. | Per cent. | Increase or decrease. |
|------------|-----------|-----------------------|
| 1880 | 71.6 | I..... |
| 1881 | 71.7 | I......1 |
| 1882 | 71.5 | D......2 |
| 1883 | 69.8 | D.....1.7 |
| 1884 | 70.1 | I......3 |
| 1885 | 69.2 | D......9 |
| 1886 | 69 | D......2 |
| 1887 | 69.6 | I......6 |
| 1888 | 67.5 | D.....2.1 |
| 1889 | 66.2 | D.....1.3 |

No satisfactory explanation can yet be given for this constant decrease, and sufficient information has not been obtained with respect to private schools to determine how far these may account for it.

FREE TEXT-BOOKS.

The legislature passed an act requiring the district board of each school district to "post in a conspicuous place, at least ten days prior to the first annual school meeting from and after the passage of this act, a notice that those qualified to vote upon the question of raising money in said district shall vote at such annual meeting to authorize said district board to purchase and provide free text-books for the use of the pupils in said district. If a majority of all the as-above-provided voters present at such meeting shall authorize said board to raise by tax a sum sufficient to comply with the provisions of this act, the said district board shall make a list of such books," and shall notify the State superintendent of the action of such meeting. Accordingly, at their next annual meeting 520 districts made provision for free text-books.

SCHOOL LAW.

Besides the act with reference to free text-books, an act was passed requiring the supervisors of townships in which a fractional district is situated to include the proportion of the mill tax to be placed on their respective assessment rolls.

An effort was made to secure the adoption of township school districts, but failed.

A new edition of the general school laws, including a digest of the supreme court decisions, was published during the year.

TEACHERS.

The whole number of teachers necessary to supply all the schools was 10,637. The graded schools employed 4,201, only 184 more than was necessary to supply them, but the ungraded schools employed 11,874, or 5,254 more than were necessary. It is seen, therefore, that on an average nearly every ungraded school employed two teachers during the year.

Of the 15,979 persons applying for county certificates 206 received first-grade certificates, 554 second grade, and 10,361 third-grade certificates. This indicates that there is great need of thoroughly competent and experienced teachers. Too many of the teachers have engaged in the work only as a temporary business, and they are therefore lacking both in the necessary qualifications and in the desire to qualify themselves. Again, teachers have no strong inducement to enter upon the work as a permanent profession, for they can secure no definite tenure of position. The teacher's position is too often bestowed as a reward for personal or political favors instead of to the one most competent to discharge its duties.

Although only 22 per cent. of the teachers are males, their relative number is constantly decreasing. In 1889 the number of men teaching was 92 less than in the previous year and 253 less than in 1886. On the contrary the number of women teaching was 312 greater than in the previous year.

STATE CERTIFICATES.

According to the public acts of 1889 the State board of education shall issue life certificates to all persons who have taught for two years in the schools of the State and who shall upon examination be found to possess eminent scholarship, ability, and good moral character. Under the previous regulations for granting State certificates only forty-three persons had secured them during ten years, but since they have been made valid for life it is probable that they will be in greater demand.

SCHOOLHOUSES AND THEIR SURROUNDINGS.

The estimated value of the public-school property is \$13,386,637, the amount expended during 1889 for buildings and repairs being \$641,661. Notwithstanding the large amounts spent upon school buildings, less than one-third of them are reported as properly heated and ventilated. This is attributable in large part to the tendency so prevalent a few years ago of erecting buildings of abnormal height and showy exterior appearance, but having little regard to the comfort and well-being of the pupils. In the rural districts very little regard is had for the proper lighting and ventilation of school-houses, consequently when one part of the schoolroom is uncomfortably warm the other part is cold; but in the plans of city school buildings special attention is now given to these aims.

Upon the subject of outbuildings Superintendent Estabrook uses the following words: "I feel constrained in this connection to refer to a condition of affairs that is far too prevalent, and for the continuance of which the district officers can justly be held re-

sponsible. I allude to the shameful condition of the outbuildings attached to the school-houses in many districts. Frequently but one building is provided for both sexes, and the boys and girls use it indiscriminately. Or, what is scarcely less disgraceful, the buildings are placed in close proximity to each other without any permanent barrier between them. The effect of such a state of affairs upon the moral tone of the pupils and the terrible results that are likely to follow are too patent, to any one whose sense of decency is not entirely lost, to need even a statement. That they are allowed to exist is a sad commentary on the moral tone of a community, and implies at least a criminal negligence on the part of those school officers who permit it."

EDUCATIONAL FUNDS.

"The money derived from the sale of school lands and from escheats to the State constitute the primary school fund proper, and bear 7 per cent. interest. The moneys derived from the sale of swamp lands donated by Congress constitute the primary school 5-per-cent. fund.

"The interest derived from each of these funds, together with the surplus of specific taxes remaining in the State treasury after paying the interest on the several educational funds and the interest and principal of the State debt, forms the primary school interest fund, the entire amount of which that may be on hand at the time is apportioned to the school districts of the State semiannually, between the 1st and 10th days of May and November in each year."

The primary school 7-per-cent. fund amounted, June 30, 1889, to \$3,722,286, and the primary school 5-per-cent. fund amounted to \$807,391.

MISSISSIPPI.

| Total expenditures | 962,263 | 1,115,808 | I.....153,545 |

GENERAL STATEMENT.

That the year 1888-89 witnessed a great improvement in the educational progress of Mississippi is evident from several considerations. In the first place there were 919 more schools, and the number of children sharing in the benefits of them was greater

by 51,213 than in the previous year. The average daily attendance was greater by 23,562, or 15 per cent., and the average length of the school term was one day longer. During the last two years twelve cities and towns erected school buildings, at a total cost of \$190,000. "In 66 counties the collections exceeded the disbursements by \$191,300, while practically only 8 counties exceeded their collections, incurring a debt in all of about \$15,000." More than 800 country schoolhouses were built, at a cost of \$116,951. There was an increase of 1,018 in the number of first-grade teachers, and it is therefore presumable that better work was accomplished.

SCHOOLHOUSES.

According to the enactments of the legislature the attorney-general and State superintendent of education were required to distribute the 2 and 3 per cent. fund received from the sales of Government land whenever the fund exceeded \$15,000. The distribution was made in December, 1888, the amount distributed being \$73,429.05. In order that as much as possible might be accomplished by means of the fund, the State superintendent issued a circular advising supervisors in the different counties to distribute the fund to those districts that would supplement it in some way, by appropriating unused balances of the common-school fund, by raising certain amounts, or otherwise. These suggestions were followed in many counties, and in nine months from the time of the distribution 475 new schoolhouses had been erected, and others were in the course of construction. In some counties the fund was prorated to the different districts, and little good was accomplished by it, while in others it was unlawfully applied to the payment of teachers' warrants. In Monroe County the fund was supplemented by an appropriation of \$2,000, and forty-one new schoolhouses were erected, at a cost of from \$200 to \$700 each, and others were repaired and furnished with stoves and blackboards.

SCHOOL CENSUS.

There are great discrepancies between the returns made by the auditors as to the number of children of school age and those made by the county superintendents. As a consequence there are no reliable data upon which a distribution of State funds can be made.

SIXTEENTH SECTIONS.

"Mississippi received from the United States in sixteenth sections 661,000 acres. In lieu of sixteenth sections in Chickasaw cession, 174,550 acres." The leasing of these lands was variously intrusted to boards of police, county school directors, county school commissioners, and boards of supervisors. They have nearly all been leased for ninety-nine years and the notes and revenues squandered. A satisfactory report of the fund of Warren County, however, was made in 1889 by the county treasurer. The sixteenth sections of the Yazoo Delta, which has lately been found to possess valuable resources, are still unleased, and should be saved to the State by appropriate legislation. The supervisors should be prohibited from leasing these lands for longer periods than eight years, and the rents should be invested in bonds and only the interest allowed to be used.

UNIFORM EXAMINATIONS.

The law of 1836 requiring uniform teachers' examinations throughout the State, although it met with strong opposition, has been found an eminently wise one. That it has not prevented competent teachers from passing the examinations successfully is evidenced by the fact that 1,018 persons received first-grade certificates.

While admitting that many of the most intelligent and faithful county superintendents advocate annual examinations of teachers, Superintendent Preston thinks that, in order to stimulate teachers to thoroughly qualify themselves for their work, certificates should be granted under certain conditions for a longer time than one year. He would have an annual examination of all holders of second and third grade certificates. All first-grade teachers who made an average of 85 per cent. should be licensed for two years and those who made an average of 90 per cent. for three years. Any person who received a three years' license a second time should be entitled to teach in that county without any further examination. State licenses should also be granted to those who passed a special examination showing themselves possessed of broad scholarship and successful experience as teachers.

SUPERVISION.

It is claimed by very many that county superintendents are useless factors in the school system and that the money paid them could be better devoted to the payment of teachers' salaries. In those counties where the superintendents are incompetent or neglect the faithful discharge of their duties they are in reality useless appendages, but nothing can contribute more to the improvement and successful operation of the public schools than intelligent and faithful supervision. The excellence of the schools in cities and towns is attributable to careful supervision more than to anything else. Competent superintendents can not be had, however, unless they are adequately paid, and in many of the counties the salaries paid are entirely too low to secure good men.

Superintendent Preston thinks that the law enacted in 1888, making the office of county superintendent an elective one, was a great mistake, and that it will subject the person chosen to improper influence in the granting of licenses and fixing teachers' salaries.

HIGH SCHOOLS.

Besides the graded schools of the cities and towns, there were reported 150 high schools, normal schools, and denominational colleges. Some of these enrolled from 250 to 400 students. Many of them were supported in part by the public funds, and gave free tuition during the public term. The success of these schools affords evidence of an appreciation by the people of higher education, as well as evidence of increased material prosperity.

SEPARATE SCHOOL DISTRICTS.

"Following the policy and practice of other States, Mississippi has from the beginning of her free-school system allowed her towns and cities to become separate school districts.

"In the first public school law, enacted in 1870, the privilege was granted to towns having 5,000 population; in 1873, by amendment, to towns having 2,000; by the code of 1880, to towns having 1,000; by the revised law of 1886, to towns having 750.

"Many of our towns have special laws granting them full local control of their schools and power to levy a tax in support thereof. This legislation was demanded by their peculiar conditions, and is in exact accord with the universal practice of the other States of the Union.

"Educational progress and activity are to-day most prominent in our separate school districts. Thirty-five towns are maintaining their schools from seven to ten months each year, their average school levy being four mills, and some of them levying as high as seven and one-half mills."

The State distributes \$390,000 to the counties for school purposes. About two-thirds of this arises from liquor licenses, fines, and forfeitures; the other \$100,000 is given from the general State fund. The funds distributed by the State would only maintain the school about one-third of the required term of four months; each county must maintain its own schools for the other two-thirds of the term. In this way the State seeks to equalize the burden of taxation and to encourage local support of the schools. Upon the same principle the separate school districts are allowed to retain their local levies, for while they pay about one-third of the whole State fund, they only receive about \$23,000 from it. Besides, "reports from seventeen towns show an enrollment of 1,401 country pupils. Estimating the other eighteen towns at 1,000, we find the separate school districts carrying 2,400 country pupils, or 12½ per cent. of their entire attendance.

"The counties pay the tuition of these pupils for four or five months, and the towns let them continue in the schools the rest of the session absolutely free of charge."

NEW TEXT-BOOK LAW—COUNTY UNIFORMITY.

A law approved February 22, 1890, provides for a uniform series of text-books in each county, to be selected by county boards of seven teachers each, and not to be changed for five years.

The general condition of the schools was better than it has ever been, more and better teachers were employed, and they were paid better salaries. The financial condition of the schools, too, was excellent. The settlements of the clerks and treasurers show that at the close of the year nineteen out of every twenty districts had paid all indebtedness and had a balance on hand. All schools hereafter will have a term of at least six months. The citizens of the State may well congratulate themselves upon the excellent condition of the schools, for it is a well-recognized fact that the social and material welfare of a State depends, to a large extent, upon the education of its people.

CRITICISMS OF THE PUBLIC SCHOOLS.

There are many persons who are continually urging objections to the public schools. They allege that the public schools are Godless, that the Bible is not used in them, that the public schools are responsible for the increase of crime, and that they develop in the children indifference, profligacy, and unsteadiness of character. Before considering the objections of such persons it is well to ascertain whether these are the *real* causes of complaint, whether such persons would favor the public schools if these objections were removed, or whether, on the contrary, they have brought forward these objections because they dare not disclose the true ones. "What do they mean by Godless schools? Nothing more nor less than this, their peculiar ideas and notions of religion are not sanctioned, espoused, and taught. They want the Bible introduced and used as a text-book; but what Bible? Introduce it, which can not be done without violating the constitution of our State, and these same parties will be the first to find fault, for they will soon see that this is a two-edged blade that cuts in both directions, for and against their preconceived views and notions."

But it is asserted that the public schools are responsible for the large number of criminals. Where is the proof of such a charge? Although the public schools draw large numbers of pupils from the poor, the vicious, and the ignorant, the classes most likely to furnish criminals, and who are debarred from entering private schools, we find very few criminals who have attended the public schools long enough to secure a good education. If enrolled at all, they probably attended only a short time, their attendance was irregular, and they were already so vicious that they properly belonged to the reform schools. But even if it be granted that many of the criminals were educated in the public schools, is it probable that they would otherwise not have been criminals? The censors of the public schools say nothing of the hosts of tradesmen, mechanics, laborers, teachers, lawyers, ministers, and statesmen who were educated in the public schools, and many of whom received there the impulse which resulted in their success.

SCHOOL TERM.

Hereafter the minimum length of the school term of each district shall be six months instead of four, provided a tax of 40 cents on each \$100 of assessed valuation, together with the public funds, will be sufficient to maintain the schools for six months. Districts can not now rely entirely upon the public funds, but the boards of directors are authorized to make out a tax of four mills on the dollar without any vote of the people. As the school terms will now be longer, it will be possible to secure a better grade of teachers.

WHAT SHOULD BE TAUGHT.

"The law should fully set out the subjects to be taught in all the public schools of the State, and empower the board and the teacher to require each pupil to pursue the same until completed, and higher branches should be admitted only 'by order of the board' or by a vote of the people. Boys are well advanced in arithmetic who know nothing about grammar; girls apply themselves to grammar, but do not want to study arithmetic and United States history. The result is, there is no gradation in the school, and education—in such school—simply means a partial knowledge of two or three textbooks.

"The law on teaching the evil effects of alcoholic stimulants and narcotics upon the human system is a farce and fraud. It is virtually a prohibition against temperance instruction in the public schools. And strange as it may appear, those who claim to favor proper legislation upon this subject favored this measure, while they rejoiced over the defeat of senate bill No. 52, which required such instruction in all the schools of the State. The law as it stands is worthless, and should be repealed or amended."

LANGUAGE OF THE SCHOOLS.

"The law should specify definitely in what language the instruction in our public schools is to be given. It is a shame and a disgrace to American institutions to have the English language ruled out of our public schools and German substituted, as is done wholly or in part in many districts in this State. The average legislator appears to quake when this matter is brought up for consideration. Right and justice are forgotten or smothered, for the sake of the German vote. No reasonable argument can be adduced why German should be taught in any primary schools. Representatives and senators admit that German can be put out of a public school by an injunction served upon the board; but why shall a citizen be compelled to resort to the courts to secure that which should be provided by legislative enactment? Men have said to me, 'You should not agitate this question; it is impolitic to inaugurate a fight along that line.' My purpose in bringing this matter to the attention of the public, and before our legislature, is that justice may be administered to the citizen, and the children be taught to speak, read, and write the English language. The same spirit that deprives the children of any community of the benefits of instruction in the English language would, if it dare, subvert the very foundations of this Government and subject our children to a thralldom and tyranny as despotic as that from which many of these innovators emigrated, only to try to bind the shackles upon others that they themselves could not endure.

"This is not a fight against Germans, but against the introduction of the German language into our primary schools. This wrong will not much longer be tolerated; it should not be, for where it now is practiced there is an alarming state of affairs; law is disregarded, our institutions derided, and all that is held sacred ruthlessly trodden under foot; and nothing else can be expected of such a community."

SECTARIANISM.

"Your attention is again called to the fact that in many localities in this State that provision of our constitution which prohibits the use of public funds to build up and foster sectarianism is violated with high-handed recklessness. Here again, allow me to speak plainly; it is not my purpose to conceal my true meaning; all the trouble from this quarter has arisen in Catholic communities, where they have control. In such communities the tenets of the church and the study of the catechism are made part of the daily instruction in the public school; and in more than one community the priest openly dictates who shall and who shall not teach the public school of such community. The State constitution is plain upon this subject; but it needs proper legislation to enforce its provisions, and not compel the citizens to have to resort to law to secure their rights."

SUPERVISION.

A great mistake was made in the revision of the school law in not providing for a county superintendent for such county. The legislature was opposed to this; it, however, passed a measure providing for county supervision for all those counties which may vote to adopt it.

TEACHERS.

Many of the teachers employed in the rural districts are thoroughly competent and successful in their work, but there are others who are sadly deficient. The county teachers' institutes are doing much to improve the qualifications of teachers, but the normal schools especially are sending out many excellent teachers, who are exemplars of enthusiasm, tact, and skill to other teachers.

SCHOOL BUILDINGS.

More school buildings were erected during the year than ever before. They were also larger and better buildings. The value of school property increased during the year more than \$1,000,000, making a total value of school property at the present time of nearly \$11,000,000. Many of the schoolhouses in rural districts are too small to accommodate the children of the districts. Many of them are not fenced in, and some are not even locked at night. They are also used for other than school purposes, such as meetings of societies, clubs, etc. The schoolhouses are frequently very much injured on such occasions. No one feels responsible for the condition of the schoolhouses. The school boards expect the teachers to attend to them, and the teachers expect the school boards to do so. The condition of the water-closets is often disgraceful. If a teacher has no regard for the hygienic surroundings of his pupils he should not be allowed to have charge of them.

HIGH SCHOOLS.

Twenty-seven cities and towns have high schools with a course of four years, thirty-eight with a course of three years, and sixty-five with a course of two years. Nearly all of these are in an excellent condition. Their success depends to a large extent upon the school boards. If the board is always anxious to economize by securing the cheapest teachers and having a short term, the schools will not meet with that success which should attend them. In some of the high schools which have courses of three or four years, where there are only three or four pupils in the last year's course it would be advisable to shorten the course by one year.

THANKSGIVING DONATION.

In November, 1888, the superintendent of public instruction sent out circulars to the schools asking them to observe Thanksgiving Day by making donations to the needy children, so that they might be provided with the necessary books and clothing for attending school. The experiment was so entirely successful that it was repeated in November, 1889, and many a child went home with a smiling face and a happy heart on account of the present it had received, while the contributors fully realized the truth of the expression that "it is more blessed to give than to receive."

ARBOR DAY.

Arbor Day was first observed in Missouri in April, 1886. Since that time it has been observed annually on the Friday following the annual school meeting, which is held on the first Tuesday in April. This day has now been set apart by the legislature as Arbor Day. It has now been observed four times, and thousands of trees, vines, and shrubs have been planted in the school yards.

The superintendent of public instruction says that he is constantly receiving letters from all parts of the State for information relating to sales and leases of the school lands. He also states that depredations are continually being made upon these lands, and that it will require close oversight to prevent them.

He suggests that county superintendents, besides being required to compile the reports of district trustees and clerks, should also be required to report upon the general work of the schools, the condition of the buildings, fences, furniture, etc.

NEW LEGISLATION.

Section 1950 of the school laws was amended in March, 1889, so as to authorize trustees of school districts to submit to the electors of the districts the question of issuing cou-

pon bonds to an amount not exceeding 4 per cent. of the taxable property of such districts, and bearing a rate of interest not exceeding 7 per cent. per annum, the proceeds of such bonds to be used in erecting schoolhouses and purchasing the necessary land.

PROVISIONS OF THE CONSTITUTION OF THE STATE OF MONTANA RELATING TO EDUCATION.

ARTICLE XI.—*Education.*

SECTION 1. It shall be the duty of the legislative assembly of Montana to establish and maintain a general, uniform, and thorough system of public, free, common schools.

SEC. 2. The public-school fund of the State shall consist of the proceeds of such lands as have heretofore been granted, or may hereafter be granted, to the State by the General Government, known as school lands, and those granted in lieu of such; land acquired by gift or grant from any person or corporation under any law or grant of the General Government; and of all other grants of land or money made to the State from the General Government for general educational purposes, or where no other special purpose is indicated in such grant; all estates, or distributive shares of the estates that may escheat to the State; all unclaimed shares and dividends of any corporation incorporated under the laws of the State, and all other grants, gifts, devises, or bequests made to the State for general educational purposes.

SEC. 3. Such public-school fund shall forever remain inviolate, guaranteed by the State against loss or diversion, to be invested, so far as possible, in public securities within the State, including school-district bonds issued for the erection of school buildings, under the restrictions to be provided by law.

SEC. 4. The governor, superintendent of public instruction, secretary of state, and attorney-general shall constitute the State board of land commissioners, which shall have the direction, control, leasing, and sale of the school lands of the State, and the lands granted or which may hereafter be granted for the support and benefit of the various State educational institutions, under such regulations and restrictions as may be prescribed by law.

SEC. 5. The interest on all invested school funds of the State, and all rents accruing from the leasing of any school lands, shall be apportioned to the several school districts of the State in proportion to the number of children and youths between the ages of six and twenty-one years residing therein respectively, but no district shall be entitled to such distributive share that does not maintain a public free school for at least three months during the year for which distribution shall be made.

SEC. 6. It shall be the duty of the legislative assembly to provide, by taxation or otherwise, sufficient means, in connection with the amount received from the general school fund, to maintain a public, free, common school in each organized district in the State for at least three months in each year.

SEC. 7. The public free schools of the State shall be open to all children and youths between the ages of six and twenty-one years.

SEC. 8. Neither the legislative assembly, nor any county, city, town, or school district, or other public corporations, shall ever make, directly or indirectly, any appropriation, or pay from any public fund or moneys whatever, or make any grant of lands or other property in aid of any church, or for any sectarian purpose, or to aid in the support of any school, academy, seminary, college, university, or other literary, scientific institution, controlled in whole or in part by any church, sect, or denomination whatever.

SEC. 9. No religious or partisan test or qualification shall ever be required of any person as a condition of admission into any public educational institution of the State, either as teacher or student; nor shall attendance be required at any religious service whatever, nor shall any sectarian tenets be taught in any public educational institution of the State; nor shall any person be debarred admission to any of the collegiate departments of the university on account of sex.

SEC. 10. The legislative assembly shall provide that all elections for school district officers shall be separate from those elections at which State or county officers are voted for.

SEC. 11. The general control and supervision of the State University and the various other State educational institutions shall be vested in a State board of education, whose powers and duties shall be prescribed and regulated by law. The said board shall consist of eleven members, the governor, State superintendent of public instruction, and attorney-general being members *ex officio*; the other eight members thereof shall be appointed by the governor, subject to the confirmation of the senate, under the regulations and restrictions to be provided by law.

SEC. 12. The funds of the State University and of all other State institutions of learning, from whatever source accruing, shall forever remain inviolate and sacred to the purpose for which they were dedicated. The various funds shall be respectively invested under such regulations as may be prescribed by law, and shall be guaranteed by the State against loss or diversion. The interest of said invested funds, together with the rents from leased lands or properties, shall be devoted to the maintenance and perpetuation of these respective institutions.

| Teachers' salaries..... | \$474,401 | \$478,035 | I.....\$3,634 |
| New buildings | 54,660 | 63,318 | I.....8,658 |
| Total expenditures | 708,489 | 739,073 | I.....30,584 |

The number of pupils enrolled, Superintendent Patterson says, "is 1,652 less than the number enrolled last year. This does not include the number enrolled for a less time than two weeks; but, as it stands, it would seem to indicate a rapid falling off of the school population of the State. But when we take into account the large numbers who have been taken from the public and put into private parochial schools from which we have no returns, we see that the above decrease of the enrollment indicates no falling off in the school population of the State, though it must decrease the average attendance of all the schools and to each school.

"Again, the tables show an increase of \$35,691.10 over the total revenue raised last year, but as fifteen new schoolhouses have been built during the period which cost \$63,317.91 we can see there has been a large falling off in the amount raised for the support of schools, as we had reason to fear there would be under the appraisal of 1885. It will be observed from the summary that the total expenditures of the last year exceeded the total income by \$26,641.92. This excess came from the money hired for building purposes and from the surplus of the previous year.

"The number of small schools under the town system is still decreasing. The last year twenty-one were dropped. As a consequence the number of graded schools is increased sixteen and the number of high schools two."

The apportionment of 1885 decreased the amount of the school tax in 162 towns. This curtailment of school revenues has deprived the schools of needed supplies and improvements and necessitated the employment of cheaper teachers or a shortening of the school terms.

Complaint is made that in some towns "men have been placed upon the [school] board and sworn to a discharge of its duties, whose inexperience, lack of interest, or want of early opportunities have left them utterly disqualified for such work. As a consequence the schools and the intelligence and the standing of these communities have suffered damage." To remedy this the State superintendent suggests the appointment

of county superintendents, not to supersede town school boards, but to discharge specific additional duties which can not be required of the town boards, especially to examine teachers, supervise schools in a general way, and assist in arranging for holding institutes.

Free text-books.—An act of the State legislature, approved July 30, 1889, renders it obligatory upon the school committees of all cities and towns to furnish "text-books and other supplies used in the public schools" to pupils free of charge.

ENUMERATION AND ATTENDANCE.

The whole number of children in the State between 5 and 18 years of age is 399,052, an increase of 2.9 per cent. over the census of the preceding year; the increase being largest in Passaic, Hudson, and Camden Counties. The increase in the cities was 5.4 per cent. The number of children 5 to 18 years of age enrolled in the public schools was 227,441, which is an increase in the whole number attending, but a decrease of 2 per cent. when the greater number of census children is considered. There is a constant annual decrease in the proportion of census children attending the public schools, but those who do attend do so for a longer time each year. In order to receive any portion of the public funds the schools must be kept open nine months. Nearly all the schools were kept open longer than that; the average term for the State being nine months and twelve days. Only one school in the State was kept open less than six months.

As the successful work of the schools depends so much on the punctuality and regularity of attendance of pupils, a record has been kept of these particulars and is presented in tabular form in the report. It shows that the average enrollment in each schoolroom

was 38, and the average daily attendance in each room was 31. If the cities are considered by themselves a better presentation can be made, for out of an average enrollment of 42 the number absent was only 6. In the matter of tardiness there was a little more than one case daily in the State, and a little less than one case daily in the cities, if considered by themselves.

TEACHERS.

Although there was an increase over the previous year of only $1\frac{1}{2}$ per cent. in the number of children enrolled, there were 178 more teachers, 6 men and 172 women. The State superintendent endeavored to reduce the number of teachers confining themselves closely to text-books and to reduce the number of daily recitations. It is thought that some improvement has been made in these respects. The average number of recitations heard daily is fifteen.

In regard to the experience of teachers New Jersey makes a favorable showing compared with other States. The average time taught by each teacher in the same school is 4 years and 6 months; but if the cities are considered by themselves the average time is 7 years and 9 months. The average total experience of all the teachers of the State is 8 years; the average experience of the city teachers, 10 years and 2 months. County and city superintendents have been faithful in their efforts to improve the qualifications of teachers, and the teachers themselves have been active in this direction. New Jersey long ago prohibited corporal punishment in the schools, and the 22 years of experience without it abundantly justify its disuse. Other improvements have followed gradually, until now the methods of teaching have reached a high degree of excellence.

SCHOOLHOUSES AND SUPPLIES.

Thirty-two schoolhouses have been built during the year, five of them replacing old houses no longer fit to use. Others have been enlarged, and quite a number repaired and remodeled. The school property of the State is now valued at \$8,300,610. Much more attention is now given to the proper lighting, heating, and ventilating of schoolhouses. The appropriation allowed the State department of education for furnishing plans and specifications of schoolhouses was not sufficient to supply one-half of the demand. Of the 2,642 schoolhouses in the State, 105 are reported "poor" and 69 as "very poor." It is probable, however, that the standards of classification have been raised, and that what would have been classed "poor" schoolhouses a few years ago are now classed "very poor."

In some of the cities, especially those increasing most rapidly in population, there is a lack of sufficient school accommodations. While their census population has increased about 6 per cent., the school accommodations have increased only about 4 per cent. As a result, we find the schoolrooms overcrowded. "If we fix the highest number of pupils that should be cared for in one room as 80—a very liberal standard—then we have 64 rooms that are overcrowded; one more than the number reported last year." Nineteen rooms were each made to accommodate more than 100 children.

There is a constant improvement in the schools as regards furniture and supplies, but there are still 231 schoolhouses furnished with the old-fashioned desks made of pine boards. Blackboards are needed in 262 schools and maps in 217. More than one-half the schools are supplied with libraries, and about one-third of the pupils are supplied with free text-books.

EVENING SCHOOLS.

These schools have been kept open 938 evenings; the number of pupils enrolled was 8,934, the average attendance each evening 4,272, the number of teachers 214, and the total appropriation for them was \$23,964.

REVENUES.

On account of the increased population of school age, the amount raised by the State tax for the support of schools was larger by \$68,180 than in the previous year. The whole amount, together with the \$100,000 from the invested school fund, was a little more than \$1,000,000. Although there was an increase in the amount raised for teachers' salaries by city and district taxes, the number of districts that taxed themselves for this purpose decreased to 280, about 23 per cent. of the districts in the State.

NEW MEXICO.

Complete and reliable school statistics of this Territory are not yet to be obtained; those given in chapter 22 are the best approximations that can be made. They are sufficient, however, to show that public schools have been making rapid strides since 1880, the yearly increase of enrollment for eight years having averaged about 17 per cent. The average number of public-school pupils to every 100 persons has increased since 1880 from 4 to 11. This latter number, however, is still only about one-half the average number for the country at large. (See table 3, column 6.) The expenditure for public schools is about one dollar per capita of the population, which also is about one-half that of the country at large.

There is no indication that the average growth of the past eight years is being continued, though there is doubtless a gradual and continuous improvement. Definite statistical information is much needed.

The compulsory attendance law of 1887 is defective in its wording, so that it can not be enforced, as it does not "compel anything or anybody." Even if this were not the case it would be largely inoperative through the indifference of the public and the practical difficulties in the way of its execution. It may have had some indirect beneficial effect.

Of the 344 public schools in the Territory 143 are taught in English, 106 in Spanish, and 95 in both languages. The Spanish-speaking people are generally "very anxious to have their children taught English."

PUBLIC SCHOOLS OF NEW MEXICO.

The following is taken from a report made by Mr. T. B. Mills, United States Treasury expert, to the Bureau of Statistics:

"The introduction and establishment of a system of public education for the children of New Mexico has been rather a slow and difficult process. There have been and are yet many causes which have retarded and still prevent a proper growth and development of public free schools. Among these may be mentioned the sparseness of population in grazing districts, where often the residence of one family is miles distant from any other, but the principal causes are a deep-rooted prejudice of an influential part of the population against the system of education and lack of training and understanding of its practical working by the people themselves and the district officers chosen to carry out the provisions of the laws. The best public-school laws in the world (which we have not) would be found to be inefficient and unsatisfactory when applied to a population unaccustomed to such a system. The successful execution of school laws depends so largely upon the people themselves, upon minor precinct officers, that the latter are very liable to misapprehend their duties and the scope of their powers and privileges unless they have had previous training and experience. Their acts of commission and omission may all be well intended, but they often fail to put schools in practical operation. It takes time. The children are not the only ones to be taught; the voting and governing population outside of the schoolroom have to learn the requirements of the law and the manner to enforce it to secure the best results. It takes a population educated under a public-school system to successfully enforce and administer public-school laws.

"But lack of experience may be overcome by interested effort, and I am glad to say that there is a large portion of the population of New Mexico enthusiastic in the support of public schools and popular education. They are anxious that their children shall learn. The English language is also steadily growing in favor. Necessarily the instruction in the schools of New Mexico has been largely in the Spanish language, but English is now taught wherever at all practicable.

"The general establishment of public schools throughout the Territory dates from the school law of 1884. It is not particularly a good law or a complete and perfect one by any means, but it introduced two new features which were not embraced in previous legislation and which secured the general establishment of schools. These were the provisions creating the office of county superintendent and the election by the people of a board of three directors or commissioners for each precinct. The system was a new one, and, fortunately for the great majority of counties, the first election resulted in the choice of competent and qualified men, who had nearly all been educated under the public schools of the States, to the offices of school superintendents. * * *

"The law was general in terms without specific provisions, but the superintendents found sufficient authority to organize one or more public schools in almost every precinct throughout the Territory, and they have ever since been fairly well maintained. The system is now firmly established and is growing constantly in public favor. The

school fund is provided by a tax of one-fourth of 1 per cent. on all the taxable property of the Territory. The poll tax and certain fines are also turned into the school fund.

"The first law relating to schools in New Mexico was passed January 23, 1860. By this law the justice of the peace in each precinct was to appoint the teacher and he was entitled to collect the sum of fifty cents per month for each child attending his school. Compulsory attendance of children was also provided for.

"On the 23d of January, 1863, another law was passed creating a board of education, consisting of the governor, secretary, the judges of the supreme court, and the bishop (Catholic) of New Mexico. This board was invested with extraordinary powers, 'to make all laws, rules, and regulations necessary for the education of all the children within the limits of this Territory.' They were not, however, provided with any certain fund raised by taxation, but 'all funds or moneys derived from the Government of the United States, from Territorial appropriations, or from any other source intended for public school purposes,' should be devoted exclusively to the cause of education. But as the funds 'intended for public schools' came in rather slowly this distinguished board with its ample grant of powers was not able to accomplish much in the direction of the education of youth.

"The legislature of 1872, however, made a decided advance in providing for public education. By the laws passed at that session a school fund was created by a levy of one-fourth of 1 per cent. on all the taxable property of the Territory, and instead of the Territorial board county boards of school directors or supervisors were created. These boards consisted of four persons, elected by the people of each county, and the probate judge. Under this law a number of public schools were established and fairly paved the way for the better system of 1884.

"By this last law, as before noted (the law of 1884), the county board of school supervisors was superseded by the boards of precinct directors and a county superintendent. This last system has created a lively interest in school matters among the common people and has yielded the best results.

"A comprehensive measure for public schools was before the last legislature (1889), and was ably championed by W. D. Kistler, representative from this (San Miguel) county, and editor of the Daily Optic, and the Territorial press generally, but from various causes it was finally defeated."

NEW YORK.

THE TEACHING SERVICE.

New York has increased her expenditure for public-school work from \$3,700,000 in 1860 to over \$16,000,000 in 1889. A consideration of this enormous increase of expenditure suggests the inquiry whether the schools are deriving all due profit from it. If the schools of the State come short of doing as excellent work as is done by the best European schools of similar grade, it is owing to laxness in conferring authority to teach, to indifferent training of teachers, and to the ill-usage which is put upon them.

Permanency in position is a prerequisite to the best results in schoolroom work. Yet out of 10,644 rural districts more than half of them had teachers who had not taught in the same districts the preceding term. More than 75 per cent. had not been a year in their present situations. During the year 3,251 teachers received their first certificates in the rural districts. Good school work can not be expected if the teacher is turned out of office whenever the trustee changes, or if his training has not been such as to put heart and soul into his work, or if he is not directed by and responsible only to competent authority.

New York State is leading the way to remedy the evils which stand in the way of a most substantial and professional teaching service. All her legislation, all the power of her State educational department, all the influence of her leading educators and educational journals have been in the direction of greater caution in the selection of teachers, more thorough and intelligent professional training, more permanent tenure of office, and better treatment for honest and competent work.

SCHOOL PROPERTY.

The legislation of recent years touching the improvement of school buildings and furnishings, supplemented by the publication by the State of schoolhouse designs, has led to the erection of an unprecedented number of new and handsome buildings and to the thorough repair and refurnishing of many old ones.

During the past year the public moneys were withheld from all districts until they were certified by supervisory officers to have complied with the provisions of the law concerning the number, arrangement, and character of the outbuildings connected with each schoolhouse.

ARBOR DAY.

The celebration of Arbor Day was generally observed in New York the first time Friday, May 3, 1889. The reports concerning the observance of the day indicate that the movement was heartily approved by teachers, school officers, pupils, and the general public. In some localities all other business was suspended for the day, the inhabitants vying with each other in making the exercises pleasant and profitable. Outside of the cities, 5,681 school districts reported as having observed the day, planting 24,166 trees, not including vines, shrubs, and flowers.

COMPULSORY ATTENDANCE LAW.

The compulsory education act of 1874 having failed hitherto to remedy the evils which led to its enactment, a new measure was prepared with great care, in which were embodied the principles which experience has shown to be essential in order to make any compulsory law effective. This measure passed the legislature, but failed to become a law for want of the approval of the governor. It will probably be amended and reintroduced the next ensuing session.

COURSES OF STUDY IN UNGRADED SCHOOLS.

The great difficulty which the ungraded rural schools have always encountered has been the entire absence of any fixed and orderly system of procedure. During the last year there has been a very decided movement towards mending the difficulty by providing a course of study for the ungraded schools. Two well-arranged courses have been put in operation, one in three counties, and the other has been approved and commended by twenty-two county school commissioners. Connected with these courses are systems of examination calculated to encourage continuous attendance, progressive study, and final graduation.

A STATE EDUCATIONAL COMMISSION PROPOSED.

Superintendent Draper, calling attention to the heavy expenditure for public education and the lack of organized system and method in school work, renews his recommendation for a State commission in the interest of education, upon a plan analogous

to those of Great Britain and Mexico. He is inclined to believe that a body composed of perhaps thirty or forty persons, in which the legislature, the colleges, the normal schools, the high schools, the district schools, the boards of trustees, the superintendents and commissioners, and the best professional opinion should be represented, and which should remain in session thirty or sixty days, and discuss general principles for the promotion of educational interests, would result in a strong impetus to the work and a permanent influence for good.

NEW LEGISLATION.

Expenses of superintendents.—The State superintendent is to make no allotment of State funds to any city or district for the expenses of a superintendent unless satisfied that such city, village, or district employs a competent person as superintendent, whose time is exclusively devoted to the general supervision of the schools.

Extension of school term.—The minimum number of weeks the school of a district is to be kept open in order to entitle it to share in the State apportionment has been increased from twenty-eight to thirty-two weeks, of five school days each.

Contracts with teachers.—No trustee shall employ a teacher for a shorter time than sixteen weeks, unless for the purpose of filling out an unexpired term of school; nor shall any teacher be dismissed in the course of a term except for reasons which, if appealed to the State superintendent, shall be held sufficient. Any failure on the part of a teacher to complete an agreement to teach a term of school, without good reason therefor, shall be deemed sufficient ground for the revocation of the teacher's certificate.

Raising money for teachers' wages.—No trustee shall issue an order or draw a draft upon any supervisor for money for the payment of teachers' wages, unless the supervisor has sufficient money in hand to meet such order or draft. If there is no such money available, and the district meeting has failed to authorize a tax to pay teachers' wages, the school trustees of the district are authorized to collect by district tax a sufficient amount.

Boards of education in union free school districts are authorized to levy a tax for teachers' wages and ordinary contingent expenses in case the inhabitants have neglected or refused to vote the same.

ORGANIZATION OF THE SCHOOL SYSTEM.

Attention is called by the State superintendent to the waste that accompanies the carrying on of the school system, a waste which is nowhere more strikingly exhibited than in the "double-headed" system for township schools. The township and district boards, as the law now stands, are an obstruction to each other, and should be replaced by a single system, such as the cities and towns have. "This system would concentrate responsibility, which is now scattered and evasive. It would tend to unify courses of study and introduce better methods of instruction. Under it the adjustment of the number of schools to the wants of the school population would become more easy and uniform. It would, also, be likely to create in the public mind a sharper distinction between good and poor teaching. Above all, it would promote economy in the management of the schools."

COMPULSORY EDUCATION.

A more stringent compulsory education law was enacted at the last session of the legislature, an account of which is reserved for another part of this Report.

SUPERVISION NEEDED FOR COUNTRY SCHOOLS.

"The ungraded country district schools, in which one-half our youth are to get all the school education that will fall to their share, are the ones yet to feel the benefits of intelligent inspection and direction. A few townships in the State have arisen above the educational level of their neighbors, and have availed themselves of the permissive features of the law, and have adopted township supervision, reaping from their intelligent enterprise a fruitful harvest of good results for their schools. But these townships in number are but as a drop in the bucket.

"That Ohio has been so long without supervision for her country schools is a fact not to be easily accounted for. It certainly is not the result of indifference on the part of her educators. Within the last forty years they have pressed the question upon the attention of the legislature again and again. * * * Ohio can never have a school system commensurate with her greatness as a State until she has placed her country schools under intelligent supervision. Without this all schemes for the improvement of these schools must prove but temporary expedients and fall short of their full measure of usefulness."

CONTINUANCE OF SCHOOLS.

The law of Ohio provides that "each board of education shall establish a sufficient number of schools to provide for the free education of the youth of school age within the district under its control at such places as will be most convenient for the attendance of the largest number of such youth, and shall continue each and every day school so established not less than 24 weeks in each school year. This is a very impor-

tant provision of the law, yet it is not complied with by all township boards." In 1888-89 there were 30 counties having 80 delinquent townships, with 170 delinquent subdistricts. Of the 80 delinquent townships but 15 taxed up to the limit of the law. "Where the township taxes up to the lawful limit no blame can attach to the township board, for it has done all that the law permits it to do. But where boards fail to impose such a rate of taxation within the limits of the law as will produce a sum sufficient to continue all the schools of the township 24 weeks, such boards fail to discharge a sworn duty. Yet, in the year 1887-88, 12 townships in 1 county failed to provide 24 weeks of school for all the subdistricts of the townships, and but 1 of these townships levied up to 7 mills, and 3 of them levied a tax less than 2 mills."

"There has been a very large increase in the number of graded schools during the year, viz, 566. The whole number of graded schools is now 10,117, nearly one-half of all our schools. This rapid increase of graded schools demands most careful watchfulness upon the part of superintendents and teachers. While we have the great gain derived from such division of labor as the graded school secures, we must seek to avoid the serious dangers involved. Teachers confined to one line of studies, and those that are suited only to a certain age, are apt to take into view only the small section of a child's life belonging to that age, and this weakens the great incentive to work which comes from the clear vision of the end of education in the beginning. The end is not the examination for promotion to another grade. The solid culture of the child toward a well-furnished personality—a developed, intelligent life of thought and act—must be the main aim of all teaching, and this should not be broken in upon by any interruption of artificial grades. Hence great caution is required in graded schools, lest, through anxiety to promote from grade to grade, the child be fitted more for examination than for life.

"The increase in the salary of teachers has been very small. Now that the amount appropriated by the State is two millions—double what it was four years ago—it is to be hoped that the average salary of teachers will be greatly enlarged. It is now, for male teachers, only thirty-nine dollars per month, and for female teachers only a little over thirty dollars. This want of proper remuneration is injuring the status of our schools. It is retarding the whole educational work of the State, and every exertion should be made to remedy this defect. Direct legislation can effect but little. Public sentiment must be aroused. Directors and parents must realize the vast importance of our schools and the great responsibility of our teachers, and refuse to make the matter of selecting them nothing more than the employment of the cheapest candidates in the market. Our superintendents also must make the provisional certificates fewer and fewer, demanding higher grades and insisting on more thorough examinations. By concerted action the way may be opened for a better condition of affairs as regards salaries and tenure of office.

"While thankful for the legislation secured in behalf of the schools, we regret very much that the bill for a closer supervision of our schools in rural districts failed of passage. Closer supervision is so necessary that it must soon come. The need of it becomes more apparent every day, and very many directors are only waiting for authority to organize the work."

RHODE ISLAND.

The general condition of the schools does not change very materially in any one year, but what changes are made are in the line of still further progress and development. There are several considerations which lead one to believe that the public schools are doing more successful work than formerly. That the people highly appreciate the education their children receive at the public schools is evidenced by the constantly recurring votes of towns and districts for the erection of school buildings and by the numerous demands for the establishment of high schools. That the character of the instruction given in the public schools has improved may be inferred from the fact that a larger proportion of the teachers are graduates of high schools, academies, and especially normal schools.

ATTENDANCE.

The school census shows a slight increase in school population, but the increase in the number of children attending public and private schools was three times as great. The great difficulty encountered, however, is the irregularity of attendance; it is the constant complaint of school committees. But there seems to be no available remedy for it unless parents can be made to fully realize and appreciate the benefits of education. The compulsory law can secure the attendance of children for a specified term, but it can not eradicate the evil of irregularity. "The number of children between the ages of 7 and 15, or those over whom the compulsory law is especially extended, was reduced 449, or nearly 10 per cent., while the number of those who attended less than 12 weeks, the minimum time fixed by law, was reduced nearly 20 per cent." This shows that

laws for compulsory attendance are meeting with good success. In some of the towns they are much more strictly enforced than in others. In Pawtucket, Woonsocket, Newport, South Kingston, and East Greenwich the enforcement of the law is found to be simple and feasible. There is no reason why it should not be as thoroughly enforced in the city of Providence. In many of the rural districts it is rarely necessary to resort to extreme measures; the simple fact that there is an officer to secure the attendance of children at school accomplishes the purpose. While a large number of cases of truancy are reported as having been investigated, only eleven were convicted. The length of time during which it is required that all pupils shall attend the public schools is only twelve weeks. It should probably be twenty weeks. It seems that all children between seven and twelve years of age, the most suitable years for them to acquire an education, should be attending school for more than the short period of twelve weeks. Sufficient progress can not be made in so short a time. Again, in most of the schools promotions are made twice a year, so that the classes are half a year apart, and, if attendance were required for twenty weeks, all the children would attend long enough to complete one grade each year.

SIZE OF SCHOOLS.

The number of small ungraded schools is constantly increasing. Fifty-four schools were reported as having less than ten pupils each, and some of them were so small that they scarcely deserved to be called schools. Much better results can be secured in large graded schools. It would be better to incur the expense of conveying children to a large school rather than to pay the salaries of teachers of such small schools.

ACCOMMODATIONS.

By comparing the number of sittings reported by the towns and districts with the school population it is found that there are accommodations for 94 per cent. of the children needing them. In many of the country towns there are more sittings than are needed, but in the manufacturing communities there is not a sufficient number. It is in these communities, too, that the compulsory law is most poorly enforced, and the children are not expected to attend the whole year. There is very little occasion, therefore, for any child to remain away from school on account of the want of accommodation. In those towns where there has been a deficiency in school accommodations provision is being made to supply the want by erecting large, well-planned, and convenient buildings.

TEACHERS AND WAGES.

Heretofore the number of male teachers has been constantly diminishing, but during the last year the number has increased by one. It is very desirable that the number of male teachers shall be still further increased, for, however successful women may be as teachers, it is not well that men should be entirely excluded. A larger number of the teachers were graduates of normal schools, high schools, and academies; it is therefore to be inferred that the work was well done. The number of pupils to a teacher was the same as in the previous year—thirty-three.

The salaries of teachers run higher than in the preceding year, men receiving \$1.07 more per month, and women 80 cents. The salaries of all the teachers are still lower than they should be, but especially is this true of teachers' salaries in the village grammar schools.

SUPERVISION.

The whole amount expended for school purposes was over \$900,000, but the amount paid out for supervision of schools was \$18,606, or a trifle over 2 per cent. of the whole amount expended. A large part of the supervision which schools receive is furnished without any compensation whatever, and without this voluntary supervision many of the schools would utterly fail. The State should not ask men to take this time away from their own affairs and to give it to the public. Moreover, the schools deserve more attention than they have heretofore received.

Each city and town is allowed to make its own regulations for determining the qualifications of its teachers; consequently, there is no uniformity in the requirements at all. Some of the cities require very high attainments, while others are very lax. All teachers in the State should be required to attain to a certain minimum standard of education, and cities should be allowed to require a standard as much higher as they see fit.

DISTRICT SYSTEM.

The board of education renews its former recommendation, which was also indorsed by the governor in his message to the legislature, that steps be taken to secure the abolishment of school districts: All the school officers of the State, as well as every State superintendent in New England, speak in favor of this change.

PUBLIC LIBRARIES.

There are 33 free public libraries containing 152,390 volumes, an increase of 8,121 over last year. Of course a large proportion of the books read are fictitious works, but there was a slight increase in the number of historical and educational works read. It is very important that good librarians should be secured so that they may know what kinds of books to recommend to the different classes of readers in order that they may be gradually interested in instructive works.

DRAWING.

There is a strong disposition now on the part of young men to enter upon mechanical pursuits rather than agricultural. The instruction given in the schools should always have a wise reference to the future work of the pupils in order that they may be well qualified to discharge their duties. For this reason the board of education consider it very important that drawing shall be taught in the schools, some skill in drawing being essential to successful industrial work.

SCHOOL APPARATUS.

The amount expended for school apparatus and books of reference was \$1,319.16. Many books of reference in history, biography, and travels were purchased, and, as music is now so generally taught in the schools, better facilities for its instruction have been provided. Many valuable aids for the study of natural history have also been provided. "One of the most noticeable features of late movements in this line is the variety of material provided for use in the primary school. 'Busy Work' has won for itself a prominent place in all of our better primary schools, and the problem now is no longer how to keep the children still, but how to keep them busy."

MORAL TRAINING.

Much is being said at the present time about the lack of moral training in the public schools. However thorough may be the instruction given, if the schools fail to impress the children with the full importance of virtuous principles they have fallen short of their proper work. It is quite probable, however, that the fault does not attach to the schools, but to the homes and the environments of the pupils.

PRIMARY EDUCATION.

A great change is taking place in the methods of instruction in the primary schools. It is no longer thought proper to place from 75 to 100 children in the care of one teacher. It is no longer thought that we can judge of the success of a teacher by the degree of quiet which she is able to secure. Life, movement, animation now characterize the successful primary schools.

GENERAL LOCAL TAX BILL.

After many years of vain effort a general local tax bill has been enacted by the general assembly, and was approved by the governor December 24, 1888. It will no longer be necessary for the people of any school district desiring to provide a fund supplementary to the State fund to get the special authorization of the general assembly; but the voters of any school district who return real or personal property for taxation to the amount of \$100 may levy a local tax not exceeding two mills and appropriate the same to such school purposes as they may see fit.

Any city, incorporated town, or village desiring to establish a system of graded or other public schools is constituted a separate school district.

Each taxpayer may have the tax paid under this act applied to any school in his district he may designate. Where no designation is made the money will be expended as other school funds in such district.

The new local tax law will prove of inestimable benefit, though the tax is too small for country schools. Some districts have been put in operation under the new law, but the amount raised by the tax is not sufficient to give the schools the length of term required.

The most urgent need of the school system in South Carolina is illustration, the practice of its principles in every community.

TOWN SCHOOLS.

The public schools steadily gain ground. In the towns the system of graded schools is being gradually adopted. Sumter, Darlington, and York, three of the largest centers of influence in this State, held during the year their first session under this plan. At no distant day every important place is expected to follow their lead.

The people of South Carolina are intensely conservative. They have been watching with a jealous eye the development of the new educational ideas and refuse to move until the success of a scheme has been thoroughly demonstrated. This has been done so fully that the business men are now leaders in the movement for a more complete system of public schools. Already splendid schools have been established at Charleston, Columbia, Greenville, Spartanburg, Rock Hill, Winnsborough, Chester, Seneca, Johnston, Barnwell, Marion, Florence, Bennettsville, Camden, and other important places. These recommend themselves by their cheapness, their thoroughness, and the vital fact that they reach every child. It is simply a question of time, Superintendent Rice says, when every town in the State that has real vitality and desires to educate the masses will have its graded school.

COUNTRY SCHOOLS.

The country schools present more points of difficulty. Property is less valuable and the population sparse, being mainly an agricultural people. Free labor is unreliable and expensive, and the children are needed upon the farms a large part of the year. This, while it gives them a valuable practical training in the different branches of agriculture, necessitates brief school terms. If a ten months' free graded school were located in every community very many could not use it more than six months. As a rule they use their opportunities well; and the school term in all cases may be made to extend to six months by the application of the new general local tax act.

The point requiring closest attention is the character of the work done during these short terms. Of the State system itself, the superintendent says: "After years of study of its provisions and contact with its operation and agencies in every part of the State, I say, with emphasis, that its principles are simple, wise, and strong." The trouble is that it has not been administered with fidelity. The great cry is for money; but if the school work is well done in the short terms and the money honestly applied the people will raise every dollar necessary. There is already great progress in many country school districts. They will compare favorably with the towns in the character of their schoolhouses, their equipment, length of session, competency of teachers, and vital connection on the part of parents with the administration of school affairs. There has been a large increase in the number and value of school buildings owned by the State. In some counties a good schoolhouse may be found in every locality.

PEABODY FUND AID TO GRADED SCHOOLS.

South Carolina has received a larger amount from this fund during the last year than any other Southern State. This has resulted in aid being given to graded schools. The total amount appropriated to graded schools from this source was \$4,450, of which Charleston received \$1,000 and Greenville \$850. Every one of these schools is successfully conducted, and furnishes to the community in which it is situated the very best practical evidence of its adaptability to educate people. These schools receive assistance three years under certain conditions. At the close of their three-year terms the towns are taxing themselves for better buildings and more thorough equipment. A detailed account of the operations of these various schools, their cost, their ability to handle large numbers, and to train children thoroughly, will astonish and delight every friend of learning.

α A few counties not reporting are estimated.

Superintendent Smith states that his report was published later than it should have been on account of his not having received full returns.

The salaries of county superintendents are so small that competent men refuse to accept the place, or if they do accept it they do not give proper attention to the work. Again, it seems impossible to secure prompt and full reports from the district clerks and county trustees. The remedy suggested is that county superintendents be paid liberal salaries and be vested with the power of approving warrants.

As only about two-thirds of the school population are enrolled in the schools it would seem that the education of a large proportion of the children is being neglected. But other things should be considered in this connection. The scholastic population embraces all persons between the ages of six and twenty-one, but many parents do not send their children to school until they are seven years of age, and many boys and girls complete the course of the public schools by the time they are fifteen. Some allowance should also be made for the number attending private schools.

| Mormon children enrolled | 2,897 | 1,477 | D1,420 |
| Whole number enrolled | 6,670 | 4,382 | D2,288 |

Under the act of Congress of March 3, 1887, the office of Territorial superintendent of district schools created by the laws of Utah was abolished, and it was made the duty of the supreme court of the Territory to appoint a commissioner of schools, who should possess and exercise all the powers and duties previously imposed upon the Territorial superintendent by the laws of the Territory, and who should report annually to Congress.

An examination of the reports of the commissioner of schools and of the governor of the Territory reveals the fact that the public-school system of Utah falls far short of what it should be, that not more than one-half the children in the Territory attend them, and that not more than one-half of the expenses of the public schools are paid from public funds, the remaining half being raised by charges for tuition.

The outlook for the future is equally discouraging, for the Mormon leaders, who exercise their influence over five-sixths of the people, are now beginning to establish church schools in each "stake" or church district. Since the passage of the law in 1837 which forbids the use in school of the Book of Mormon or any other sectarian book, their opposition has become intensified. If any improvement is made in the public schools it must originate outside the Territory.

DENOMINATIONAL SCHOOLS.

Quite a number of denominational schools have been established in the Territory by the different sects in the United States. Of these the Presbyterians have 33; the Congregationalists, 24; Methodists, 21; Roman Catholics, 6; Episcopalians, 6; Lutherans, 1; Baptists, 2; and Mormons, 6. The exact number of children attending these schools is not known, but it is estimated to be near 8,000. These schools, except those under Mormon control, would readily give place to a good system of common schools, conducted by competent teachers; it is thought that if the common schools were made entirely free, and if they did good work, the Mormon schools also would have to yield before them.

SCHOOL LANDS.

The whole amount of land granted by Congress for the benefit of schools in the Territory is 46,080 acres; but as the value of these lands is much lowered on account of the scarcity of water, they are only worth about \$1.25 per acre, or about \$60,000 or \$75,000 as a whole.

NEW LEGISLATION.

A new school law was enacted by the general assembly in 1888 and approved by the governor November 27, to take effect immediately. It had been drafted with great care by a board appointed especially to that end.

The principal change was from town to county superintendency.

A new and more stringent system of examinations for teachers' positions was adopted, the examinations to be simultaneous and uniform, and conducted by the county super-visors.

Provision was made for an annual school census, giving the number of children of each year of age and the number of each year of age enrolled in the public schools. These facts are of prime importance in the study of any school system.

County uniformity of text-books was adopted, certain measures taken to equalize the revenues of the different districts of the several towns, the school year changed so as to end June 30, the school age changed from 6-20 to 6-18, and other alterations made.

VIRGINIA.

[From Report for 1883-89 of State Superintendent John L. Buchanan.]

STATISTICAL SUMMARY.

| | 1887-88. | 1888-89. | Increase or decrease. |
|------------------------------------------------------------------------------------|-------------|-------------|-----------------------|
| ATTENDANCE. | | | |
| White pupils enrolled..... | 211,449 | 217,776 | I.....6,327 |
| Colored pupils enrolled..... | 118,831 | 119,172 | I.....341 |
| Whole number enrolled..... | 330,280 | 336,948 | I.....6,668 |
| White pupils in average daily attendance..... | 124,994 | 129,907 | I.....4,913 |
| Colored pupils in average daily attendance..... | 64,422 | 65,618 | I.....1,196 |
| Whole number in average daily attendance..... | 189,416 | 195,525 | I.....6,109 |
| Percentage of white school population enrolled..... | 61 | 63 | I.....2 |
| Percentage of colored school population enrolled..... | 45 | 45 | I..... |
| Percentage of white school population in average daily attendance..... | 36 | 37.5 | I.....1.5 |

| FINANCIAL STATEMENT. | | | |
| Expended for current purposes..... | \$1,389,242 | \$1,431,388 | I.....\$42,146 |
| Expended for permanent improvements..... | 169,111 | 189,421 | I.....20,310 |
| Whole amount expended..... | 1,558,353 | 1,620,809 | I.....62,456 |
| Cost of education per month per pupil enrolled..... | .70 | .70 | I..... |
| Cost of education per month per pupil in average daily attendance..... | 1.22 | 1.23 | I......01 |

The State superintendent points out some of the defects of the public schools of Virginia, not for the purpose of showing that the system is unsatisfactory, but rather to make known in what respects he thinks the schools should and can be improved. The average monthly salary of teachers, the average length of the school term, the average daily attendance per school, and the average cost of education per pupil have varied very little for several years. There has been for a number of years a gradual but constant increase in the number of schools, enrollment, average daily attendance, number of teachers, and in the expenditures for school purposes. There were 5,803 white pupils and 3,633 colored pupils supplied with text-books at public expense.

COMPULSORY SCHOOL LAWS.

It is to be regretted that the percentage of school population enrolled is so low, and especially that the average attendance is so small. In many of the counties the school term is not longer than twenty weeks. There is also great irregularity in the attend-

ance of pupils. The constitution of the State expressly permits the enactment of laws to prevent parents and guardians from allowing their children to grow up in ignorance. When it is considered how much has been spent in the erection of school buildings, and how much is annually expended for the payment of teachers' salaries and other educational purposes, and when it is considered how far the social and economical welfare of the State depends upon the education of its citizens, it seems but reasonable that some effort should be made to induce parents to grant their children the benefits of an education. Some authority will very probably be needed, because of the fact that education is least appreciated by those who stand in greatest need of it. So long, however, as public sentiment remains as it is, it would be difficult to enforce such a law.

SCHOOL FUNDS.

With the exception of a few hundred dollars, all the money expended for school purposes is raised by taxation. The whole amount was \$62,456 more than in the previous year. Nearly one-half of the school funds was derived from levies made by cities, counties, and districts. There is great need of additional funds to lengthen the school term and to increase the salaries of teachers, for it can not be expected that teachers of a high order will be content with an annual salary of \$150 or \$175; but, on account of the financial difficulties of the State, it is impossible to increase the rate of taxation, especially in the rural communities.

TEACHERS.

There are many teachers in Virginia who will compare very favorably with those in any section of our country in all that constitutes an adequate moral and intellectual equipment for the schoolroom. In intellectual force, in scholastic attainments, in general culture, in elevated personal character, in tact, energy, earnestness, and enthusiasm, and in a clear comprehension of the great ends to be reached by education, there are many entitled to high rank. There are many who, at no inconsiderable sacrifice, readily avail themselves of every means and every opportunity within their reach to improve themselves in their profession. But there is another class of teachers quite different from the one just described. Many of them are incompetent and careless, and only think of the pay to be received. It would be well if a larger number of persons who had received a collegiate or higher education than that given in the public schools were employed. At present only 1,030 out of 7,423 teachers are graduates of incorporated institutions. A collegiate education "broadens the mental horizon, gives higher ideals, elevates character, tone, and purpose." To obtain the higher education, however, requires several years of study and the outlay of considerable money. Those who have made these sacrifices can usually obtain positions paying much better salaries than those of teachers.

As States become more thickly populated and their citizens better educated the proportion of female teachers increases. The delicate sensibilities and sympathetic nature of woman render her peculiarly fitted for taking charge of small children, and it is often found that she can discharge the duties of more responsible positions equally well.

SUPERVISION.

It is a recognized fact that in many of the schools the teachers are incompetent or inexperienced, that they are unacquainted with the new and improved methods, and that the children can not there acquire high ideals of school work. It is impossible to obtain a full supply of efficient and intelligent teachers under existing conditions. There are two normal schools for white teachers and two for colored teachers, but these can not at all supply the necessary number, even if they were entirely devoted to training teachers for their special work. It is possible, however, to obtain a full supply of competent supervisors. Although some persons seem to regard the work of supervisors as of little advantage, there can be but little doubt that a capable, active, and skillful county or city superintendent can do much towards elevating and improving the schools in his charge. It is very important that he should have had some experience as a teacher himself. In counties where there are more schools than one person can supervise, inspectors might be appointed to visit a number of schools.

PHYSIOLOGY AND HYGIENE.

It is recommended that instruction in physiology and hygiene be given in the schools, as it is very important that children should know something of the structure of the human body, and how it can be kept in a condition of health and vigor. Many of the

teachers employed at present would not be qualified to give such instruction, but if it were included among the subjects of examination they would soon become acquainted with it. The instruction should not be given entirely from text-books, but by familiar talks upon important subjects connected with the preservation of health.

COURSE OF STUDY.

In some of the States there has been adopted a uniform plan for the organization and classification of ungraded schools, as well as a regular, systematic, and progressive course of studies for each grade. By this arrangement teachers can enter upon their work by a uniform plan, and there will be a continuous progression of pupils from year to year without regard to changes of teachers.

ARBOR DAY.

In twenty-six States and Territories Arbor Day is now observed, and in seven others the school officers will bring the subject to the attention of the legislatures. The observance of such a day would be of great value in different ways. Many trees would be planted about schoolhouses and at the homes of pupils, children would be instructed as to what kinds of trees it is best to plant and how to plant them; but, what is better, their attention would be called to the importance of preserving forests and to the benefits to be derived from them.

In order to afford some idea of the educational progress made in Washington, Superintendent J. H. Morgan reports the statistics of different years from 1872 to 1889; but while it may be necessary to return to that year to secure sufficiently long steps or strides in educational data to satisfy enthusiasts of Washington, whose energies are bent upon securing a fortune in the time ordinarily spent in erecting a good school building, and who expect the school system to keep pace with the rapid material progress of the newly-created State, it is only necessary to compare the statistics of 1887 with those of 1889 to satisfy conservative citizens. Even then we find that some of the most important items have doubled, and others more than doubled. In 1887 the whole amount spent for school purposes was, in round numbers, \$300,000; in 1889 it was

\$600,000. In 1887 the value of the schoolhouses was \$500,000; in 1889 it was \$1,000,000. In the same time the number of children of school age increased from 47,000 to 72,000, the enrollment from 32,000 to 46,000. As the school population and enrollment are increasing so rapidly it is necessary that the other items show a corresponding increase; otherwise there would be a retrogression in the privileges of the individual pupils. As the public-school lands are now available, a large annual income may hereafter be expected from this source.

One difficulty heretofore has been to find a sufficient number of experienced and capable teachers. Many of those who were qualified were making the position a mere stepping stone to something better, while others were not qualified. This difficulty is being rapidly overcome, however, as is shown by the report of many county superintendents that there was a scarcity of competent teachers in the early part of the year but that during the summer a great many arrived from the Eastern States. There are other ways in which this scarcity can be overcome, as the requiring teachers to attend institutes, reading school journals, refusing to issue a third-grade certificate to a person the second time, forming teachers' reading circles, and raising the standard of examinations.

The county superintendents report that the law requiring the teaching of temperance and hygiene is very fully and cheerfully complied with, but that the compulsory attendance law has no effect whatever.

CONSTITUTIONAL PROVISIONS OF THE STATE OF WASHINGTON RELATING TO EDUCATION.

ARTICLE VI.—*Elections and elective rights.*

SEC. 2. The legislature may provide that there shall be no denial of the elective franchise at any school election on account of sex.

ARTICLE IX.—*Education.*

SECTION 1. It is the paramount duty of the State to make ample provision for the education of all children residing within its borders, without distinction or preference on account of race, color, caste, or sex.

SEC. 2. The legislature shall provide for a general and uniform system of public schools. The public-school system shall include common schools and such high schools, normal schools, and technical schools as may hereafter be established. But the entire revenue derived from the common-school fund and the State tax for common schools shall be exclusively applied to the support of the common schools.

SEC. 3. The principal of the common-school fund shall remain permanent and irreducible. The said fund shall be derived from the following-named sources, to wit: Appropriations and donations by the State to this fund; donations and bequests by individuals to the State or public for common schools; the proceeds of lands and other property which revert to the State by escheat and forfeiture; the proceeds of all property granted to the State, when the purpose of the grant is not specified or is uncertain; funds accumulated in the treasury of the State for the disbursement of which provision has not been made by law; the proceeds of the sale of timber, stone, minerals, or other property from school and State lands other than those granted for specific purposes; all moneys received from persons appropriating timber, stone, minerals, or other property from school and State lands other than those granted for specific purposes, and all moneys other than rental recovered from persons trespassing on said lands; 5 per cent. of the proceeds of the sale of public lands lying within the State which shall be sold by the United States subsequent to the admission of the State into the Union, as approved by section 13 of the act of Congress enabling the admission of the State into the Union; the principal of all funds arising from the sale of lands and other property which have been and hereafter may be granted to the State for the support of common schools. The legislature may make further provisions for enlarging said fund. The interest accruing on said fund, together with all rentals and other revenues derived therefrom and from lands and other property devoted to the common-school fund, shall be exclusively applied to the current use of the common schools.

SEC. 4. All schools maintained or supported wholly or in part by the public funds shall be forever free from sectarian control or influence.

SEC. 5. All losses to the permanent common-school or any other State educational fund, which shall be occasioned by defalcation, mismanagement, or fraud of the agents or officers controlling or managing the same, shall be audited by the proper authorities of the State. The amount so audited shall be a permanent funded debt against the State in favor of the particular fund sustaining such loss, upon which not less than 6 per cent. annual interest shall be paid. The amount of liability so created shall not be counted as a part of the indebtedness authorized and limited elsewhere in this constitution.

ARTICLE XIII.—*State institutions.*

SECTION 1. Educational, reformatory, and penal institutions; those for the benefit of blind, deaf, dumb, or otherwise defective youth; for the insane or idiotic; and such other institutions as the public good may require, shall be fostered and supported by the State, subject to such regulations as may be provided by law. The regents, trustees, or commissioners of all such institutions existing at the time of the adoption of this constitution, and of such as shall thereafter be established by law, shall be appointed by the governor, by and with the advice and consent of the senate; and upon all nominations made by the governor the question shall be taken by the ayes and noes and entered upon the journal.

ARTICLE XVI.—*School and granted lands.*

SECTION 1. All the public lands granted to the State are held in trust for all the people, and none of such lands, nor any estate or interest therein, shall ever be disposed of unless the full market value of the estate or interests disposed of, to be ascertained in such manner as may be provided by law, be paid or safely secured to the State; nor shall any lands which the State holds by grant from the United States (in any case in which the manner of disposal and minimum price are so prescribed) be disposed of except in the manner and for at least the price prescribed in the grant thereof, without the consent of the United States.

SEC. 2. None of the lands granted to the State for educational purposes shall be sold otherwise than at public auction to the highest bidder. The value thereof, less the improvements, shall, before any sale, be appraised by a board of appraisers, to be provided by law. The terms of payment also to be prescribed by law, and no sale shall be valid unless the sum bid be equal to the appraised value of said land. In estimating the value of such lands for disposal, the value of improvements thereon shall be excluded: *Provided*, That the sale of all school and university land heretofore made by the commissioners of any county or the university commissioners, when the purchase price has been paid in good faith, may be confirmed by the legislature.

SEC. 3. No more than one-fourth of the land granted to the State for educational purposes shall be sold prior to January 1, 1895, and not more than one-half prior to January 1, 1905: *Provided*, That nothing herein shall be so construed as to prevent the State from selling the timber or stone off of any of the State lands in such manner and on such terms as may be prescribed by law: *And provided further*, That no sale of timber lands shall be valid unless the full value of such lands is paid or secured to the State.

SEC. 4. No more than one hundred and sixty acres of any granted lands of the State shall be offered for sale in one parcel, and all lands within the limits of any incorporated city or within two miles of the boundary of any incorporated city, where the valuation of such lands shall be found by appraisement to exceed one hundred dollars per acre, shall, before the same be sold, be platted into lots and blocks of not more than five acres in a block, and not more than one block shall be offered for sale in one parcel.

SEC. 5. None of the permanent school fund shall ever be loaned to private persons or corporations, but it may be invested in national, State, county, or municipal bonds.

WISCONSIN.

NEW LEGISLATION.

Among the laws of 1889 relating to the public schools are the following:

1. Authorizing school boards to purchase and place in each schoolroom a flag of the United States, and to provide for its preservation.
2. Authorizing the State superintendent (a) to prescribe rules for management of school libraries; (b) to publish and distribute circulars, bulletins, and courses of study for ungraded and for high schools, with needed comments thereon.
3. Amending the town-school library law; (a) authorizing town treasurers to withhold an amount equal to 10 cents for each person of school age in the town; (b) authorizing town clerks to purchase books with the money withheld by town treasurers from the school-fund income; (c) providing per diem for town clerks for time spent in connection with school libraries; (d) authorizing the State superintendent to suspend the law in any town for any year.
4. Forbidding the enumeration in school districts of any child residing in or held or cared for at any charitable or penal institution in the State, and authorizing the State superintendent to take special means to prevent such enumeration.
5. Making provision for annual distribution of 5,000 mounted railroad maps of the State among the public schools.
6. Repealing the provision requiring the school districts applying for a loan from the trust funds of the State to vote a tax equal to one-half of the loan applied for, to be collected in two years.
7. Authorizing the governor annually to designate a day to be observed as a tree-planting or Arbor Day.
8. Authorizing the State superintendent to appoint a supervisor of free high schools to assist in organizing and inspecting such schools.
9. Appropriating \$1,000 annually to maintain a summer school for teachers in connection with the University of Wisconsin.
10. Providing that the full sum of \$50,000 may be annually used in maintaining free high schools.
11. Providing for compulsory attendance at school of children between seven and fourteen years of age for at least twelve weeks annually, and relating to employment of such children.

This law is given in full on pp. 507-9.

CHAPTER XXIV.

REPORT OF THE GENERAL AGENT OF EDUCATION FOR ALASKA TO THE TERRITORIAL BOARD.

LETTER TRANSMITTING THE REPORT OF THE GENERAL AGENT TO THE COMMISSIONER
OF EDUCATION.

TERRITORIAL BOARD OF EDUCATION.

Sitka, Alaska, December 16, 1889.

SIR: The Territorial board of education in Alaska has the honor of transmitting to you the annual report for 1888-89 of the general agent of education in Alaska, with the following recommendations:

First. That the Territorial board be authorized to appoint at their discretion local school committees, and that the present methods be so changed that the local and incidental expenses of the schools can be audited by the local committees, and that salary vouchers can be paid upon the certification of the general agent, or, in his absence, of the district superintendent, that the service has been rendered according to the agreement.

Second. That the United States Commissioner of Education be recommended to contract with some missionary society for the establishment of a boarding school at Point Hope, Alaska.

Third. The Territorial board of education, at their session August 30, 1889, having recommended the appointment of a district superintendent for the Sitka district, do hereby recommend to the United States Commissioner of Education as a suitable person for that position the name of the Hon. James Sheakley, United States commissioner at Fort Wrangell, and a member of this board. And the board further recommends that his salary be \$400 per annum, together with necessary traveling expenses.

Fourth. The Territorial board of education, considering it important that the general agent should visit San Francisco and Washington for the furtherance of Alaska educational and other interests, do hereby request of the United States Commissioner of Education that his necessary traveling expenses be allowed.

Fifth. That the United States Commissioner of Education be recommended to contract with the Moravians for the establishment of a school at Togiak, Alaska.

Sixth. That the United States Commissioner of Education be recommended to establish schools and erect school buildings at Belkofsky, Yakutat, Prince William Sound, and some point on Cook's Inlet, to be hereafter selected.

By order of the board.

LYMAN E. KNAPP,
President.

SHELDON JACKSON,
Secretary.

Hon. W. T. HARRIS,
United States Commissioner of Education.

REPORT.

DEPARTMENT OF THE INTERIOR, U. S. BUREAU OF EDUCATION,
OFFICE OF GENERAL AGENT OF EDUCATION,
Sitka, Alaska, June 30, 1889.

To the TERRITORIAL BOARD OF EDUCATION:

SIRS: I have the honor of submitting the following report of the schools of Alaska for the year ending June 30, 1889:

There are in the district of Alaska fourteen day schools supported wholly by the Government, four boarding schools aided by the Government, and a number of mission schools carried on by different religious organizations.

From one of the public schools (Unga) no report has been received. The other thirteen report a total enrollment of 1,040 pupils.

From two of the contract schools no reports have been received. The other two report a total enrollment of 195.

No reports have been received from the mission schools.

It is estimated that there are 1,500 children in the schools of Alaska. The total population under twenty-one years of age is estimated at 12,000.

GOVERNMENT DAY SCHOOLS.

In the Unalaska district there is but one public school, that of Unga.

This promising school has been without a teacher for the past year.

On the 26th of May, 1888, Mr. W. A. Baker, of New Bethlehem, Pa., was appointed teacher at Unga. On the 30th of June, 1888, Mr. Baker having declined to accept, Mr. John A. Tuck, of Middleton, Conn., was appointed in his place. By the time Professor Tuck received notice of his appointment it was too late to reach San Francisco in time to take the last boat of the season for Unga.

Kodiak district.

In the Kodiak district are situated the two schools of Kodiak and Afognak.

Kodiak.—W. E. Roscoe, teacher. Total enrollment, sixty-eight. The average attendance is much larger than the preceding year and with the more regular attendance has come an increased interest in their studies on the part of the pupils.

The school is graded in accordance with the California system.

Professor Roscoe has availed himself of the preference of the children for the study of geography to combine with it lessons in language, writing, and spelling.

Frequent talks are had concerning different countries, their natural phenomena, products, people, customs, etc.

Sentence building is carefully taught from the first to the fourth reader, and the improvement in language is very rapid.

Object and picture lessons are in daily use. Spelling down and recitations are occasional amusements.

This school, like all the others, greatly needs a set of good wall maps.

It also needs a suitable school building, the erection of which has been recommended by the Territorial board of education.

Afognak.—James A. Wirth, teacher. This school has doubled, and during some months trebled the average attendance of the corresponding months of last year.

The total enrollment has increased from twenty-four to fifty-five. If the schoolroom had been larger and more comfortable there would have been a much larger increase.

Some of the boys have made such progress that they can carry on any ordinary conversation in English. This obviates the further use of the Russian and Aleut languages by the teacher.

The great drawback to the school has been the want of a comfortable room for school purposes. During the coming year I trust this difficulty may be obviated, as steps are being taken for the erection of a school building.

We greatly regret to announce that, owing to the state of his wife's health, Professor Wirth has felt compelled to tender his resignation.

By his ability as a teacher, his knowledge of the languages of the people, his tact and patience, he has overcome many of the difficulties incident to the establishment of a school in a region so remote that it has but two or three chance mails during the year, and among a people who have not yet learned to appreciate the advantages of an education. With absolutely no help from the parents, he has created such an interest among the pupils that they have attended school from the love of it.

Sitka district.

Haines.—F. F. White, teacher. Total enrollment, 128. An unusual number of heathen feasts during the winter greatly interfered with the regularity of the attendance.

It is to be hoped that the Missionary Society of the Presbyterian Church, which has good buildings at Haines, will send a missionary there at an early date. A Government teacher and a missionary working together in the large Chilkat tribe would be of great assistance to one another. The Presbyterian Board of Home Missions has given the Government the free use of their school building.

Juneau No. 1.—Miss Rhoda A. Lee, teacher. The present has been the most successful year in the history of the school. The total enrollment increased from twenty-five to thirty-six, and the average attendance from nineteen to twenty-three.

Juneau No. 2.—Miss Alice R. Hill, teacher. The total enrollment of the school decreased from sixty-seven last year to fifty-eight this. The average attendance, however, increased from twenty-seven to thirty-three. The pupils that were the most regular in their attendance and made the greatest advancement in their studies were those connected with the excellent mission home conducted by Rev. E. S. Willard and helpers. Juneau will soon need an additional building.

Dougllass City.—Mrs. Anna Moore, teacher. The enrollment numbers ninety-four as against sixty-seven for 1887-88.

The progress of the school has been more or less hindered by race prejudices.

As by far the largest attendance was by native children, the whites petitioned for a separate school for their own children. As the appropriation was too small and the number of white children too few to justify the expense of an additional teacher, an arrangement was effected and instructions issued for the white children to attend school in the forenoon and the native children in the afternoon, thus having two separate schools with but one teacher.

This did not prove a very great success (the average attendance of white children being six and a fraction), and the Territorial board of education has recommended for the coming year two teachers.

During the summer of 1888 the Society of Friends erected a good school building, the use of which has been kindly furnished the Government without cost.

Killisnoo.—Miss May Ransom, teacher. This school has moved along quietly during the year. Owing to the financial difficulties of the Fish Oil Works fewer families have remained in the place, and the consequent attendance at school has decreased.

Sitka No. 1.—Miss Mary Desha, Mr. Andrew Kashevarof, and Miss Cassia Patton, teachers. Miss Desha taught from September to January, when, receiving an appointment in the Pension Office, she resigned and removed to Washington.

Miss Cassia Patton, of Cochran, Pa., was appointed to succeed her. Mr. Andrew Kashevarof was employed from the middle of January until Miss Patton's arrival, the middle of February. Total enrollment for the year, sixty-seven. The success of the school during the year has been most gratifying to the parents of the pupils and to the friends of education generally.

Sitka No. 2.—Miss Virginia Pakle, teacher. Total enrollment, fifty-one. With an obligatory-attendance law properly enforced the enrollment ought to be 100 or more.

During the year a plain but substantial and pleasant school building has been erected at an expense of \$1,400.

Wrangel.—Miss Lyda McAvoy Thomas, teacher. Total enrollment, ninety. This model school continues to improve year by year.

Klawack.—Rev. L. W. Currie and Mrs. M. V. Currie, teachers,

The school year opened with sorrow in the death of Mr. Currie, who was the first and only teacher the school had ever had.

Mr. Currie was a native of North Carolina, a graduate of Hampden-Sidney College and Union Theological Seminary, Virginia. He gave his life to Indian education.

He did valuable work as teacher among the Choctaw Indians, and when a call came for some one to go to a remnant of Indians in Southeastern Texas that were in danger of extinction he went to them. While there his schoolhouse was burned and his life threatened. To escape the malaria incident to a long continued residence in that section he came to Alaska and took charge of the newly opened school at Klawack under circumstances of great heroism. Far away from any officer of the law he battled alone against intemperance and witchcraft. Upon one occasion four men attempted to carry away one of his pupils (a girl) on the charge of witchcraft. Mr. Currie rescued her, keeping her at his house. A few days afterwards they returned, reinforced by a party of Hydahs, on another attempt to get possession of her. While some of them vehemently claimed her, others stood near the missionary with open knives. Finally the brother of the girl was intimidated into paying a ransom for her. This Mr. Currie could not prevent, but the girl at least was saved.

Mrs. Currie, being herself a teacher of long experience, was appointed to her husband's place. Her isolation from all companionship (she was the only white woman in the place, and for eleven months looked into the faces of but two white women), the absence of any officer to enforce law or look after the peace of the community, the prevalence of drunkenness, witchcraft, and other heathen practices, greatly interfered with the efficiency of the school. This is one of the most difficult places to conduct a school in all Southeastern Alaska, and needs a strong, self-reliant, energetic man for teacher. Such a one the board of education hope to secure.

Mrs. Currie, with true Christian heroism, unflinchingly remained at her post until the close of the school year, when she resigned to return to her friends in the east.

Howkan.—Miss Clara A. Gould, teacher. This excellent school, with an enrollment of 105, continues to maintain its reputation for efficiency.

Metlakahla.—Teachers, William Duncan, with a corps of native assistants. Total enrollment, 172. This coming year Mr. Duncan confidently expects to have a boarding school for boys and another for girls under way.

SCHOOLHOUSES.

During the year a school building was erected for the use of Sitka School No. 2. Buildings have also been voted for Douglas City, Kodiak, Afognak, and Karluk.

CONTRACT SCHOOLS.

Anvik, on the Yukon River, 580 miles from St. Michael. A mission station and school supported by the Missionary Society of the Protestant Episcopal Church. Teachers, Rev. Octavius Parker and Rev. John W. Chapman.

The school being 3,844 miles from San Francisco, its post-office, and receiving but one mail a year, our latest report is dated June 1, 1888, and the statistics embodied in this report are those for 1887-88.

School opened August 1, 1887, with an average daily attendance of eight. Two boys have had sixty lessons in the first reader. Four or five other boys have broken the back of reading, and there is an army of stragglers who come in more or less frequently, and out of whom perhaps half a dozen could be drawn, boys and girls, who have a genuine and growing interest in the work of the school, and whose attendance is growing more regular. Several boys are writing in a fair, legible hand, and three can now write out their reading lessons in script without referring to a script alphabet. Two, the most advanced, aged about eleven years, can write from dictation several of the first lessons with perfect accuracy, and can now understand the meaning of the greater part of what they read, and are talking English a little. They have been taught to analyze words phonetically, and when the teacher wants native words he can get them pronounced in a scientific manner.

The total enrollment of pupils was fifty. A steam saw-mill is now en route for the mission and will be the first of the industries established in connection with the school.

Bethel, on the Kuskokwim River, 150 miles from its mouth. Teachers, Rev. John H. Killbuck and wife and Rev. E. Weber. This season Mrs. Sarah Bachman and Miss Carrie Detterer have been sent out to the same station. Mrs. Bachman is the wife of one of the bishops of the Moravian Church and goes out to spend a year in the work.

Bethel is 3,029 miles from San Francisco, its post office, and has but one mail a year.

The latest statistics received are those for 1887-88 and September, 1888. Total enrollment for 1887-88, seventeen. Largest monthly average, fifteen. Enrollment for September, 1888, nineteen boarding pupils.

This school is under the care of the Moravian Church of the United States.

The teachers experience a threefold difficulty in teaching English. First, their own limited knowledge of the native tongue, making it difficult to convey their meaning to the children; second, the absence of English-speaking people in that section; and third, the native disinclination to speak a foreign tongue.

However, the teachers are encouraged at the perceptible improvement of their pupils over last year.

Carmel, at the mouth of the Nushagak River. This school is also under the care of the Moravian Church.

Teachers, Rev. and Mrs. F. E. Wolff and Miss Mary Huber. To these has recently been added the Rev. John Herman Schoechert, of Watertown, Wis.

Although Carmel is 2,902 miles from San Francisco, its post-office, the location of several salmon canneries in the neighborhood, with the consequent arrival and departure of schooners carrying supplies, gives it several mails during the summer. Hence the school statistics of the present year have been received. Total enrollment twenty-five.

School opened on the 27th of August, 1888, with an increased attendance over last year. In order to give the children from Nushagak, Togiak, and other neighboring villages an opportunity of attending school a large barabara has been built. (This is a native sod house partly underground.) In this house the children from a distance are lodged and fed. They are allowed to go home each Friday night, returning to school on the following Monday morning.

Sitka Industrial Training School.—Under the care of the Board of Home Missions of the Presbyterian Church. Teachers and employes, Prof. Wm. A. Kelly, superintendent; Rev. Alonzo E. Austin, chaplain; Mr. H. H. Lake, boot and shoe shop, also teacher of cornet band; ———, carpenter shop; Donald Austin (native), assistant carpenter; R. E. Henning, M. D., physician; Miss Anna R. Helsey, matron of the girls; Mrs. A. E. Austin, matron of the boys; Mrs. J. G. Overend, matron of the hospital; Miss Kate Rankin, kitchen, dining room, and bakery; Miss Grace Ashby, teachers' messenger; Mrs. S. S. Winans, sewing room; Mrs. Tillie Paul (native), assistant in sewing room; ———, steam laundry; Miss Ida M. Rogers, schoolroom; Miss Carrie Delph, schoolroom; William Wells (native), interpreter; Kate, Jennie, Lottie, Ruth Albany, native assistants; Josephine, Russian interpreter. During the year the school enrolled 170 pupils, of whom 64 were girls and 106 boys.

Of the boys 17 received instruction and practice in the shoe shop, 20 in the carpenter shop, 4 in the blacksmith shop, 6 in the bakery, and several in the steam laundry.

From 25 to 30 boys have had instruction and practice in the cornet band. Two boys have been sent east to Captain Pratt's Indian School at Carlisle, Pa., one to learn the printers' trade and the other tinsmithing, and 4 of the girls of the school have been sent to Northfield, Mass., to be trained as teachers. The girls are at the expense of Mrs. Elliott F. Shepard, of New York City.

The boys in the shoeshop have made 117 pairs of boys' nailed shoes, 93 pairs of sewed shoes, 27 pairs of girls' sewed shoes, 9 pairs of fine sewed shoes for teachers and others; they also have half-soled 718 pairs of shoes, and put on 327 heels and 515 patches.

The carpenter boys have erected 4 houses, besides repairing buildings and furniture.

The boys in the steam laundry have averaged 1,000 pieces of clothing a week, and the boys in the bakery have made into good bread 900 pounds of flour per week.

Three of the boys during the winter netted a large fishing seine, and one has done some good cooping.

Arrangements are under way for the establishment of a steam sawmill and planer as one of the regular industries of the school.

Last summer visitors presented the school with 21 brass instruments, and a band was organized among the pupils.

The North Star, a small illustrated monthly paper, has been regularly published in connection with the school.

Recently, in the absence of any Government reformatory, the United States district court of Alaska, Judge Keatly presiding, placed a boy and girl in the school.

Extensive improvements have been made this summer by the boys on the grounds of the institution.

The mission board and their employes, in connection with the school, are sparing no pains or labor to increase the efficiency and usefulness of the institution, and are encouraged by a manifest advance from year to year.

The school is not only molding and lifting up the pupils directly under its care, but also their parents and friends.

It is also forming a public sentiment which indirectly helps every school in the Territory. During June, July, and August, when the steamers come crowded with tourists, all the other schools are closed for vacation, and until the visitors reach Sitka they see the native children only in their dirt and filth, so that the impression is formed that nothing can be done with them.

To correct this unfavorable judgment and demonstrate that the natives are capable of civilization and education, the superintendent of the school, upon the arrival of each steamer, sends the tourists an invitation to visit the institution. The pupils are called together for recitations, singing, and other exercises. The strangers are shown over the buildings and taken into the workrooms, etc. The result is that these visitors from every section of the land carry to their homes and tell to their friends what their eyes have seen of the progress of Alaskan children in the schools.

These testimonies create a favorable and growing public sentiment, that finds expression in the annual Congressional appropriation for education in Alaska.

OTHER SCHOOLS.

The Alaska Commercial Company, in accordance with its lease of the seal islands, maintains schools upon the islands of St. Paul and St. George. As their report is made directly to the Secretary of the Treasury, no statistics are received at this office.

The Russian Government, through the medium of the *Russo-Greek Church*, is reported as having seventeen parochial schools. These have largely been taught in the Russian language. It is said that their bishop has issued instructions to all the priests and teachers to use the English language. While for the first few years the teaching in English by teachers themselves learning the language will not be very efficient, it yet marks a step forward, and gives the promise of better things in the future.

In the annual report of the governor for 1888 it is stated that the Greek churches and parochial schools in Alaska cost the Russian Government \$30,000 annually.

The Roman Catholic Church, with headquarters and bishop's residence at Victoria, British Columbia, have a school at Juneau, and claim two in process of establishment upon the Yukon River, one at Kozzyrof, near Leatherville; and the other between Auvik and Nulato, and one at St. Michael, on Bering Sea. These are in charge of Jesuit priests.

The Church of England is reported to have a school at Nuklukahyet, on the Yukon River.

The Free Mission Society of Sweden has schools at Unalaklik, on Bering Sea, and Yakutat, at the base of Mount St. Elias. Owing to the inaccessibility of these schools and the absence of mail communications but little is known concerning them.

The Presbyterian Church of the United States, through its *Board of Home Missions*, has a flourishing day school, with a total enrollment of 155 pupils at, Hoonah.

This school is taught by Rev. and Mrs. John W. McFarland. It has also an excellent "home," with twenty-five boys and girls, at Juneau, under the admirable management of Rev. and Mrs. Eugene S. Willard, assisted by Miss Bessie Matthews and Miss Jennie Dunbar. This school is a feeder for the Industrial Training School at Sitka.

It has a second "home" at Howkan, with about twenty-five girls, in charge of Mrs. A. R. McFarland, so well and favorably known in the Church. At both of these "homes" the children are fed, clothed, cared for, and trained in household duties. For their literary training the children attend the Government day schools.

ADDITIONAL RULES ISSUED BY U. S. BUREAU OF EDUCATION.

August 15, 1888.—The governor of the Territory, the judge of the United States court, and the general agent of education in Alaska for the time being, with two other persons, to be appointed by the Secretary upon the nomination of the Commissioner of Education, shall constitute the board of education and the general agent of education shall be the secretary of said board, and shall keep the record of its proceedings. Three members shall constitute a quorum of said board.

August 15, 1888.—All missionary, boarding, or other schools conducted by private persons, or under the supervision of any of the Christian Churches, which shall receive aid and assistance from the Government, shall be subject to the visitation and inspection of the board of education, who shall have power to see that proper discipline is maintained and instruction given, and wholesome food and proper clothing and comfortable lodging furnished to the inmates of such schools.

August 15, 1888.—The board of education shall have power, and it shall be its duty, to prescribe courses of study for the several schools under its jurisdiction, and particularly to prescribe what shall be the extent and character of the industrial instruction to be given in any or all of said schools, and the teachers of said schools shall conform as nearly as practicable to the courses of study prescribed by the board. This rule shall include such schools as receive aid from the Government.

August 15, 1888.—Corporal punishment shall not be excessive, and shall be inflicted upon the pupils in attendance upon the public and other schools only in extreme cases, and then in moderation. Any teacher who shall violate this rule shall be subject to removal and loss of pay. The board of education will enforce this rule rigidly, and report all violations to the Commissioner of Education.

August 15, 1888.—Any action taken by the Territorial board of education under the preceding rules shall be subject to revision and approval of the Commissioner of Education.

July 12, 1889.—The term of the Government schools in the District of Alaska shall begin on the first school day in September and continue for the period of nine calendar months, ending on the last school day in May in each and every year, except when special provision is otherwise made.

July 12, 1889.—All schools supported by the Government shall be kept open each and every day during said period, except Saturday, Sunday, and the national holidays, which are Thanksgiving, Christmas, New Years, 22d February, and Decoration Day.

July 12, 1889.—The teachers in the Government schools will be elected for the nine calendar months of the school year, but may be suspended or removed before the expiration of said term, at the pleasure of the Territorial board of education, subject to the approval of the Commissioner of Education. Their salaries will be paid at the end of each month or every three months, as they may elect.

ADDITIONAL RULES ADOPTED BY TERRITORIAL BOARD OF EDUCATION.

October 27, 1888.—From and after this date corporal punishment in the public schools of Alaska is entirely and wholly prohibited.

All religious services are prohibited in all the public schools of Alaska except Howkau, Klawack, Metlakahtla, Fort Wrangell, Juneau No. 2, and Haines.

October 31, 1888.—The regular meetings of the board shall be held on the second Monday of January and the first Monday of June and, annually.

June 17, 1889.—The term of the public schools in the district of Alaska shall begin on the first school day in the month of September and continue for the period of nine calendar months, ending on the last school day of May in each and every year, except when special provision is otherwise made. And each school shall be kept open each and every day during said period, except Saturday, Sunday, and the national holidays, which are, Thanksgiving, Christmas, New Years, 22d of February, Decoration Day, and 4th of July. All vacations on account of sickness or other cause shall be made up at the end of the term, provided the time of such vacation does not exceed one month.

TABLE IV.—*Teachers appointed for 1889-90, with salaries.*

The board of education at its semiannual meeting, June 14 to 19, 1889, appointed, subject to the approval of the U. S. Commissioner of Education, the following persons teachers for 1889-90:

| Name. | Place. | Compensation. |
|----------------------------|----------------------|---------------|
| Miss Clara A. Gould | Howkan | *\$100 |
| H. S. Barrett, M. D. | Klawack | *80 |
| Mrs. Wm. G. Thomas | Wrangell | *100 |
| Miss Rhoda A. Lee | Juneau No. 1 | *100 |
| Miss Cassia Patton | Juneau No. 2 | *80 |
| Mrs. W. S. Adams | Douglass No. 1 | *80 |
| Charles Edwards | Douglass No. 2 | *80 |
| W. H. Reid | Haines | *80 |
| Miss Virginia Dox | Hoonah | *100 |
| Miss May Ransom | Killisnoo | *80 |
| George E. Knapp | Sitka No. 1 | *100 |
| Miss Gertrude Patton | Sitka No. 2 | *80 |
| W. E. Roscoe | Kodiak | †1,000 |
| John Duff | Afognak | †1,000 |
| John H. Carr | Unga | †1,000 |
| John A. Tuck | Unalaska | †1,000 |

* Per month.

† Per year.

TABLE V.—*Grants to contract schools.*

The board of education at its semiannual meeting, June, 1889, recommended to the U. S. Commissioner of Education the following contract boarding schools:

| | |
|--------------------------------------------|----------|
| Sitka Training and Industrial School | \$15,000 |
| Metlakatla schools | 3,000 |
| Anvik (Episcopal) | 1,000 |
| Bethel (Moravian) | 1,000 |
| Carmel (Moravian) | 1,000 |

TABLE VI.—*School buildings.*

New school buildings recommended by board of education:

| | |
|---------------|---------|
| Kodiak | \$1,200 |
| Afognak | 1,200 |
| Karluk | 1,200 |

TABLE VII.—*Estimate for the year 1890-91.*

| School. | Salary of teacher. | Salary of assistant teacher. |
|----------------------------|--------------------|------------------------------|
| Howkan | \$900 | |
| Klawack | 1,000 | |
| Wrangell | 900 | |
| Juneau No. 1 | 900 | |

Office of general agent.

The general agent at the beginning of the year, being unable to secure transportation from Sitka to the schools of western Alaska on the U. S. S. *Thetis*, that was making the trip, requested permission of the U. S. Commissioner of Education to proceed to San Francisco and take passage by the steamers of the Alaska Commercial Company. Permission not being granted, I have been unable to carry out the instructions of the honorable the Secretary of the Interior to visit all the schools at least once a year.

Indeed, for the want of transportation I have been unable to visit the schools of southwestern Alaska since I established them in 1886, and those on Bering Sea not at all. This has been greatly regretted both by myself and the teachers.

Also for want of transportation I have been unable to visit the schools at Howkan and Klawack, on Prince of Wales Island.

The schools at Sitka, Juneau, Wrangell, Douglass, Haines, and Killisnoo have been visited several times, and that of Metlakahla twice.

RECOMMENDATIONS.

I have the honor to submit the following recommendations:

1. *An inspection of the schools of western Alaska by the general agent.*—In view of the fact that I have been unable to reach those schools for three years, and as the time has come for establishing new schools in that region, some of which have already been recommended by the Territorial board of education, and as it is probable that a Government vessel will be sent next summer to that section to convey Government officials, therefore it is recommended that the U. S. Commissioner of Education be respectfully requested to arrange for the transportation of the general agent.

2. *Change in supervision.*—In order that the general agent may for the next two or three years give the larger part of his time to developing the school work in Western Alaska, I would recommend the following change in section 4, division 2, of the rules and regulations for the conduct of education in Alaska, to wit: First, that the general agent be relieved for the coming year from the local superintendency of the Sitka district, and be given the local superintendency of the Kodiak and Unalaska districts. Second, that a district superintendent be appointed for the Sitka district.

3. *Permanent school fund.*—I would again renew my recommendations of 1886-87 and 1887-88, which recommendations were also indorsed by the Territorial board of educa-

tion, that the U. S. Commissioner of Education be respectfully requested to procure legislation from Congress permanently appropriating a sum of money for the education of the children of Alaska without distinction of race.

The present method of supporting the schools of Alaska by an annual appropriation from Congress is very unsatisfactory. As Congress one year voted \$25,000 and the second nothing and the third \$15,000, it can readily be seen that neither the school board nor the teachers can arrange for the schools until after Congressional action has been taken, nor until such action is had can they be sure that there will be any schools. And not only that, but some years the action of Congress is not known in Alaska until three months after the fiscal school year commences. A failure on the part of Congress any one year to make the necessary appropriation would close the schools, scatter Government property, and throw the teachers out of employment thousands of miles away from home and friends.

The disadvantages of the present system need but to be stated to be seen.

In the Western States and Territories the general land laws of the country provide that sections 16 and 36 in each township be set apart for the use of the schools in said States and Territories. In some of the States this has been a munificent endowment.

But Alaska has no townships and no surveyed lands and no law by which they can be surveyed. And when in course of time the general land laws are extended over it, the nature of the country and the peculiar climate and the requirements of the population will prevent to any great extent the laying out of the land in sections of a mile square. Thus while no school fund is practicable for years to come from the lands, the General Government derives a regular revenue from the seal islands and other sources, a portion of which could be used in the place of the proceeds of the sale of school lands.

4. *An obligatory attendance law.*—The operation of the obligatory attendance law which was enacted by the Territorial board of education and approved by the honorable the Secretary of the Interior in 1887, has been recently suspended by order of the United States Commissioner of Education.

In view of the importance of some suitable law for securing the more regular attendance at school of the children of Alaska, the Territorial board of education at its semi-annual meeting June 14-19 took the following action:

"Whereas it is the invariable experience of all who have been engaged or interested for years in the difficult task of attempting to educate and civilize the natives and creoles of Alaska that the greatest obstacles to success are, first, the want of adequate means of securing the regular and general attendance of the children of these people at the various Government schools and, second, the stolid indifference, superstition, and fear of change on the part of the greater number of the parents of such children; and

"Whereas experience has also demonstrated that wherever native policemen have been employed and paid heretofore a moderate compensation for gathering these children into the schoolrooms and thus compelling attendance, not only is the average attendance itself largely increased, but an interest in the progress of the pupils and the success of the schools themselves has been gradually and permanently created in those native and creole parents; and

"Whereas, the Government of the United States is annually appropriating large sums of money for the purpose of educating and civilizing these people and employing competent and zealous teachers for that purpose, who are making great sacrifices by enduring severe privations, general discomfort, and personal isolation among an alien and barbarous race of people: Therefore,

Be it resolved by the Territorial board of education, That the Hon. Lyman E. Knapp, the governor of the District of Alaska, is hereby requested and urged to embody in his forthcoming annual report to the Department of the Interior the suggestions we have made herein, with the recommendation that Congress take the subject of compulsory education of the natives and creoles of Alaska into consideration, and, in addition to making the usual appropriations for the schools of the District, add thereto such enactments as will compel the regular attendance of the pupils at such schools as are already established or may be hereafter provided."

I renew my recommendations of former reports on this subject.

5. *School police.*—With the granting of an obligatory attendance law, and even without it, the appointment of a native policeman in the native villages where schools exist, whose duty shall be to see that the children are in school, will greatly increase the present attendance.

I therefore recommend that an allowance of ten or fifteen dollars per month be allowed from the school fund for the employment of such men.

6. I recommend that the honorable the Secretary of the Interior be respectfully requested to ask Congress for an appropriation of \$75,000 for education in Alaska for the year ending June 30, 1891.

7. In 1887-88 the Territorial board of education recommended to the United States

Commissioner of Education that the salary of the general agent of education be increased to \$2,400 annually.

As nothing was done, I respectfully ask the board to renew the request.

In closing this report I can not permit to pass unchallenged the statement made by the president of the Territorial board of education, which appears on page 181 of the Annual Report of the Commissioner of Education, 1887-88, that my annual report for 1887-88 was recalled by the board of education in Alaska because of "a number of material inaccuracies in the report." My report for that year was regularly indorsed and approved by the board, ex-Governor Swineford not being present, on September 15, 1888, and forwarded to the Commissioner of Education.

At a meeting of the board on October 31, 1888, four members being present, Mr. Swineford delivered a tirade against the general agent of education, claiming that some of the statements of the annual report were false and demanding that the vote of approval be reconsidered. This demand was refused by the board. The report had been officially sent to the Commissioner, and could not be recalled, or changed, if recalled, except by my consent.

However, to give Mr. Swineford an opportunity of pointing out alleged falsehoods I consented to a resolution (and without my consent the resolution could not have been passed) asking the Commissioner of Education to send the board a certified copy of the report, which was done.

The report itself was not recalled, but remained in Washington, and was printed as usual in the appendix of the annual report of the U. S. Commissioner of Education as the regular official report of schools in Alaska.

At a subsequent meeting of the board, January 23, 1889 (the general agent being absent), although a certified copy of my report had been received from Washington, it was neither read nor considered, but Judge Keatley was directed to make out a "new report and transmit the same to the Commissioner of Education."

This was not a substitute for the report of the general agent, as no one could legally make that report but himself. It was not even a report on education in Alaska, because Judge Keatley had recently come into the Territory and had no personal knowledge of its school affairs at that time. With his usual good judgment he did not attempt a report, but confined himself mainly to some general statements with regard to a few of the schools in southeastern Alaska, and particularly the training school at Sitka, of which he had some personal knowledge. His report was never submitted to the consideration of or approved by a vote of the Territorial board of education. In making his reflections upon the report of the general agent he was evidently misled by the assertions of Mr. Swineford, which were never proven, and I take this first opportunity since the publishing of the report of 1887-88 to deny that the report of the general agent for that year contains "a number of material inaccuracies."

Very truly yours,

SHELDON JACKSON,
General Agent of Education for Alaska.

CHAPTER XXV.

CITY SCHOOL SYSTEMS.

- A.—Remarks Relating to the Summary of City School Statistics and Supplementary Information—Differences in Local Organization—Reliability of School Statistics—Quantity of School Work Done in the City and in the Country Schools: The Proper Measure of School Work; Difference in the Quality of Work; Regularity of Attendance Greater in Cities; Number of Teachers and Their Salaries; Number and Value of Schoolhouses; Proportion of School Work Done by Cities (Table 1).
- B.—Remarks Relating to the Comparative Statistics, with Supplementary Information—Comparison of Statistics—Ratio of Total Enrollment to Population 6-14—Ratio of Aggregate Attendance to Population 6-14—Private and Parochial Schools; Reasons for Large Private School Attendance—Proportion of Pupils in High Schools—What Proportion of the Pupils Receive High School Instruction—Comparison of Ratios for the Last Three Years (Table 2).
- C.—Remarks and Supplementary Information Suggested by the Tables of Detailed Statistics—Number of Supervising Officers—Whole Number of Persons Employed in Instruction—Average Salary of Teachers—Text-books; Location of Cities Employing the Free Text-book System (Table 3)—The Wealth of Cities—High Schools: Number of High Schools Compared with Population; Distribution by Geographical Divisions of City Public High Schools (Table 4); Distribution by States of City Public High Schools (Table 5); Character of Instruction in High Schools; Sex of High School Graduates; Decreasing Proportion of Male Graduates; Number of Males and of Females Graduated from the High Schools of the Ten Largest Cities during 1860-64 Inclusive (Table 6); The Same during 1865-69 Inclusive (Table 7); The Same during 1885-89 Inclusive (Table 8)—Evening Schools: Falling off of Attendance; Unsatisfactory Condition of Evening Schools; A More Definite Plan Needed; The Length of the Evening School Term—Public Kindergartens: Large Cities which have avowedly Established the Kindergarten System (Table 9); Cities which have Established one or more Kindergartens, Mainly Experimental (Table 10).
- D.—Remarks Relating to the Tables of Comparative Statistics of Individual Cities.
- E.—Statistical Tables: Summary by States, of Population 6-14, Enrollment, Attendance, Teachers, High Schools, Accommodations, School Property, and Cost of Tuition (Table 11)—Summary by States of Comparative Statistics of Enrollment, Attendance, Teachers, and Accommodations (Table 12)—Summary by States of Comparative Statistics of Property and Expenditures (Table 13)—Statistics of Population and School Attendance and Enrollment in Individual Cities (Table 14)—Statistics of Supervising Officers, Teachers, Salaries, and Accommodations (Table 15)—Statistics of Public High Schools (Table 16)—Statistics of Evening Schools (Table 17)—Statistics of Property and Receipts (Table 18)—Statistics of Expenditures (Table 19)—Comparative Statistics of Enrollment, Attendance, Teachers, and Accommodations (Table 20)—Comparative Statistics of Property and Expenditures (Table 21)—List of Cities and Villages Concerning which no Information is at Hand.

A.—REMARKS RELATING TO THE SUMMARY OF STATISTICS OF CITY SCHOOLS (TABLE 11), AND INFORMATION SUPPLEMENTARY THERETO.

In the previous Reports of this Office it has been customary to include in the tables of summaries only those cities from which definite information was at hand. The table immediately following marks a departure from that method, in that it not only includes all the accurate data available, but also such estimates to supply deficiencies as may be regarded as reasonably reliable. The result desired is to secure a set of totals which will be totals in reality, and not the sum of results attained in a varying number of cities, leaving the rest unmentioned and unknown. The table is not without fault, but, inasmuch as all the cities are taken into account, it more nearly represents the sum of achievement of city schools than any similar table which has previously appeared.

The forthcoming federal census will probably show the number of cities and villages containing over 4,000 inhabitants to be somewhat greater or less than 768, the number included in the table, and if so, each item of the totals would be subject to correction. Numerous difficulties are experienced in perfecting the list of cities, and it may even now contain a few that do not possess the characteristics of cities to the extent necessary to their proper classification here, and it is equally true that some may have been omitted which have recently so grown and developed as to entitle them to be classified among urban communities.

DIFFERENCES IN LOCAL ORGANIZATION.

Such are the differences in local organization and government in the several States that the question of population is far from being the only perplexing element with which it is necessary to contend in this connection. Among the peculiarities which appear and which often involve problems of considerable difficulty may be mentioned—

1. The village of Edgewater, N. Y., which has a population of about 10,000 in two independent "towns," is in three separate postal districts, not one of which bears the name of the village, and contains four school districts which have no direct connection with each other.

2. The cities of Florida, incorporated as cities, but whose schools are managed by county officers in the same way and upon the same basis as the adjacent rural schools.

3. Some Western cities, including Denver, Colo., which embrace three entirely independent school organizations among which the territory is divided.

4. A few Southern cities, notably Washington, D. C., which contain two full sets of school officers, working side by side, in the same field, but in behalf of different races.

5. Certain New England villages, which, though containing several thousand inhabitants and important business interests, have no legal status, save as parts of the "towns" in which they are situated. Many of these villages, unincorporated and amenable to the government of "town" or township officers, contain twice the population that would be expected in the South or the West to constitute a "city," with mayor and council, board of education, and all the other embellishments of a full grown municipality.

RELIABILITY OF SCHOOL STATISTICS.

Such anomalies as these, and they are many, necessarily involve such varying methods of recording and reporting school data that it is not reasonable to hope for a strictly accurate summary of the conditions of education in all places that may be properly considered in a general way as cities, even if all forwarded reports as nearly correct as the circumstances in each case would permit. But of the 768 cities reliable statistics of 713 or 92.8 per cent. of the entire number were secured and are incorporated in Tables 14 to 19. As will be seen from the Tables referred to, many of the cities failed to report some of the items—on an average each item was omitted by probably 10 per cent. of the cities. These omissions and failures to report amount, therefore, to over one-sixth of the whole. This deficiency has been supplied by estimates based in each case upon the ratios developed by the surrounding cities or States.

In those cases in which no report was made of population excepting the estimated total, as in the cities of Pennsylvania and Minnesota, the population between six and fourteen was estimated by applying to the total population reported the ratio existing between the two at the last general census.

This explanation is given in order that the limitations to be placed upon the accuracy of the table may be fully known.

RELATIVE QUANTITY OF SCHOOL WORK DONE IN THE CITY AND IN THE COUNTRY SCHOOLS.

A comparison of the facts developed by this table with the figures shown in the tables of school statistics of States in Chapter XXII of this Report shows the importance of the city school systems in the educational field in a very strong light.

THE PROPER MEASURE OF SCHOOL WORK.

The truest measure of the quantity of work done is not the number of pupils enrolled, for that number may include those whose stay in school was too short to produce any tangible result; nor the average attendance, for that gives no idea of the time attended; nor the length of the school term, for that furnishes no clue to the number of children. The only quantity that takes all these things into consideration is what is technically called the "aggregate, or total attendance," which is determined by simply adding together the number of days every pupil was present in school. The result is the total number of days attended by all pupils, and may be said to be a measure of the total amount of instruction given.

Taking this item as the basis of comparison, it appears that 35.3 per cent., considerably over one-third, of all the instruction reported in public schools in the United States is given in cities, since the aggregate number of days' attendance on the part of all public school pupils in the entire country was 1,076,613,716, and the corresponding quantity for the cities alone was 379,800,612.

This, taken in connection with the fact that only 26.2 per cent. of the population 6 to 14, and only 22.6 per cent. of the whole enrollment are reported in the cities, shows the result of the more regular attendance and the longer school terms in the cities.

DIFFERENCE IN THE QUALITY OF WORK.

Let it be remembered that this estimate takes into consideration only the quantity of work done. A day in a "backwoods" country school is placed upon the same footing with a day in the finest school in the country. It does not, nor can it, introduce the question of quality of instruction in any way whatever. There can be little doubt that the portion of the nation's school work which the city systems do would be proved to be not far from one-half of the whole if it were possible to show on one hand the loss of time in so many rural schools by reason of frequent changes of teachers and methods of instruction, misdirected efforts and fruitless work resulting from inexperience or incompetence, lack of proper equipment and helps to teaching; and on the other hand, the advantages which accrue to the schools of the cities from close organization, skillful supervision, consultation of teachers, more or less permanent tenure of office, good houses and a fairly abundant quantity of supplies and apparatus that go far toward smoothing the rough road of instruction.

REGULARITY OF ATTENDANCE GREATER IN CITIES.

As stated above, the attendance of children enrolled is far more regular in cities than in country schools, the ratio being 71.4 per cent. in cities and 65.1 per cent. in the United States as a whole. This difference will probably never be overcome, for it is impossible in the country to reach the city standard of accessibility of schoolhouses, even if the teaching were as attractive and the buildings themselves were as favorable to regular attendance. In the matter of length of term there is more reason to hope for improvement, for in some States there is now very little difference between the city and the country schools in this respect. At present the average length of the school year is 191.6 days in the cities alone and 134.5 days in the entire country at large.

NUMBER OF TEACHERS AND THEIR SALARIES.

Only about one-seventh of the whole number of teachers in the United States are employed in city schools, but of the amount expended for teaching and supervision, 36.1 per cent. is paid by the cities. Except the showing of the approximately exact figures, nothing new is developed by this, for it is self-evident that large graded schools require a relatively small number of teachers; and it has been a matter of general regret since the inception of the public-school system that the wages paid country school-teachers are pitifully small. The greater length of the school term is also a factor which materially increases the proportion paid to city teachers.

There is very little difference in the average cost of tuition for each day's attendance of a pupil in the city and in the country, being 8.3 cents in one case and about 8.1 cents in the other. This near approach to equality is due solely to the low salaries paid in the country. If country teachers were paid at the same rate per diem as city teachers, owing to the proportionally greater number required, the average cost of one day's instruction for one pupil in the country would be about 15.9 cents, or almost twice as much as in the cities.

NUMBER AND VALUE OF SCHOOLHOUSES.

There are 216,330 schoolhouses in the United States, and only 7,670, or 3.5 per cent. of them, are in the cities—another instance of the economy possible in a dense population. In the United States, exclusive of cities, there is an average of one building to every 43 persons between 6 and 14 years of age, or one to every 29 pupils in average daily attendance in school, while in the cities the average is only one building to every 415 persons between 6 and 14, or to every 258 persons in average attendance.

The value of school property in the cities amounts to 52.8 per cent. of the whole. In other words, 7,670 buildings with their sites and furnishings are more valuable than all the remaining 208,660 houses with their grounds and equipments. Of course this is due principally to the great superiority of the city buildings in size, quality, and furnishing, but the great difference between land values in urban and rural localities affects the ratio, although it would be impossible to definitely determine to what extent.

The average value of each building, including site, furniture, etc., in the entire United States is \$1,495; in the cities it is \$25,583.

TABLE FOR COMPARISON.

For the sake of convenience in comparison, the quantities referred to in the foregoing paragraphs are reproduced in tabular form below.

TABLE 1.—*Proportion of school work done by cities.*

| | In the entire United States. | In the 768 cities. | Per cent. in the cities. |
|-----------------------------------------------|---------------------------------|-----------------------|--------------------------------|
| Population 6-14 | 12,138,199 | 3,184,326 | 26.2 |
| Public-school enrollment..... | 12,291,259 | 2,775,834 | 22.6 |
| Average attendance | 8,004,275 | 1,982,737 | 24.8 |
| Aggregate attendance | 1,076,613,716 | 379,800,612 | 35.3 |
| Number of teachers..... | 352,231 | 51,951 | 14.8 |
| Number of buildings..... | 216,330 | 7,670 | 3.5 |
| Value of school property | \$323,573,532 | \$170,640,879 | 52.8 |
| Salaries of superintendents and teachers..... | 87,888,666 | 31,709,954 | 36.1 |

B.—REMARKS RELATING TO THE COMPARATIVE STATISTICS (TABLES 12 AND 13), WITH SUPPLEMENTARY INFORMATION.

COMPARISON OF STATISTICS.

The meaning of the quantities shown in the table is brought out more clearly by the ratios and percentages in Tables 12 and 13. It is only by comparison that the full value of statistics can be realized. The comparison may be with the results attained in the same direction at a different period, or with the effects of similar efforts in other localities, or with other circumstances in the same locality which increase or limit the possibility of effective action. Then, most important of all in national statistics, comparisons may be instituted between different localities to determine the points of excellence of one over the other, taking into consideration the governing circumstances in each case, in order that the deficiencies of all may be remedied. To present opportunities for such comparisons, Tables 12 and 13 are presented. In each State the relation is shown between the principal controlling circumstances and the aggregate of results produced in all the cities reported.

RATIO OF TOTAL ENROLLMENT TO POPULATION 6-14, IN CITIES.

First, the number of children who received instruction, either in public or private schools, is compared with the whole number of children between six and fourteen years of age. South Carolina, Texas, and Kentucky make the poorest showing in this respect, each of them having less than three-fourths as many pupils enrolled in city schools as there are children of elementary school age. California, Connecticut, Illinois, Indiana, Iowa, Kansas, Massachusetts, Michigan, Nebraska, Nevada, New York, Ohio, Oregon, Rhode Island, Washington, and Wisconsin exhibit highly creditable ratios, while Colorado and Maine are so far in advance of all the other States as to create a suspicion that the school census upon which the population 6-14 was estimated contained an undue proportion of errors. Without an exhaustive examination into all the causes that produce the low and the high ratios, it may be stated that without a single exception all the States in which the percentages are noticeably low are Southern States in which there is a large negro population, whose failure or inability to take advantage of even the educational opportunities offered them is well known; and all the States mentioned as showing creditably high percentages, excepting Indiana, Iowa, and Oregon,¹ have upon their statute books laws compelling the attendance of all children in school. The compulsory laws are not, it is true, sufficiently effective to compel the attendance of those determined to remain at home, but they do exert an influence that is no less powerful for being outside the court room. Law-abiding and well-meaning people do not obey a law merely because a penalty is attached. To many of them the payment of the penalty would mean no hardship. But they respect the law simply as an expression of the public will intended for the public good, and obey it accordingly. There is no doubt that the compulsory-attendance laws often operate in this way to keep children in school when circumstances might otherwise make longer attendance a matter of doubt.

¹ Oregon has recently passed a compulsory-attendance law.

Another light in which this coincidence between the existence of high attendance ratios and compulsory laws may be viewed, even when admittedly inefficient, is that each is but an index to the favorable public sentiment toward education existing in those States; and that since both spring from the same cause, neither is due to the other.

The former explanation will be acceptable to the promoters of compulsion in education, while the latter will meet the approval of the opposing party. There is truth in both.

In the enrollment in public schools alone the States hold practically the same rank as before, the Southern States falling far in the rear, and the highest averages being produced in Colorado and Maine.

RATIO OF AGGREGATE ATTENDANCE TO POPULATION 6-14.

Column 8, however, is the best criterion presented, for it shows the relation between the aggregate attendance and the population. In this, Massachusetts leads.

The instruction given in the cities of that State was sufficient to give to each child of elementary school age 174.3 days. Maine, California, Connecticut, Nevada, Colorado, and West Virginia follow in the order named, and Florida, Mississippi, and Texas are last in the list. It will be remembered that this proportion is affected by the length of the school term, a matter in the control of the cities themselves; by the number of children brought into school, which varies with the activity of the teachers and school officers; and by the regularity of attendance, which is largely dependent upon the children and their parents. Massachusetts leads in the relative amount of school work done, because the school term is invariably long; nearly all children that could be expected to be in school are not only there, but are closely and carefully held to their work, as the high per cent. of attendance in column 6 proves. The relative amount paid to supervising officers and teachers in Massachusetts is larger than in any other Eastern State,¹ and this undoubtedly is a very important factor in accomplishing the result mentioned, for it is natural that more intelligent teachers would be attracted by the larger pay offered; the effect is seen in the record of the pupils' attendance. Another fact shown by the statistics that may be adduced as having a direct bearing upon the amount of instruction given is, that in Massachusetts the accommodations more nearly meet the requirements of the school population than in any other State, excepting Maine.

PRIVATE AND PAROCHIAL SCHOOLS.

In the matter of attendance in private and parochial schools in cities, New Hampshire and Vermont are entitled to precedence, for in the cities of each of these States over a third of the children in school are in institutions of that class.

The States showing the next largest proportion of private school enrollment in cities are Utah, Illinois, South Carolina, Maryland, Missouri, Mississippi, and Indiana, in all of which the percentage is over 25; and Kentucky, Michigan, New Jersey, New York, North Carolina, Ohio, Texas, Virginia, and Wisconsin, in which between 20 and 25 per cent. of the enrollment is in schools not under public control.

To assign as a general reason for a large private school enrollment their superiority to the public schools would be fallacious, because in many of the States included in the above category the city schools are of undoubted excellence. It would be equally unreasonable to ascribe, as has frequently been done, such a condition of things to over-organization and too much centralization in the public schools, for if this were true, Connecticut and Massachusetts, the two most thoroughly organized States in the Union, would not show such a small proportion in private schools.

The truth is that no one cause is operative in all States, and the same effect is produced by different circumstances in different localities. In New Hampshire, Vermont, and in other States the cause doubtless lies largely in the general withdrawal of Catholic children from the public schools; in many of the States of the South the public school idea has not yet attained its full measure of popularity, and in many places the population increases more rapidly than the public school facilities, and private schools reap the benefit. Insufficiency as an aid to private schools is far more potent than inefficiency, for a well-taught and conspicuously successful public school arouses a general interest in education which manifests itself first by filling the public school to its capacity and then in the increased prosperity of neighboring private educational establishments if the public school accommodations are not sufficient. On the contrary, if the instruction in the public school is indifferent—neither good nor bad, but not of the kind to arouse the enthusiasm of the pupils and maintain the interest of their parents—the private schools must rely principally for their patronage upon the more limited class

¹ See column 7, Table 13.

of people in easy financial circumstances who may be expected to patronize select schools under any ordinary conditions. Others, knowing public schools to be available without direct cost, would hesitate or refuse to incur needless extra expense, and should their interest wane on account of the failure of the public school to meet their anticipations, the result is a loss to the public school, from which the private school will derive no advantage.

PROPORTION OF PUPILS IN CITY HIGH SCHOOLS.¹

In the proportion of pupils in city high schools, Vermont, with 9.9 per cent., leads the list, and Nevada, New Hampshire, West Virginia, Wyoming, and Maine follow. The tendency of pupils to stop before completing the course is very much less pronounced in small than in large cities,² and it will be noticed that all the cities of the States just named are only of moderate size at most. This accounts in part for the superiority of the percentages shown by these States, but full credit is nevertheless due them, for in cities of the lowest class in 1887-88 the percentage of high-school pupils was 7.3, or less than that in any State mentioned except Maine.

WHAT PROPORTION OF THE PUPILS RECEIVE HIGH-SCHOOL INSTRUCTION?

No item of school statistics is misunderstood oftener than that referred to in the foregoing paragraph. Even the friends of public high schools sometimes fall into the error of considering that the percentage of pupils in the high schools at any one time represents the proportion of the children who receive high-school instruction; their opponents, similarly erring, make free use of this alleged insignificant proportion and reference to it may be found in every paper whose object is to belittle the work of public high schools.

A conspicuous use of this wholly erroneous use of statistics may be found in an entertaining little book on "Our Common School System," which emanated from the pen of a well-known lady writer a few years ago. This author presents many of the old arguments against public high schools, clothed, however, in new and attractive dress, and among them places this:

"It is true that the high school is, in theory, open to all, but actually it is only the very few who can and do take advantage of it. Of every hundred pupils who attend the lower schools, statistics show that not more than five, in many places not more than three, attend the high school. The majority get no benefit from the high schools, other than that indirect benefit which they get equally from private academies and colleges. They yet reap, indeed, disadvantage; for too often the instruction in the lower schools is shaped, not to the greatest good of the great number who are to find their only schooling in these schools, but to the demands of those who are to go into the high school. The grammar school aims to fit pupils for the high school. It shapes its course of study for the five pupils who will graduate at the high school. It ought to fit pupils for entering active life intelligent. It ought to shape its course of instruction for the ninety-five or ninety-seven who will have no course of instruction except that which the grammar schools furnish."

The same erroneous assertion is made in the same chapter to prove that we do not get the masses into the high schools after we establish them, for "the high school plucks only from 3 to 5 per cent. out of the masses to guide their studies, while the remaining ninety-five are left to regulate their own reading just as if there were no high schools at all;" and again in bewailing the "evil * * * that the best teachers, the most highly educated and most highly paid, are not put into the primary schools, where all the children have the benefit of their culture, but into the high schools, where only 3 or 5 per cent. of the children come in contact with them."

These extracts are not introduced here in order that the arguments they contain might be refuted, but merely to show an instance of the glaring misuse of statistics, the fallacy of which almost invariably escapes notice.

The ratio represented in the table shows the relative popularity of the high schools sufficiently for comparison between cities, etc.; nothing more.

If it is desired to know what per cent. of all the children enrolled receive the benefits of instruction in the high schools, it is necessary not only that those now in that department be considered, but all those yet in the elementary grades who eventually reach the high school must also be taken into the calculation.

A concrete example will make this plain. Suppose that every child in the United States were in school in that grade which corresponds to his age according to the usual classification, and that every child were annually promoted to the next higher class un-

¹ See also page 774.

² See Education Report for 1887-88, page 361, column 14.

til he completes the course, or until his death, if that should occur prior to his graduation. In such a case, taking the census of 1880 as a basis, the number in the eight elementary grades would be 9,766,696, *i. e.*, the total population between 6 and 14 years of age. At the same time there would be 3,941,365 pupils in the four high-school grades, whose ages would be from 14 to 18 years. Only 28.7 per cent. of the whole number would be in the high schools at any one time. But, according to the hypothesis, all who live long enough graduate, and "the proportion who reach the high schools" would therefore be 100 per cent. Now if 28.7 per cent. represents the high-school enrollment when *all* reach that school, 4.5, which is now the actual proportion for the United States, indicates that $\frac{4.5}{28.7}$, or 15.7 per cent. of all the pupils enrolled do actually reach the high schools.

This proportion can not be far from the correct one.

COMPARISON OF RATIOS FOR THE LAST THREE YEARS.

The statistics of cities have been presented in a form similar to that of Tables 12 and 13, in two Annual Reports prior to the one of which this is a part.

In order that the idea of comparison may be further carried out, the principal ratios developed in the cities reporting in those years are reproduced below in connection with the corresponding percentages for 1888-89.

TABLE 2.—Comparative statistics for three years of all cities from which information has been received.

| Year. | Ratio of total public and private school enrollment to population 6-14. | | Ratio of public school enrollment to population 6-14. | | Ratio of private school enrollment to total public and private school enrollment. | | Ratio of average daily attendance to— | | Average number of days' attendance of each pupil enrolled. | Aggregate attendance is equivalent to attendance of entire population 6-14 for— | Number of pupils in average daily attendance to each teacher. | Number of sittings to each 100 of average daily attendance. | Average number of sittings to a building. | Ratio of high school enrollment to total public school enrollment. | Value of school property per capita of— | | Expenditure for salaries of supervising officers and teachers per capita of— | |
|-----------|-------------------------------------------------------------------------|---------------|-------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------------|---------------------------|---------------------------------------|---------------------------|------------------------------------------------------------|---------------------------------------------------------------------------------|---------------------------------------------------------------|-------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------|-----------------------------------------|--|------------------------------------------------------------------------------|--|
| | Population 6-14. | Enrollment. | Population 6-14. | Average daily attendance. | Population 6-14. | Average daily attendance. | Population 6-14. | Average daily attendance. | | | | | | | | | | |
| | <i>Pr ct.</i> | <i>Pr ct.</i> | <i>Pr ct.</i> | <i>Pr ct.</i> | <i>Pr ct.</i> | <i>Pr ct.</i> | <i>Days.</i> | | | | | | | <i>Pr ct.</i> | | | | |
| 1886-87.. | 120.4 | 92.9 | 22.4 | 66.6 | 70.1 | 140.5 | 125.4 | 37.4 | 124.1 | 337.5 | 4.5 | \$57.23 | \$85.00 | 10.77 | \$15.96 | | | |
| 1887-88.. | 117.2 | 92.5 | 21.0 | 65.8 | 70.1 | 133.7 | 123.3 | 37.0 | 123.6 | 324.2 | 4.5 | 52.64 | 80.54 | 10.85 | 16.29 | | | |
| 1888-89.. | 109.7 | 87.2 | 20.6 | 62.2 | 71.4 | 136.9 | 119.3 | 38.1 | 127.2 | 328.5 | 4.5 | 53.59 | 86.10 | 9.99 | 16.05 | | | |

It appears, therefore, that during the period included the school population has increased more rapidly than the schools. From one-fifth greater than the population six to fourteen in 1886-87 the whole enrollment in all schools has fallen to one-tenth greater in 1888-89. In the public schools there is a smaller proportion of the population, but a slightly larger proportion of the whole enrollment, showing a gain of 1.8 per cent. upon the private institutions. In regularity of attendance there has been a gain of 1.3 per cent., and in the length of time each enrolled pupil remained in school there was an increase over last year, though the standard of 1886-87 was not reached. In the aggregate amount of instruction as compared with population six to fourteen there has been a decrease of 4 days from last year and 6.1 days from 1886-87. The proportion of enrollment in high schools is the same as the two previous years, and though the other items show slight changes they are not indicative of a general tendency either for the better or for the worse.

C.—REMARKS AND SUPPLEMENTARY STATISTICS SUGGESTED BY THE TABLES OF DETAILED STATISTICS (Nos. 14 TO 19, INCLUSIVE).

In the following tables are presented the facts necessary to a full exhibit of the educational conditions of 711 cities and villages, representing a total estimated population of 19,787,991. This number of cities is the largest that has ever been represented in the reports of this office, a fact all the more gratifying because the similar tables of previous reports included a great many New England "towns" which contain no communities sufficiently thickly settled to entitle them to be classed as "urban." This

error was due to the peculiar signification of the word "town" as it is used in New England, New York, and New Jersey. There the name is applied to a division of a county, a portion of territory corresponding very nearly to what is called in the West a "township" and in some parts of the South a "beat." In all other States the same word is commonly applied to a thickly populated community somewhat more pretentious in size than a village; to this difference in usage was probably due the improper consideration of some of the New England towns upon the same basis as cities containing the same number of inhabitants. In this report they have been eliminated as far as possible, though a few may yet remain because of the uncertainty felt regarding their exact status.

To avoid if possible any misapprehension as to the scope of these tables and to prevent incorrect returns, the word "town" is no longer employed in this connection. To indicate, however, that any assemblage of houses in which 4,000 or more persons reside may be included, whether or not designated a city by local laws, the term "village" is used, since that will not be liable to be misunderstood in any section, and will exactly apply in many States.

NUMBER OF SUPERVISING OFFICERS.

An attempt is begun in Table 15 to show the number of officers in the several cities whose time is devoted wholly or principally to supervision. Being entirely new to many correspondents as an item of statistics, the replies were not as numerous nor the information elicited as satisfactory as might have been desired, but it is hoped that the next report will show a great improvement in both respects. The question of supervision is an important one and is receiving increased attention. The relative number of supervising officers and teachers, showing the degree of the closeness of supervision, and the relative increase in the number of supervisors from year to year, showing the growth of the system of supervision, can be best exhibited by statistics.

In the table referred to 484 cities report 1,928 supervisors, or an average of 4 to each city. If this average hold good for all the 768 cities in the United States, the whole number of supervisors would be over 3,000, but it will be noticed that the majority of the cities not reporting the item are small, and in many instances the blank is undoubtedly equivalent to a cipher. It is not likely that the unreported 284 cities employ more than 400 persons who devote enough time to supervision to be properly considered supervisors. If this conjecture—it is no more—approach the truth, the whole number of supervising officers in all the cities would be not far from 2,300.

WHOLE NUMBER OF PERSONS EMPLOYED IN INSTRUCTION.

A column is also given in the same table designed to show the number of substitute teachers regularly employed, but the information it contains is even less satisfactory than that in relation to supervisors. Three hundred and thirty-nine cities report that they employ a total 1,955 substitutes. In this case, too, many of the blanks that appear may indicate a negative answer, but the item is not reported by a number of large cities in which it is known that a great many substitutes are absolutely necessary. One thousand would be a moderate estimate of the number employed but not reported; this would make the whole number of substitutes 2,955.

Now, if to the 51,981 regular class teachers reported in Table 11 we add 2,300 supervisors and 2,955 substitutes, the whole number of persons directly and continuously employed in the instruction of children in city schools is shown to be 57,236. This number is not made a part of the table of totals upon page 783 for obvious reasons, but it is given here for what it is worth.

AVERAGE SALARY OF TEACHERS.

The statistics relating to the average salaries of teachers presented in Table 15 have not proved to be as useful as it was hoped they would be. It is evident that the figures reported were not obtained according to any uniform method, and it may be doubted whether they present an altogether trustworthy basis of comparison. The information conveyed by the "average annual salary of teachers" is at best vague and uncertain, and to be of any value for statistical purposes it is necessary that it have the same signification in all cases.

TEXT-BOOKS.

In column 14, Table 15, are placed the replies to the question relating to the system of supply of text-books. Six hundred and thirty-five cities responded, 115 reporting that

the free text-book system has been adopted, 16 that books are furnished free either in certain grades or in certain studies, and 2 that books are purchased by school authorities and sold at cost to pupils. The remaining 502 replies indicate that the pupils themselves purchase their books in open market. A considerable proportion of the cities of the last class loan books free to pupils unable to buy them; 75 superintendents mention the existence of this custom, but it is known that this number does not include all the cities in which indigents are thus supplied.

The geographical location of the 115 cities in which the free text-book plan prevails is shown by the following table:

TABLE 3.—*Location and number of cities employing the free text-book system.*

| State. | Cities. | State. | Cities. |
|--------------------|---------|--------------------|---------|
| Delaware..... | 2 | New Hampshire..... | 2 |
| Illinois..... | 1 | New Jersey..... | 19 |
| Indiana..... | 1 | New York..... | 18 |
| Maine..... | 4 | Pennsylvania..... | 10 |
| Maryland..... | 1 | Rhode Island..... | 2 |
| Massachusetts..... | 48 | Virginia..... | 1 |
| Michigan..... | 1 | Wisconsin..... | 4 |
| Nebraska..... | 1 | | |

In Massachusetts a State law requires that all books be furnished by the cities and towns, and thus it happens that of all the cities reported 42 per cent. are in that State. Similar laws have since been enacted in Maine and New Hampshire. In addition to the 19 cities in New Jersey in which the free system has been adopted in full 3 cities furnish a part of the books used, and only 6 report no provision. In New York 18 of 67 cities furnish books gratuitously, 2 furnish a part, and 1 city sells them to the children at cost. In Pennsylvania 10 cities furnish all books and 3 furnish a part.

One hundred and three of the 115 cities are in the North Atlantic, 4 in the South Atlantic, and 8 in the North Central Division. The South Central and the Western Divisions are entirely without representation in the list, which includes no city south of Portsmouth, Va., and none west of Eau Claire, Wis., excepting Omaha, Nebr. It may be said, therefore, that the practical application of the free text-book idea is confined to the northeast quarter of the United States, and in the northeast quarter of that quarter are found the great mass of its supporters.

THE WEALTH OF CITIES.

One of the most important items to be considered in comparing the statistics of cities is the wealth of the city and its ability to support schools and other public institutions. To show this properly and in such a manner as to do justice to all concerned is an ever-recurring problem. The assessed value of all taxable property has been presented as an index to the cities' wealth in all previous reports and also appears in Table 18 in this volume, but it is a well-known fact that the methods of assessment differ so widely that little reliance can be placed in comparisons instituted upon such a basis.

For purposes of taxation it is immaterial whether property is assessed at its true value or any part thereof, provided that all is assessed at the same proportion of value. The rate of taxation necessary to produce a given amount of revenue will vary inversely with the assessment, but the actual amount paid upon any piece of property will be unaltered. Thus it happens that a ten-mill school tax in one city does not necessarily imply a weightier burden than a two-mill tax in another. But if no heavier taxation is shown by the higher rate, the item is worse than useless for statistical purposes, for it is misleading; and the same is true of the cause of the incongruity, the uncertain "assessed valuation." But in order that there may be some test by which a city's wealth may be judged more fairly than is possible with no other criterion than the varying assessment or the still more unreliable "estimate" as it is usually made, the form of inquiry recently sent out included a question by which the official basis of assessment in every case was obtained.

The assumption is, of course, that there is always a definite plan pursued by the assessing officers, and that their valuation represents either a fair cash value of property or some uniform part thereof. Then, the assessor's figures and the basis of assessment being given, it is a simple matter to find the true value of the property assessed. Col-

umn 3, Table 18, shows the result. The figures presented appear somewhat improbable in certain cases and the outcome is not altogether satisfactory as a whole, but even with its faults a far more equitable basis for comparison is established than has been available heretofore.

CITY HIGH SCHOOLS.¹

In Table 16 appear statistics relating to the public high schools of 660 cities.

The whole number of schools reported is 725, which number would probably be increased by about 100 if all the 768 cities were heard from.

NUMBER OF HIGH SCHOOLS COMPARED WITH POPULATION.

The following table reveals several interesting facts in relation to the 725 schools concerning which definite information is at hand:

TABLE 4.—*Distribution, by geographical divisions, of city public high schools.*

| | Number of cities reporting. | Number of public high schools reported. | Percentage of whole number reported. | Total estimated population of the cities reporting. | Ratio of number of public high schools to total estimated population of cities reporting. |
|------------------------------|-----------------------------|-----------------------------------------|--------------------------------------|-----------------------------------------------------|-------------------------------------------------------------------------------------------|
| United States | 661 | 725 | <i>Per ct.</i> 100.0 | 19,450,641 | One school to 26,828 persons. |
| North Atlantic Division..... | 247 | 265 | 36.6 | 9,236,985 | One school to 34,856 persons. |
| South Atlantic Division..... | 46 | 61 | 8.4 | 1,507,335 | One school to 24,710 persons. |
| South Central Division..... | 45 | 58 | 8.0 | 1,332,671 | One school to 22,977 persons. |
| North Central Division..... | 291 | 312 | 43.0 | 6,555,440 | One school to 21,011 persons. |
| Western Division | 31 | 29 | 4.0 | 818,210 | One school to 28,214 persons. |

High schools are relatively most numerous in the cities of the North Central Division and fewest in those of the North Atlantic Division. This does not necessarily mean that high-school advantages are more limited in the North Atlantic than in any other division, for in this, as in all other divisions but the Western, there are more schools than cities; but it is due to the fact that the cities, and consequently the schools themselves, are larger. The cities of New York and Philadelphia alone have as large a population as all the 91 cities reporting from the South Atlantic and South Central Divisions combined, yet 5 high schools suffice for New York and Philadelphia, while 109 are necessary for the 91 Southern cities.

¹ See also page 770.

The following table exhibits more in detail the location of the schools reported and their numerical relation to the total population which they are intended to serve:

TABLE 5.—*Distribution by States of city public high schools.*

| State. | Number of cities reporting. | Number of high schools reported. | Total estimated population of cities reporting. | State. | Number of cities reporting. | Number of high schools reported. | Total estimated population of cities reporting. |
|---------------------------|-----------------------------|----------------------------------|-------------------------------------------------|-------------------------|-----------------------------|----------------------------------|-------------------------------------------------|
| NORTH ATLANTIC DIVISION. | | | | Louisiana..... | 1 | 2 | 243,101 |
| Maine..... | 12 | 12 | 160,427 | Texas..... | 15 | 15 | 335,948 |
| New Hampshire..... | 7 | 7 | 111,000 | Arkansas..... | 5 | 5 | 72,500 |
| Vermont..... | 5 | 5 | 48,500 | NORTH CENTRAL DIVISION. | | | |
| Massachusetts..... | 48 | 64 | 1,424,050 | Ohio..... | 59 | 63 | 1,369,260 |
| Rhode Island..... | 6 | 6 | 204,000 | Indiana..... | 31 | 35 | 500,040 |
| Connecticut..... | 14 | 13 | 288,239 | Illinois..... | 40 | 43 | 1,278,771 |
| New York..... | 66 | 63 | 3,791,523 | Michigan..... | 35 | 35 | 649,427 |
| New Jersey..... | 22 | 19 | 796,900 | Wisconsin..... | 31 | 33 | 496,693 |
| Pennsylvania..... | 67 | 76 | 2,412,346 | Minnesota..... | 13 | 16 | 534,985 |
| SOUTH ATLANTIC DIVISION. | | | | Iowa..... | 24 | 24 | 344,887 |
| Delaware..... | 2 | 2 | 61,600 | Missouri..... | 26 | 30 | 842,065 |
| Maryland..... | 3 | 6 | 522,343 | Dakota..... | 5 | 5 | 33,201 |

| North Carolina..... | 9 | 6 | 76,000 | Montana..... | 1 | 1 | 30,000 |
| South Carolina..... | 3 | 3 | 84,357 | Wyoming..... | 1 | 1 | 8,000 |
| Georgia..... | 9 | 10 | 231,500 | Colorado..... | 5 | 5 | 85,000 |
| Florida..... | 3 | 4 | 26,000 | New Mexico..... | 0 | | |
| SOUTH CENTRAL DIVISION. | | | | Arizona..... | 1 | 1 | 10,000 |
| Kentucky..... | 9 | 12 | 298,150 | Utah..... | 2 | 1 | 49,470 |
| Tennessee..... | 6 | 11 | 203,472 | Nevada..... | 4 | 4 | 23,000 |
| Alabama..... | 5 | 8 | 126,500 | Idaho..... | 1 | 1 | 4,000 |
| Mississippi..... | 4 | 5 | 53,000 | Washington..... | 4 | 3 | 64,240 |
| | | | | Oregon..... | 1 | 1 | 37,000 |
| | | | | California..... | 11 | 11 | 507,500 |

CHARACTER OF INSTRUCTION IN HIGH SCHOOLS.

Columns 12 to 16 in Table 16 were introduced to show the character of the instruction imparted in the several schools. The information shown is not of the character to justify the formation of new opinions or startling conclusions of a general kind, for it simply brings further proof to the well-known fact that the great majority of high school students are about equally divided between the two principal courses that are practically the same the country over. For purposes of comparison between individual schools, and in judging the character of each, the columns are principally valuable.

SEX OF HIGH SCHOOL GRADUATES.

In the column showing the number of high school graduates during the year, 543 cities are reported, showing a total of 11,970 persons graduated. Of this number 3,561 are males and 7,963 are females, the sex of 446 not being reported. Of those whose sex is known 30.9 per cent. are boys and 69.1 per cent. are girls.

The small proportion of boys who finish the high school course is a matter of grave concern which is worthy of the most serious consideration, especially since it is apparent that the proportion is decreasing. This tendency is conspicuously visible in the largest cities. It may be remarked in passing that not only is the proportion of high school pupils lost in those cities,¹ but among those who do reach the highest grades boys are relatively fewer in the large than in the smaller cities. In the ten great cities named in the table below the ratio of boys to the whole number of graduates in 1889 was 25.2 per cent. 5.7 per cent. less than the same ratio for all of the cities.

¹ See column 7, Table 21, p. 309, Education Report, 1883-87, and column 14, Table 26, p. 360, Education Report, 1887-88.

DECREASING PROPORTION OF MALE GRADUATES.

To determine what has been the decrease in the relative number of males a table has been prepared, showing the number of male and of female graduates from the high schools of the ten principal cities during three periods of five years each, ending 1864, 1869, and 1889, respectively. The last period is separated from the first two by sufficient interval to show the effect of causes constantly operating; each covers time enough to avoid errors that might occur from considering results produced in a shorter time which might be the outcome of accidental, not permanent, causes; and finally, the cities taken are representatives of all sections of the country, so that the conclusions reached may not be vitiated by a suspicion that the causes are to be found in purely local conditions. Prior to 1860 the records are not sufficient for general comparisons.

TABLE 6.—Number of males and of females graduated from the high schools of the ten largest cities during 1860-64 inclusive.

| | 1860. | | 1861. | | 1862. | | 1863. | | 1864. | | Total. | | Proportion of boys to whole number. |

a Number of seniors in December, 1885.

b Increase, 6.7.

c Includes graduates of Latin schools and members of third year and advanced classes of high schools.

d Number in senior class.

e From the College of New York City.

f From the New York Normal College.

The large ratio of boys graduated during the first five years is all the more remarkable since not only did a considerable number of boys actually leave school to enlist in the military service, but it may be assumed that the absence of such numbers of men from their ordinary avocations necessitated by the civil war had the effect of increasing the demand for the services of youths of high school age both at their homes and in the industrial and business pursuits. It would have been natural to suppose, therefore, that the relative number of boys in the high schools would show an immediate increase after the disbanding of the armies, and the resumption of their places in the peaceful callings by over a million of released soldiers.

But the statistics bear witness that instead of an increase, the second five-year period shows a falling off of nearly 10 per cent., proving that the unreasonable and inexplicable custom that takes boys prematurely from the schools and puts them to work ill-prepared for its exactions was even then tightening the grip which it has held with increasing firmness ever since.

In the third period, which embraces the present time, the girl graduates outnumber the boys nearly three to one. The proportion of boys is largest in the cities of Cincinnati, Ohio, and Boston, Mass., and smallest in Brooklyn, N. Y., where the girls are more than eight times as many as the boys. The greatest decrease is noticed in St. Louis, Mo., where from two boys to one girl in 1860-64 the proportion has changed to four girls to one boy during the last period.

In Baltimore the decrease since 1865-69 is inconsiderable, and since 1860-64 there has been an actual gain. This is due principally to the establishment of the manual training school, which has annually graduated a large class of boys without affecting the popularity of the City College. A similar result may be seen in Philadelphia since the graduation of the first class from the manual training school there, for there has been no falling off in the number graduated from the Central High School, while the graduates from the special school represent a clear gain. This does not immediately justify the conclusion that the solution of the question of the small proportion of boy graduates consists in the establishment of special schools to hold those who would ordinarily leave before the completion of the course, for even if it be granted that the end justifies the means the time that has elapsed has not been sufficient to show the ultimate effect of the special schools upon the older and more orthodox institutions. But there can be no doubt that the statistics so far are favorable to the advocates of the "mechanic-arts high schools."

EVENING SCHOOLS.

The existence of evening schools is reported in 149 of the 710 cities heard from. Six cities, namely, Rockford, Ill., Plymouth, Mass., East Saginaw, Mich., Escanaba, Mich.,

Cohoes, N. Y., and Sidney, Ohio, report the discontinuance of the evening schools maintained in 1887-88; and no information is given in the reports and returns received in this office relating to such schools in Key West, Fla., Muscatine, Iowa, Peabody, Mass., Harrisburg, Pa., New Castle, Pa., Wilkes Barre, Pa., and Oshkosh, Wis., all of which reported them last year.

One hundred and thirty-four cities now on our lists were included in the evening-school table in the last Report. The number represented in Table 17 herewith is greater by fifteen, hence twenty-eight cities report evening schools this year which did not report them in 1887-88. The actual gain in the number of evening schools can not be positively stated, for it is impossible to say in how many of these twenty-eight cities this is the initial year, since some of them made no report last year, and the failure to mention evening schools in other cases may have been due simply to oversight on the part of reporting officers; this is known to be true in one or two instances.

FALLING OFF OF ATTENDANCE AT EVENING SCHOOLS.

An attempt was made to secure for this Report whatever exact data was available in relation to falling off in attendance which is a source of complaint in so many cities. No better questions for this purpose suggested themselves than those which appear at the head of columns 14 and 15 in Table 17. Though the information obtained represents but a few cities, it clearly shows the grounds for the complaint. In Chicago 9,189 pupils were enrolled during the whole six months' term; 3,461 were present at the opening and only 1,297 at the closing session. The average number of evenings' attendance of each pupil enrolled was 40, which is equivalent to three complete changes of personnel during the term. In Paterson, N. J., all but 43 of the 1,993 pupils enrolled entered at the beginning of the term and at the end of three months only one-fifth of them remained. The average of each pupil's attendance in that city was twenty-one evenings or about one month. In Pawtucket, R. I., the schools were open five months and in that time practically three different sets of pupils were instructed, the average time of attendance of each pupil being twenty-eight evenings. At Milwaukee, Wis., 1,000 pupils were present at the opening and 1,488 came in as the term grew older, but the average daily attendance was only 886 and the number at the closing session was but 660.

Mr. Donald L. Morrill, supervisor of evening schools of Chicago, thinks it "not unreasonable to suppose that one-half the number enrolled can be kept in school for the greater part of the term," and urges that "no effort be spared to attain that result at least." Even this low standard has been reached by considerably less than half the cities from which both the enrollment and daily attendance are reported, and if Mr. Morrill's further assertion be true that it is safe to assume in general that the pupil who is interested enough to come to an evening school for a few weeks will remain for a longer time if he finds he is repaid for so doing, the statistics show a woful deficiency in the general quality of evening school instruction.

UNSATISFACTORY CONDITION OF EVENING SCHOOLS.

There is, in fact, very little that affords grounds for encouragement in the general system of evening school organization as it now prevails. The day schools demand and obtain all that is best of the teaching profession, and it is a matter of pure chance if a thoroughly efficient teacher is found without permanent employment and willing to accept the hard work, poor pay, and uncertain tenure of an evening school position. As it is not considered judicious to allow day teachers to assume the extra burden of night work (though it is occasionally done), the consequence is that the care usually exercised in the selection of teachers is almost invariably relaxed when instructors for evening schools are to be appointed. The work to be done is rarely systematically laid out, and even the length of the term of each school is generally a matter left to be settled by the measure of success it attains. With a teacher picked up at haphazard and an air of uncertainty about everything connected with the school its duration is naturally very short.

It is not surprising in view of these circumstances that there is a general indifference almost amounting to contempt on the part of the people toward evening schools, and a lack of confidence in the value of the instruction they give; nor is it strange that they are termed "educational luxuries that only wealthy cities can afford" by men who undoubtedly have the best interests of public education at heart.

The plain truth is that evening schools ought to be placed upon such a basis as will enable them to do creditable work or they ought to be abolished altogether.

The latter would be a very serious mistake. The possibilities for good that they present are so great that to abandon them would be nearly as bad as to continue them in a state of inefficiency.

But how to make them efficient, that is the question. Fortunately some of the cities have enjoyed a reasonable measure of success, and one of the best ways to improve defective systems is to examine the differences between the successful and the unsuccessful and adapt to the latter those features of the former which seem to have been the efficient causes of their success. With this in view the following suggestions are made, based upon the experience of cities at least moderately successful in the management of evening schools.

A MORE DEFINITE PLAN NEEDED.

The thing which seems to be most urgently needed and which is most frequently lacking is a well-defined course of study and the careful classification which it encourages or necessitates. It is but natural that one can work to better effect and take a greater interest in doing that work when the whole task is set before him. He understands exactly what he must do to complete it and he realizes that each day and each month brings him that much nearer the accomplishment of the end he desires to gain. Should he look back he sees that progress has been made, and the consciousness that past efforts have been fruitful spurs him on to greater efforts in mastering the portion that remains. This is one of the offices of the course of study in the schools. Without it an evening school lacks a stimulus far more effective than a "dollar deposit" or a compulsory statute, for it involves motives higher than avarice or mere physical obedience to law. A course of study is as necessary to a school as a chart is to a ship. It is just as reasonable to expect a sailor to stick to a vessel drifting here and there without a port in view or definite means of reaching one as to expect a pupil to continue in a school without a plan. No matter how eager a young man may be to "get an education," his enthusiasm is apt to be intermittent and his efforts irregular and spasmodic unless his vague eagerness for "an education" can be crystallized into a desire to accomplish a certain well-defined work which will give that measure of mental development which means to him "an education."

In 1888 a systematic course of instruction was introduced in all the Boston evening schools, and the benefits that have resulted justify all that has been said above, as the following paragraph from the last report of the committee on evening schools shows:

"These courses of study have proved of the greatest benefit to the schools. The increased interest shown by the pupils in having some definite work to do and some definite end to reach has been very marked. The classifications of the pupils rendered possible under the courses of study will assist to a very great degree toward the success of these schools.

"The course of study for the evening elementary schools provides for instruction in English language, arithmetic, bookkeeping, geography, history and civil government, physiology, and hygiene."

THE LENGTH OF THE EVENING-SCHOOL TERM.

The next serious defect in the evening-school system has already been incidentally mentioned, and relates to the shortness of the time for which they are annually in session. The fact that the term is too short to offer an inducement to capable teachers is an important consideration, but it is still more important that the time is not sufficient for the instruction to result in solid acquirement or lasting benefit to even the most earnest and faithful of the pupils.

In any school teachers must become acquainted with their charges, and pupils must grow accustomed to schoolroom discipline before substantial work can be done. This is particularly true of evening schools, for their pupils are as a rule unused to restraint and do not readily adapt themselves to conditions so entirely different from their life outside the schoolroom. The time thus occupied in bringing the school down to a working basis must be considered as virtually lost, so far as actual instruction is concerned, and by so much lessens the real length of the school term. Then, if this term covers but a few weeks as is generally the case, the time for closing comes when the more earnest pupils have just begun to acquire habits of effective study and to do satisfactory work; and the little good accomplished is dissipated and the ambition aroused in the pupils is lost during their long absence from school influences. All teachers know that even in day schools in the comparatively short summer vacation of two months much of the work of the previous ten months is lost and must be repeated after the reassembling of the children in the autumn. Then, prolong the "vacation" to nine months and shorten the school term to twelve weeks and the daily session to three hours, and how much of the benefits of one term would be apparent the next? If a ten months' term is no more than ordinary day schools require for good work why should other schools be expected to perform the same kind of work satisfactorily if they have

only one-third as much time? If it is important to keep day schools open almost continuously in order that the period of youth may be utilized to the fullest extent for education, is it not more important that persons approaching maturity without having enjoyed the advantages of early instruction should have the opportunity to secure the greatest possible amount of training while they are inclined to receive it and before time and circumstances effectually put an end to all hope of further schooling?

But, it may be said, pupils can not be induced to attend even for the short time, and it would be folly to keep the schools open longer, for there would be no pupils.

Such a fear is not founded on experience. On the contrary, the statistics prove it to be groundless. In San Francisco the schools were open 193 nights, or about 10 months, and the per cent. of attendance as compared with the total enrollment was larger or not materially less than in Chicago with 117 nights; St. Paul, 120 nights; Omaha, 90 nights; Paterson, 56 nights; New York, 90 nights; Pawtucket, 94 nights; Milwaukee, 57 nights. Furthermore, the attendance the first night was less than one hundred greater than that of the last night, and the average attendance for the term was nearly the same, indicating a singular uniformity in the size of the schools throughout the year. Smaller cities that maintained evening schools through practically the whole school year were Oakland, Cal., 191 evenings; San José, Cal., 180 evenings; Salem, Mass., 180 evenings; and Providence, R. I., 190 evenings. There is nothing in the statistics of these cities to indicate that they were without pupils during the fall and summer months.

This is not incomprehensible. It is only what may be reasonably expected in any city. It is natural that a promise of a course long enough to produce substantial results will attract a class of persons who would be less likely to attend a school, lasting only three months, in which they have little or no confidence. These persons, being earnest in their desire for improvement, form the mainstay of such a school and receive the lion's share of its benefits. Others may come in for a time for no good purpose, just as in schools with shorter sessions, but being scattered through a longer time they are rarely present in considerable numbers at one time, and hence form less of a disturbing element. For the same reason the size of the school varies less, a point of advantage not to be overlooked. It may also be urged as an objection against longer terms that evening schools are more expensive than other schools, and it would cost too much to maintain them throughout the full school year. There can be no doubt that evening schools open the full time would require more money than is at present spent upon them, but is it not better to apply a hundred dollars to an effective purpose than to waste ten dollars without result, which is practically what many cities are doing? High schools, too, cost more than elementary day schools, yet no one would propose to cut down the high-school term to four or five months, and abandon them to such teachers as could be obtained for that short time, simply because they are expensive. The fact is realized that high schools are necessary, and the outlay needed to keep them at a high point of efficiency is made without a question. So it should be with evening schools. If they are necessary, they should be supported on a basis more nearly approaching that of day schools; if they are not necessary, there is no excuse for their continuance.

PUBLIC KINDERGARTENS.

The ideal relation of the kindergarten to the public-school system is that all pupils may receive one or two years of pure, or nearly pure, kindergarten instruction before entering the lowest grade of the regular primary school. In other words, the first or receiving class in all the schools should be a kindergarten. This ideal condition has not been realized so far in any city, although that is the end toward which the efforts of the last few years tend.

TABLE 9.—*The large cities which have avowedly established the kindergarten system, though not necessarily to the extent of affording instruction to all who apply.*

| City. | Number of kindergartens. | Number of instructors. | Number of different pupils enrolled. |
|-----------------------|--------------------------|------------------------|--------------------------------------|
| Boston, Mass..... | 22 | 36 | (a) |
| St. Louis, Mo..... | 639 | 156 | 6,508 |
| Philadelphia, Pa..... | 38 | 48 | 4,706 |
| Milwaukee, Wis..... | 22 | 41 | 2,650 |

a The number belonging January, 1889, was 1,074.

b Nearly all of these have "a. m." and "p. m." sessions, thus instructing two different sets of pupils.

c Estimated.

TABLE 10.—*Cities which have established one or more kindergartens, mainly experimental.*
[Those marked * probably have facilities for all who apply.]

a Eight of these are volunteers, serving without pay.

b The time is not entirely devoted to kindergarten work.

c Six regular teachers and 15 assistants.

D.—THE TABLES OF COMPARATIVE STATISTICS.

The remarks upon page 768 relating to the uses and value of the summarized tables of comparative statistics apply with equal force to tables 20 and 21. They are to the individual cities what tables 12 and 13 are to sets of cities. Naturally in these tables appear anomalies more remarkable and inequalities more noticeable than are brought out in tables 12 and 13, for the peculiarities of single cities disappear to a great extent when they are merged or combined to make an aggregate with others which do not possess the same characteristics. These wide differences are indicative of the varied conditions under which the work of education in America is conducted. There are cities of all degrees of wealth, varying from the suburban settlement of mill operatives whose whole number of taxable dollars is only 581 times as great as the number of children to be provided for, to the elegant and fashionable home for a great city's wealthy men whose aggregated ownings would be sufficient to give every resident child of elementary school age the snug sum of \$27,206. There are cities that have set aside for purely educational purposes property worth more than 5 per cent. of the value of all the taxable property they contain and cities in which the schools fare less than one-tenth as well. There are cities which pay to teachers and supervisors over \$30 for each child in attendance, and others which pay less than \$5 for similar service. There are cities which provide accommodations for nearly twice as many pupils as there are children under fourteen, and others which provide seats for less than one-third the number that would ordinarily be expected to be in school.

With such differences in not only the provision for schools, but in the ability to provide for them, it is not to be expected that the quantity and quality of work will even approach uniformity, and the generalizer who declaims of the "universal excellence of the schools of the American cities" would do well to study the statistics and revise his opinion. Are those good schools in which less than half the pupils enrolled attend regularly? Can those systems lay any just claim to excellence in which the children remain in school on an average less than five months? Yet a glance through the table shows that such schools and such systems are by no means rare.

There is still a great deal of room for improvement. We have not yet reached the point of perfection.

TABLE 11.—Summary, by States, of population 6-14, enrollment, attendance, teachers, high schools, accommodations, school property, and cost of tuition in cities and villages containing over 4,000 inhabitants.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 |

* Statistics of 1887-88.

a Destroyed by fire February 1, 1889.*b* These figures refer to the Kingston school district, which embraces only about one-half of the entire city.*c* Included also in columns 12 and 13.*d* These figures refer to the high school in West New Brighton.

e The public-school system of New York City really includes the College of the City of New York, for boys, and the Normal College for girls, but they are not under the control of the board of education as such. Each of these institutions is under the jurisdiction of a board of trustees, consisting of the board of education and the president of the college. The number of academic students enrolled in both institutions was 2,531 in 1888-89. Full statistics relating to them may be found chapter XXXVIII, table 7, and chapter XXXVI, table 5, respectively.

f The 19 students in the teachers' training course are also included in column 13.*g* Some pupils take both courses.*h* Members of the teachers' training class are not students of the high school.*i* In addition to 365 pamphlets.

b No city organization.

c Organization of schools prevented by yellow fever.

a No city school system prior to 1889-90.

CHAPTER XXVI.

SCHOOLS FOR THE TRAINING OF TEACHERS.

NOTABLE EVENTS FOR 1888-89.

NEW SCHOOLS.

In three States the legislature has provided for a new normal school. Colorado calls into existence her first school, Connecticut her second, and New York her tenth in addition to putting the sixty or seventy normal classes of the academies under the control of the State superintendent, who intends to transform them into veritable training classes for the education of teachers as far as may be done with schools having so short a session. The school at Slippery Rock, Pa., and that for colored teachers at Montgomery, Ala., have been opened under favorable circumstances.

THE COLORADO SCHOOL.

Section 1 of the act creating a State normal school in Colorado reads as follows :

"A State normal school is hereby established at or near the city of Greeley, the purpose of which shall be instruction in the science and art of teaching, with the aid of a suitable practice department, and in such branches of knowledge as shall qualify teachers for their profession : *Provided*, That a donation shall be made of a site for said State normal school, consisting of forty acres of land, with a building erected thereon, according to plans and specifications furnished by the State board of education, and to cost not less than \$25,000, \$10,000 of which shall be paid by the State, as hereinafter provided."

The school is to be under the control of a board of six trustees appointed by the governor for a term of six years, the terms of two expiring every two years, who have also general supervision, control, and direction of its funds. They appoint the faculty and fix their salaries, and with the advice and consent of the faculty prescribe the various books to be used in the school, the courses of study and instruction (which shall in no case have fewer than three years), make all needful rules and regulations, and fix the qualifications for admission.

Every applicant for admission shall undergo an examination by the faculty, and if the applicant is not of good character or fails to pass he is to be rejected. The school is open to all persons sixteen years of age or more who are residents of the State, and to nonresidents "upon payment of a rate of tuition to be fixed by the board." To enable residents to receive tuition free they must have signed (and filed with the board of trustees) a declaration "to engage in the business of teaching in the public schools of this State."

Diplomas are granted to such students as have completed the full course of instruction and have been recommended by the faculty after having passed an examination conducted by a board composed of the State superintendent of public instruction, a county superintendent of schools within the State, and the principal. When a certified copy of this has been filed in the office of the superintendent of the county wherein the holder designs to teach, the holder is licensed to teach in any of the public schools of the State.

The trustees are to make an annual report, which is to include, among other matters, "the attendance each day, the average attendance for each week and term, and during the year, the full curriculum of instruction in said school, the classification and departments thereof, the branches taught, time devoted to each, text-books and apparatus in use, requirements for admission and graduation."

In addition to the \$10,000 appropriated for buildings, an additional \$10,000 is provided by the State for furnishing them.

THE CONNECTICUT SCHOOL AT WILLIMANTIC.

The acts creating a second State normal school and locating it at Willimantic were passed in 1829. Section 1 of the organic act relates that "The State board of education shall maintain two normal schools as seminaries for training teachers in the art of instructing and governing in the public schools of the State, one of which shall be located east of the Connecticut River [the one already established being west of the Connecticut], and such sum as the State board of education may in each year deem necessary for their support, not exceeding in any year \$40,000 in the aggregate, shall be annually paid therefor from the treasury of the State on the order of the said board. The appointment and general management of teachers is under the control of State board, as also the finances.

Tuition is gratuitous and the regulations for admission and the number of pupils are fixed by the State board. The candidates for admission are selected by the school visitors of each town, and must file with the board a written declaration "that their object in securing admission to such school is to become qualified to teach in public schools, and that they intend to teach in the public schools of this State."

The State board may establish and maintain model schools.

By a subsequent act the school was located at Willimantic, and \$75,000 appropriated for its establishment. This appropriation, however, did not become available until the township of Windham had furnished a satisfactory site and had agreed to furnish "suitable and sufficient school buildings and model and practice schools in connection with the training department of said normal school."

THE NEW YORK SCHOOL AT PLATTSBURGH.

By "an act to establish a normal and training school at the village of Plattsburgh" it is related that—

SECTION 1. There shall be established at the village of Plattsburgh, in the county of Clinton, a normal and training school: *Provided, however, and upon the condition*, That within one year from the passage of this act a suitable site shall be conveyed to the State for said institution, to be approved and accepted by the commissioners. * * *

SEC. 2. Upon the acceptance of such conveyance, the superintendent of public instruction shall appoint a local board of managers for such school, consisting of not less than three persons. * * *

SEC. 3. Upon the appointment of such board of managers, there shall be erected upon such site suitable buildings for such normal and training school * * * at an expense not to exceed \$60,000.

THE TRANSFER OF THE TRAINING CLASSES IN THE ACADEMIES AND UNION SCHOOLS OF NEW YORK FROM THE MANAGEMENT OF THE BOARD OF REGENTS TO THAT OF THE STATE SUPERINTENDENT.

The board of regents of the University of New York was established in 1784, and reorganized with power to incorporate colleges and academies in 1787. The office of State superintendent was created in 1813 and abolished in 1821 and reestablished in 1854. The regents in 1834 established classes for the training of teachers in the academies, and in 1844 the deputy secretary of state having cognizance of school affairs and the regents were jointly charged with the management of the first State normal school. By the act recreating his office in 1854 the State superintendent became a member of the board of regents, and by an act of the following year that board was authorized to prescribe a course of study for teachers' classes in *academies*. The normal schools proper, with the exception of the first, have ever been under the charge of the State superintendent. In 1870 a bill making the regents subordinate to the superintendent was vetoed by the governor, since which the two educational authorities of the State have been superintending the training of teachers each in its own sphere. We have given the State superintendent's solution of the difficulty on pages 437-8 of our 1887-88 report as far as it relates to normal schools and classes. In the sequel the solution recently made by the legislature will be given. The matter is quoted from the 1890 report of the State superintendent, Mr. Draper, being his "regulations and course of study for the training classes in the academies and union schools of the State," of June 15, 1889.

"Teachers who have had experience in the instruction of training classes in the academies and union schools of the State have felt that a great advance would be attained if a uniformity of subjects pursued by these classes could be secured and a uniform standard of examination could be reached. The accomplishment of these advantages has been reached by an act of the legislature (chapter 137 of the laws of 1889), transferring the management and supervision of these classes to the superin-

tendent of public instruction. This law also enables the superintendent to harmonize the work with other instrumentalities of the State for the qualification of common-school teachers.

"In the instructions which follow, an effort has been made to secure these results. Attention is therefore called to the changes which have been made to the regulations which have been adopted and to the syllabus for uniform study and examination.

"I. *Appointments.*—To receive due consideration applications for an appointment to instruct a class should be forwarded to the department of public instruction by the 1st of July for the ensuing year. In making assignments to institutions, reference will be given to the following considerations: (1) The proper distribution of the classes among the counties of the State. (2) The location of the class to accommodate the greatest number of suitable candidates. (3) Such equipment of the institution as will give assurance of doing substantial work, both in the theory and practice of teaching. A blank form of application will be furnished to institutions requesting the same.

"The funds paid by the State for this instruction go to the management of the institution and not to any individual. Trustees [of an academy] who pay a fixed salary to their principal are requested not to allow teachers to share in this fund as an extra compensation. Where this is done it will be considered as sufficient ground for discontinuing the assignment.

"II. *Qualifications for admission.*—(1) Candidates must have attained the age of sixteen years. (2) They must subscribe in good faith to the following declaration, and the trustees, principal, and school commissioner must be satisfied that the candidates have the moral character, talents, and aptness necessary to success in teaching: 'We the subscribers, hereby declare that our object in asking admission to the training class is to prepare ourselves for teaching in the public schools of this State, and that it is our intention to become teachers.' (3) Before admission they must pass the examination for third grade license [c. p. 433, 1887-88 Report of U. S. Bu. of Ed.] under the State uniform examination; or hold the regents' preliminary certificate and a pass-card in physiology. (4) No applicant can be admitted to the privileges of the class who can not comply with all the conditions prescribed and devote the requisite time to the special work of the class.

"III. *Organization.*—(1) The class organized under the appointment must consist of not less than ten members and must be instructed for a period of not less than ten or more than thirteen weeks. Institutions will receive \$1 for each week's instruction of each member, and the whole number of weeks allowed each class must not exceed 250. * * * (2) As one term does not afford sufficient time to accomplish the amount of instruction and training desirable to meet the progressive demands of the teaching service, on that account those institutions, having ample facilities and a good record in the grade and character of the instruction, may receive an appointment to instruct two classes during the year. (3) To secure the most promising candidates the following information should be fully announced some time prior to the organization of the class: The time when the class is to be organized, conditions of membership, the character and advantages of a professional course of study, the importance of this work in securing teachers' certificates. * * * (5) Two periods of forty-five minutes each every school day must be employed in the instruction on the topics laid down in course of study. Outside of the time given for this separate instruction, such members of the class as have time and ability may be allowed to pursue such other subjects in the school curriculum as will be most profitable, for which, however, no tuition may be charged. * * *

"IV. *Course of study.*—The following course of study is prescribed upon the advice of a committee of principals representing the union schools and the academies of the State. This committee met, after consultation with the normal-school principals, and devised a plan of study which is intended to harmonize with the normal-school work and the uniform examination for teachers' certificates.

First term (1889).

The mental powers and the laws of mental development, September 9-13.
School economy, September 16-October 4.
Reading and spelling, October 7-25.
Number, October 28-November 15.
Regents' examination, November 18-22.
Examination of training class for second grade license, November 26.
Methods in form study and drawing one day each week through term.

Second term (1889-90).

History of education, December 9-20.
School law, January 6-10.
Language, January 13-31.
Primary geography, February 3-14.
Methods in physiology, February 17-28.
Examination of training class for a second grade license, March 4.
Methods in form study and drawing, one day each week through the term.

"V. *Observation and practice work.*—The above course devotes, during the first term, six weeks to the study of methods in reading, spelling, and number; and during the second term seven weeks to the study of methods in language, primary geography,

and physiology. Part of the time given to these topics must be spent in observation and practice work under the direction of the instructor of the class, acting as critic teacher. One of the considerations specially noted in granting the application was the opportunity afforded for observation and practice work, and it is insisted that these opportunities be improved. The training class must be also a practice class. In addition to receiving the methods of teaching on the authority of the instructor it is very important that the members should be trained how to observe critically and to intelligently interpret the principles of teaching by being brought in contact with the pupils in the actual work of imparting instruction. To afford this training it is expected that the critic teacher, at least twice a week, will give an opportunity to witness practical work, either by taking the class to other departments of the school to observe the work of experienced teachers, or by bringing pupils from other departments to receive from the critic teacher a model lesson. In addition, it is recommended that each member be given actual work in teaching as often as consistent with the work of the school. At a subsequent recitation let this observation and practice work be reviewed by the critic teacher, the underlying principles clearly brought out and the proper methods forcibly presented. The time devoted to the observation work, and the criticisms on the work, will be accounted part of the regular daily periods of class instruction.

"Very much depends upon the instructor of these classes whether the instruction and practice drill are of a proper grade and character. The number of graduates sent out each year from our normal schools, the departments of pedagogical study instituted in some of our colleges, and the formation of summer schools for the special purpose of studying the best methods of teaching, are ample to furnish competent and thoroughly trained teachers to take charge of the classes. Duty to the common schools demands thoroughly trained teachers for this work. If the inspector in his visitation of these classes shall find any person in charge of the instruction who is not qualified by professional study or experience to properly conduct the class, he is instructed to report the fact to the superintendent, who will annul the appointment to instruct such a class."

The superintendent gives the syllabus of the course, but as this is very minute in its directions, covering eight pages, we are obliged to refer those who desire to study it to the superintendent's report for 1890.

For the fall term of 1889, sixty-one institutions were designated to instruct a class, of which twelve failed to organize for lack of a sufficient number to satisfy the advanced requirements for admission. For the forty-nine that organized, the following statistics are given:

| | |
|---------------------------------------------------|-----|
| Male members | 160 |
| Female members | 588 |
| Total | 748 |
| Average of each class | 16 |
| Entered on regent's preliminary certificate | 421 |
| Entered on third-grade certificate | 297 |
| Held second-grade certificate | 58 |
| Have taught | 170 |

The above figures show a diminished attendance as compared with the operation of these classes under the former order of things; but "a very gratifying advance in the grade of scholarship and the general maturity of the membership." The loss in attendance is attributed by the inspector, Professor Hawkins, to the advance in the standard for admission, the increased time demanded for study, and the greater ease in obtaining a second-grade certificate by examination immediately than by going through the course in order to obtain it.

STUDENTS UNDER TRAINING FOR TEACHING IN CITIES.

In cities normal schools, departments, or classes, are being so rapidly established and in such different ways that it is hard to keep up with the increase or even to tell where it is occurring. The following table will show the number of students in cities of 4,000 and over:

TABLE 1.—*Statistics of training schools and classes, for the most part connected with city high schools, in cities with 4,000 inhabitants and over for 1888-89.*

| City. | Stu- dents. | City. | Stu- dents. |
|------------------------------------|----------------|----------------------|----------------|
| Santa Cruz, Cal. | 5 | Fulton, N. Y. | 37 |
| Grand Forks, Dak. | 8 | Hornellsville, N. Y. | 12 |
| Galesburgh, Ill. | 6 | Ithaca, N. Y. | 27 |
| Moline, Ill. | 10 | Jamestown, N. Y. | 37 |
| Burlington, Iowa | 13 | Kingston, N. Y. | 25 |
| Cedar Rapids, Iowa | 12 | Malone, N. Y. | 31 |
| Davenport, Iowa. | 13 | Norwich, N. Y. | 20 |
| Oskaloosa, Iowa | 11 | Olean, N. Y. | 19 |
| Emporia, Kans. | 6 | Plattsburgh, N. Y. | 23 |
| Clinton, Mass. | 12 | Port Jervis, N. Y. | 10 |
| North Adams, Mass. | 6 | Columbus, Ohio. | 29 |
| Adrian, Mich. | 4 | Ironton, Ohio | 6 |

STATISTICS OF NORMAL SCHOOLS AS REPORTED FOR 1888-89.

Until 1887 the questions asked on the blank forms of inquiry annually sent out by this Bureau regarding the scholastic character of the attendance at the normal schools of the country were these:

9. Number of different normal students in attendance during the last school year: Male, —; female, —.
10. Number of other students of secondary or high-school grade in attendance during the last school year: b Male, —; female, —.
11. Is there a model school attached to the institution? —

In the following year (1888) the form was changed to enable the Bureau to ascertain what number were actually being trained for teaching. The inquiry as to attendance was now couched in the following terms:

5. Number of different students enrolled within the year: * Male, —; female, —; total, —.
7. Number in teachers' training course: Male, —; female, —; total, —.
8. Average daily attendance of normal pupils: Male, —; female, —; total, —.
9. Number below the academic or high-school grade: c Male, —; female, —; total, —.
11. Number receiving special training for kindergartens, —.
12. Number in commercial course: Male, —; female, —; total, —.
13. Number of pupils taught in practice training school, —.

a By referring to p. 956 it will be seen that for the first session 1889-90, 748 pupils were enrolled in the teachers' training classes in the academies and union schools of New York, a decrease. The statistics of the above table are for 1888-89; but of the 424 students in the North Atlantic Division, only 309 are for New York. In other words, it must be remembered that the statistics of the above table are for cities of 4,000 inhabitants and over.

b The answer to this question should not include students in the model department when such students are below the secondary or high-school grade.

c Not including pupils in practice training school.

Nor was this satisfactory. The answer to the eighth inquiry was frequently larger than the answer to the seventh, and the seventh and the thirteenth were sometimes taken to be the same inquiry in different terms. In the inquiry for the following year an attempt was made to bring these questions into a series, thus:

7. Number of students—

- (a) In the science and art of teaching: Male, _____; female, _____; total, _____.
- (b) In academic or high school studies: Male, _____; female, _____; total, _____.
- (c) In kindergarten methods: male, _____; female, _____; total, _____.
- (d) In commercial course: Male, _____; female, _____; total, _____.
- (e) In other departments: Male, _____; female, _____; total, _____.
- (f) Entire number, counting none twice: Male, _____; female, _____; total, _____.

This seems to have answered very well, but there are two objections to it. In the first place, *a* and *b* are not mutually exclusive, and in the second, each correspondent is left to interpret the meaning of the expression "the science and art of teaching" for himself. To come to some approximate knowledge of what meaning each placed on this term a number of questions were asked on the last page of the form of inquiry. What these questions were, and the answers to them, have already been given in Chapter XIII. In the following summary the answers to *a*, *b*, and *c* of the last scheme above are given by the side of the more important columns showing the number of pupils reported in the science and art of education. In some cases, however, it was impossible to exclude the replies to *d*, and, in two or three cases, to *e*.

PUBLIC NORMAL SCHOOLS.

Attendance.—During 1888-89 it appears from the following table that 23,618 persons were pursuing a course of study in the science and art of teaching in the 129 schools which report themselves as having such students. Of these students 71 in every hundred were women, a slight increase over the percentage of 1887-88, when 112 schools reported themselves as having students in a "teachers' training class." If we divide the number of students in the science and art of teaching by the number of schools reporting themselves as having such students during 1888-89 we find that for the year under review (1888-89) there were 175 students to each of the 129 schools reporting. For 1887-88 there were but 154 to each of the 112 schools reporting for that year.

During the year under review there were 28,092 pupils in 124 schools whose statistics may be used, or 228 students to each school. During the preceding year there were 243 students to the 133 schools whose statistics were used. In the 123 schools for 1888-89, 70 per cent. of the attendance were women, a slight increase over the percentage of 1887-88, when it was 69 per cent.

Twenty schools report 1,216 students under kindergarten training, and 56 report 8,370 students in secondary studies, but in some cases these secondary students appear to have been included also in the science and art of teaching course.

TABLE 2.—*Teachers and pupils in public normal schools. (Summary of similar columns of Table 5.)*

| State. | Number of schools. | Instructors. | | | Pupils (academic and professional). | | | | | | |
|----------------------------|--------------------|-------------------------|---------|---------|-------------------------------------|---------------|---------|--------------------------------------|---------------|---------|------------|

| Total | 138 | 136 | (7) 546 | 922 | 124 | (2,709) 7,518 | 17,883 | 129 | (1,996) 5,989 | 14,633 | 4,564 |

Income.—The income from public sources considered as a total for the whole country shows but a small increase. The receipts from other sources given in the following table can not be compared with the total of a similar column in the report preceding this. In that the general question was asked, "Aid from other sources received within the year?" and the answers tabulated. In the present report the Bureau has computed the item from data given in answer to a series of questions. The amount expended for building and repairs is a new item and in several cases is included in one of the two other columns of Table 3. It will be observed that *prima facie* about one-third of the amount received was expended in buildings and repairs, but the fallacy of such figuring is easily shown by taking the case of the new school at Chico where the appropriation was \$29,000, while the amount expended on buildings was \$100,000. The State normal school at Framingham, Mass., expended \$115,000, and the new school at Oneonta, N. Y., \$114,000; in the case of the Massachusetts school the appropriation for the year was \$14,000, while no appropriation for the year 1888-89 seems to have been made for the New York school.

TABLE 3.—*Aid from public funds and other sources (summary of similar columns of Table 6).*

| | From State, county, or city. | From other sources. | Expended during year for building and repairs. |
|----------------------|------------------------------------|------------------------|---------------------------------------------------------|
| Alabama | \$27, 075 | \$12, 605 | \$6, 511 |
| Arizona | 6, 000 | 0 | 0 |

g \$600 interest on invested funds.

The New York College for the Training of Teachers, New York City.—Provisionally the statistics of this college have been inserted in the table of private normal schools though they have not been included in the summary of that table following the precedent of the Bureau's report for 1887-'88.

PRIVATE NORMAL SCHOOLS.

Eighteen private normal schools report in all 1,324 students in secondary studies, 4 collectively report 74 students under kindergarten instruction, and 13 report 694 students in a commercial course. In answer to the inquiry as to the number of students in "other departments," 15 schools report 1,149 students. In the summary that follows, 1,323 students do not appear, as the principals of the schools reporting them were unable to classify them according to our scheme; nor has the number of commercial students been included in the figures of the following table. From these schools 315 normal pupils were graduated during the year.

TABLE 4.—*Teachers and pupils in private normal schools (summary of similar columns of Table 7).*

* For 1887-88.

a The majority of the students (in all 141) take the normal course.

b The president, unable to make the distinction necessary to fill our form of inquiry, returns the whole number of pupils in his school, 714 male, 322 female students. These figures are for 1887-88. The principal, in making the return of pupils in attendance for 1887-88, makes no classification, merely giving the number as 72 male and 88 female students.

c Not recorded. The whole number of male students in the school is 112 of female students, 63.

d Among these were 6 graduates of colleges and 12 graduates of normal schools.

e This may include respectively 40 male and 30 female students in the commercial course.

a Charge for a month.

CHAPTER XXVIII.

SUPERIOR AND PROFESSIONAL INSTRUCTION.

I.—COLLEGES FOR WOMEN.

The separation of this class of institutions into two divisions has been found to work quite successfully. It is hoped that a greater number of institutions will gradually raise their standards sufficiently to be included in Division A of Table 2. The only one that has been added to this division since the publication of the Report for 1887-88 is Mount Holyoke Seminary and College, South Hadley, Mass., which has lately been granted a charter, and now possesses full collegiate powers.

The number of institutions included in Table 2 is 198, which is 9 less than were reported in 1887-88. This decrease in numbers is due, very likely, to failure on the part of these institutions to report their statistics.

Tables 1 and 2 present the summarized and detailed statistics of these institutions.

TABLE 1.—Summary of statistics of institutions for the higher instruction of women for 1888-89.

| States. | Number of schools. | | Number of instructors. | | Students. | | | | Number of volumes in libraries. | Value of scientific apparatus. | Value of grounds and buildings. | Amount of productive funds. | Income from productive funds. | Receipts from tuition fees. | Total income. | Benefactions. | |

* Statistics of 1887-88.

a Includes board.

II.—COLLEGES AND UNIVERSITIES.

The number of colleges and universities in the United States is constantly increasing, and this year the number reporting to this Office is larger than ever before. The general plan of presenting the statistics of these institutions does not differ from the plan followed in the preceding report.

Table 3 presents the statistics, somewhat condensed, of a group of institutions

TABLE 3.—*Statistics of foundations comprising groups*

| Name and location. | | College of arts and science. | | Schools of science, pure and applied. | | | | Professional schools. | | | Total number of instructors without duplication. | Total number of students without duplication. | Number of endowed professorships. | Number of fellowships. |

* Statistics of 1887-88.

a Includes 7 instructors in the preparatory department.

b Includes 81 students in the preparatory department.

which, together with certain of the State universities, Table 4, approach more nearly to the idea of true universities than any other institutions in the country. Nearly all of them provide fellowships, two-thirds of the entire number of fellowships belonging to such foundations being owned by them. They are also liberally provided with scholarships and productive funds, at least 43 per cent. of the total amount of productive funds reported by colleges and universities being possessed by these institutions.

of related faculties, colleges, or schools, for 1888-89.

| Number of State scholarships. | Number of other scholarships. | Number of volumes in libraries. | Value of scientific apparatus. | Value of grounds and buildings. | Amount of productive funds. | Income from productive funds. | Receipts from tuition fees. | Total income. | Benefactions. | Other schools. |

b Two of these are but partially endowed.

a Partially.

* Statistics of 1887-88.

III.—SCHOOLS OF SCIENCE.

SCHOOLS OF SCIENCE ENDOWED BY THE NATIONAL LAND GRANT.

Only thirty-two of the forty-eight schools properly reported under this head appear in Table 13. Of the other sixteen schools, the South Georgia College of Agriculture and Mechanic Arts at Thomasville, Ga., has made no report to this Office since 1885-86, and does therefore not appear in the table. The College of Agriculture and Mechanic Arts of the University of North Carolina has been abolished and a new school, the North Carolina College of Agriculture and Mechanic Arts has been located at Raleigh, under the presidency of Alexander Q. Holliday. No report was received from it, as its first session begins on October 3, 1889. The remaining fourteen schools are so closely united with the institutions of which they are departments that it is impossible to separate the work and funds without duplication, so that the statistics of these schools are reported in Table 7, with the institutions to which they belong.

Remarks on Table 8.—From the summary given in Table 8, it appears that the total number of professors and instructors reported by the thirty-two schools was 670, which is an increase of 8.06 per cent. over the number reported in 1887-88, while the increase in the number of students is 18.38 per cent. The total income reported by these schools is \$1,407,242, of which amount 37.4 per cent. was derived from State or municipal appropriations, 40.95 per cent. from productive funds, and 15.98 per cent. from tuition fees, leaving a small portion unaccounted for. Comparing these percentages with the corresponding percentages of the previous year, we find that the percentage of income derived from appropriations in 1888-89 exceeds that for 1887-88 by 4.47 per cent., and that for 1886-87 by 4.45 per cent.

Of the total amount received from tuition fees, 68.96 per cent. is reported by the Massachusetts Institute of Technology, and 17.11 per cent. by Cornell University, while the remaining 13.93 per cent. is distributed in small amounts among thirteen institutions.

The number of institutions of this class maintaining preparatory departments is constantly decreasing, thus affording more time and means to the instruction in collegiate branches. The Maryland Agricultural College, in its catalogue for 1888-89, states that the public educational facilities are believed to be such in all parts of the State as to render it unnecessary for the college to maintain a preparatory department.

TABLE 8.—*Summary of statistics of schools of science endowed by the national land grant for 1888-89.—PART I.*

[illegible]

PROGRESS IN FIVE YEARS.

In the report for 1887-88 an attempt was made to show the ratio of increase in the instructors, students, and productive funds of the land-grant colleges in 5 years. As these ratios virtually represent the entire growth of the schools, a similar scheme of tabulation (Table 9) has been prepared for this report, taking for basis the information received in the years 1883-84 and 1888-89.

The greatest ratio of increase in instructors is reported by Purdue University, in which institution the increase is 200 per cent. The decrease in the number of students in the five institutions reporting a decrease is due, very probably, to the reorganization of the institutions.

TABLE 9.—*Showing, for the colleges endowed with the national land grant, the percentage of increase or of decrease in instructors, students, and productive funds in 1888-89, as compared with 1883-84, according to returns made to this Office.*

DISTRIBUTION OF STUDENTS IN PRACTICAL WORK.

Table 10 represents, as far as possible, the distribution of students of the land-grant colleges in the various lines of practical work afforded by the institutions. This representation is very incomplete, owing to the failure of many of the institutions to answer the inquiries on this subject. The table is an important one, for it shows not only the extent to which students avail themselves of the opportunities for practical training afforded them, but, taken in connection with similar tables in previous reports, it shows in which of these lines of practical work the institutions are developing most rapidly.

The general tendency of the work of these schools can only be determined by examining the ratios of the individual schools for the successive years. Ratios for the entire country, formed by using only the totals here given, would not be a fair representation for the entire country for two reasons: First, because several of the schools are not included in the representation; second, because the practical work of the schools is necessarily and properly determined by local conditions, for which reason the figures lose their significance when merged into a general sum.

The question relating to military tactics was answered as fully as could be expected. Of the total number of students in the schools answering this inquiry, 52.91 per cent. were engaged in military drill during the year. This is a very good showing when we take into consideration that of the total number of students in the same schools 17.12 per cent. are females.

a All the students in course take field and garden work, surveying, and laboratory.

DISTRIBUTION OF STUDENTS IN DEGREE COURSES.

Table 11 shows the distribution of students in the several degree courses of the land-grant colleges so far as reported. Omitting the schools not reporting this particular we find that 51.3 per cent. of the total number are in courses leading to the B. S. degree, 5.12 per cent. are in the A. B. degree, 3.87 per cent. in the B. L. course, 6.01 per cent. in the C. E. course, 2.96 per cent. in the M. E. course, 0.8 per cent. in the veterinary medical course, 0.61 per cent. in the Ph. G. course, and 9.94 per cent. in other first degree courses, leaving 19.39 per cent. not distributed in degree courses.

With few exceptions the schools included in Table 11 are purely scientific or technical in character, which accounts for the large proportion of students in scientific and technical courses. Five schools only report students in the A. B. course, one reports students in the B. L. course, while Cornell University reports students in both A. B. and B. L. courses.

OCCUPATIONS OF GRADUATES OF SCHOOLS OF SCIENCE.

The question is frequently asked, "What proportion of the graduates of the land-grant colleges are engaged in agriculture and the mechanic arts?" The endeavor is here made to present in tabular form the data bearing upon this inquiry. Considerable difficulty has been experienced in collecting the required statistics, as many of the institutions do not publish a list of their alumni, while some publish a list without giving the occupations; altogether 14 land-grant institutions are included in the scheme (Table 12).

The total number of living graduates of these 14 institutions is 4,261, of which number the occupations of 417 are unknown, leaving 3,844 to be accounted for. Perhaps it would be well to note that a large proportion of those included under the head "unknown" are reported as being with manufacturing companies, railroads, etc., but no definite occupation is mentioned. Of the total number distributed 1,691 or 44 per cent. of the graduates are engaged in agriculture and mechanic arts or in occupations allied to them. Taking the table in detail we find that 8.3 per cent. are engaged in farming, 6.06 per cent. in land-grant colleges and agricultural experiment stations, 14.75 per cent. are engaged in engineering; 2.45 per cent. in architecture, 2.89 per cent. in manufactures, 2.16 per cent. as chemists, 1.93 per cent. as superintendents, 1.59 per cent. as draughtsmen, 1.48 per cent. as professors in colleges, 1.53 per cent. as editors, 4.84 per cent. as physicians, 1.53 per cent. as clergymen, 3.77 per cent. are students, 10.33 per cent. are teachers, including superintendents of schools, 11.29 per cent. are lawyers, and 9.29 per cent. are in business, leaving 15.81 per cent. distributed in several other occupations.

Considering the second part of the table, *i. e.*, those schools not endowed by the land grant, we find the total number of graduates is 1,999, of whom only 56.78 per cent. are engaged in technical occupations. Taking into consideration the fact that, with one exception, all the institutions included in the second part of the table are purely technological schools, and that five of the institutions in the first part of the table also maintain classical and literary courses of study, the showing made by the latter class is very good in comparison with that of the technological schools not endowed by the land grant.

TABLE 12.—Showing the occupations of graduates of land-grant colleges and technological schools.

| 32 | Hampton Normal and Agricultural Institute. | | | | | | | | | | | | | | | | |

^a Includes an appropriation of \$50,000 for college building. The college also received \$30,000 on insurance policies of burned building.

^b Free tuition.

^c Includes \$15,000 for experiment station.

^d From incidental fees.

^e For non-residents.

^f For buildings.
